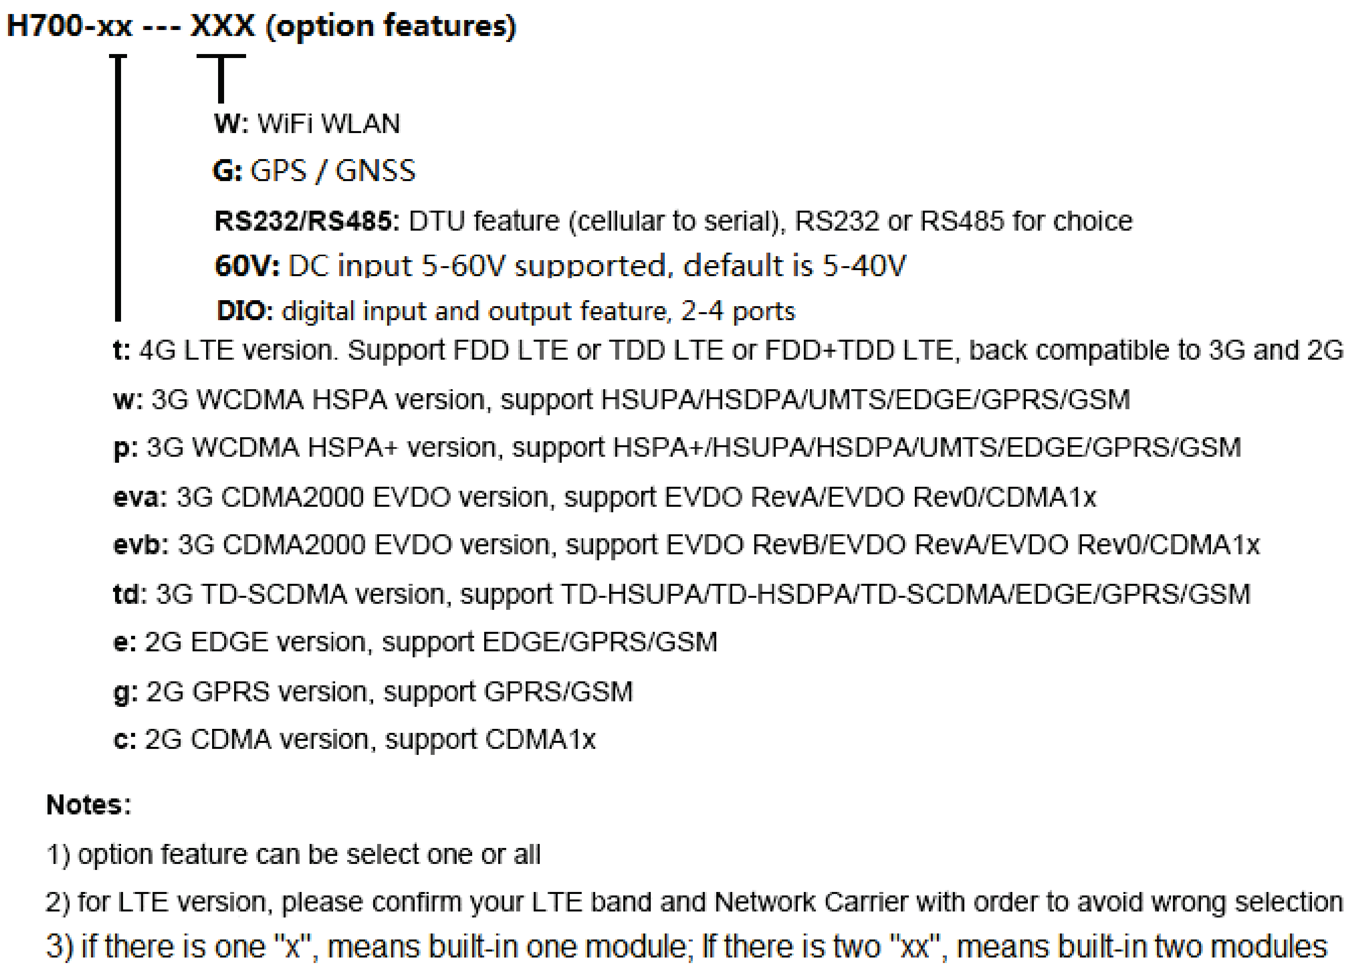
Content

Chapter 1

1 Preparation job before configuration

1.1 Learn your router version and feature

1) H700 series contains different version and option feature. Please learn it before using it.
H700 series defines the model as follows,



H700-xx --- XXX (option features)

W: WiFi WLAN

G: GPS / GNSS

RS232/RS485: DTU feature (cellular to serial), RS232 or RS485 for choice

60V: DC input 5-60V supported, default is 5-40V

DIO: digital input and output feature, 2-4 ports

t: 4G LTE version. Support FDD LTE or TDD LTE or FDD+TDD LTE, back compatible to 3G and 2G

w: 3G WCDMA HSPA version, support HSUPA/HSDPA/UMTS/EDGE/GPRS/GSM

p: 3G WCDMA HSPA+ version, support HSPA+/HSUPA/HSDPA/UMTS/EDGE/GPRS/GSM

eva: 3G CDMA2000 EVDO version, support EVDO RevA/EVDO Rev0/CDMA1x

evb: 3G CDMA2000 EVDO version, support EVDO RevB/EVDO RevA/EVDO Rev0/CDMA1x

td: 3G TD-SCDMA version, support TD-HSUPA/TD-HSDPA/TD-SCDMA/EDGE/GPRS/GSM

e: 2G EDGE version, support EDGE/GPRS/GSM

g: 2G GPRS version, support GPRS/GSM

c: 2G CDMA version, support CDMA1x

Notes:

1) option feature can be select one or all

2) for LTE version, please confirm your LTE band and Network Carrier with order to avoid wrong selection

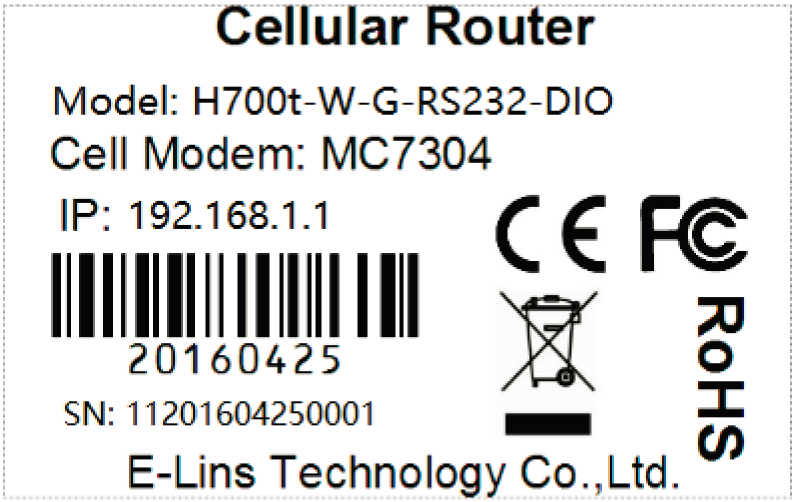
3) if there is one "x", means built-in one module; If there is two "xx", means built-in two modules

Notes: please be informed the following features are option. Please indicate with your orders.

1) WiFi Feature
2) GPS / GNSS feature
3) Serial to cellular feature, RS232 and RS485 can choose two
4) Voice/SMS control
5) DC5V~60V
6) BGP, OSPF, RIP, etc.
7) DIO (digital input and output feature)
8) RMS (Remote Management System)

2) Find the modem type info at the back cover of the router. This will be used while do configuration.

For example: the following label indicates the version, type and inside module modem. The module modem name is "MC7304", remember this and will select this module name while do configuration.



Cellular Router

Model: H700t-W-G-RS232-DIO

Cell Modem: MC7304

IP: 192.168.1.1

20160425

SN: 11201604250001

E-Lins Technology Co.,Ltd.

RoHS

1.2 Prepare SIM Card and working condition

1. H700 router has different version. Study your router version before installation.
2. For GSM/GPRS/EDGE/HSDPA/HSUPA/HSPA/HSPA+/4G LTE version, please get a SIM card with data business.
3. For CDMA2000 EVDO/CDMA1x version, please get a UIM card with data business or inform us before order if the network uses non-ruim (nam-flashing).
4. Make sure the sim card or uim card is with enough data business and balance.
5. Make sure the signal is good enough where you test or install the router. Weak signal will make the router no work. If you find your signal strength is not good, please contact us for

high gain antenna.

6. Different countries and carriers use different network band and frequency. E-Lins packs units with free world-wide-use antenna. It can work, but the data speed or signal may not be good at your sites. Please buy dedicated high gain antenna from your local suppliers or contact E-Lins to OEM/ODM the antenna.

1.3 Highly recommendation for the configuration

The wireless cellular is unstable sometimes with some uncertain issue. In order to keep the router working in the best condition, it is highly recommended that the *Cell ICMP Check* feature is activated. Please refer to *chapter 3.5.1* to configure.

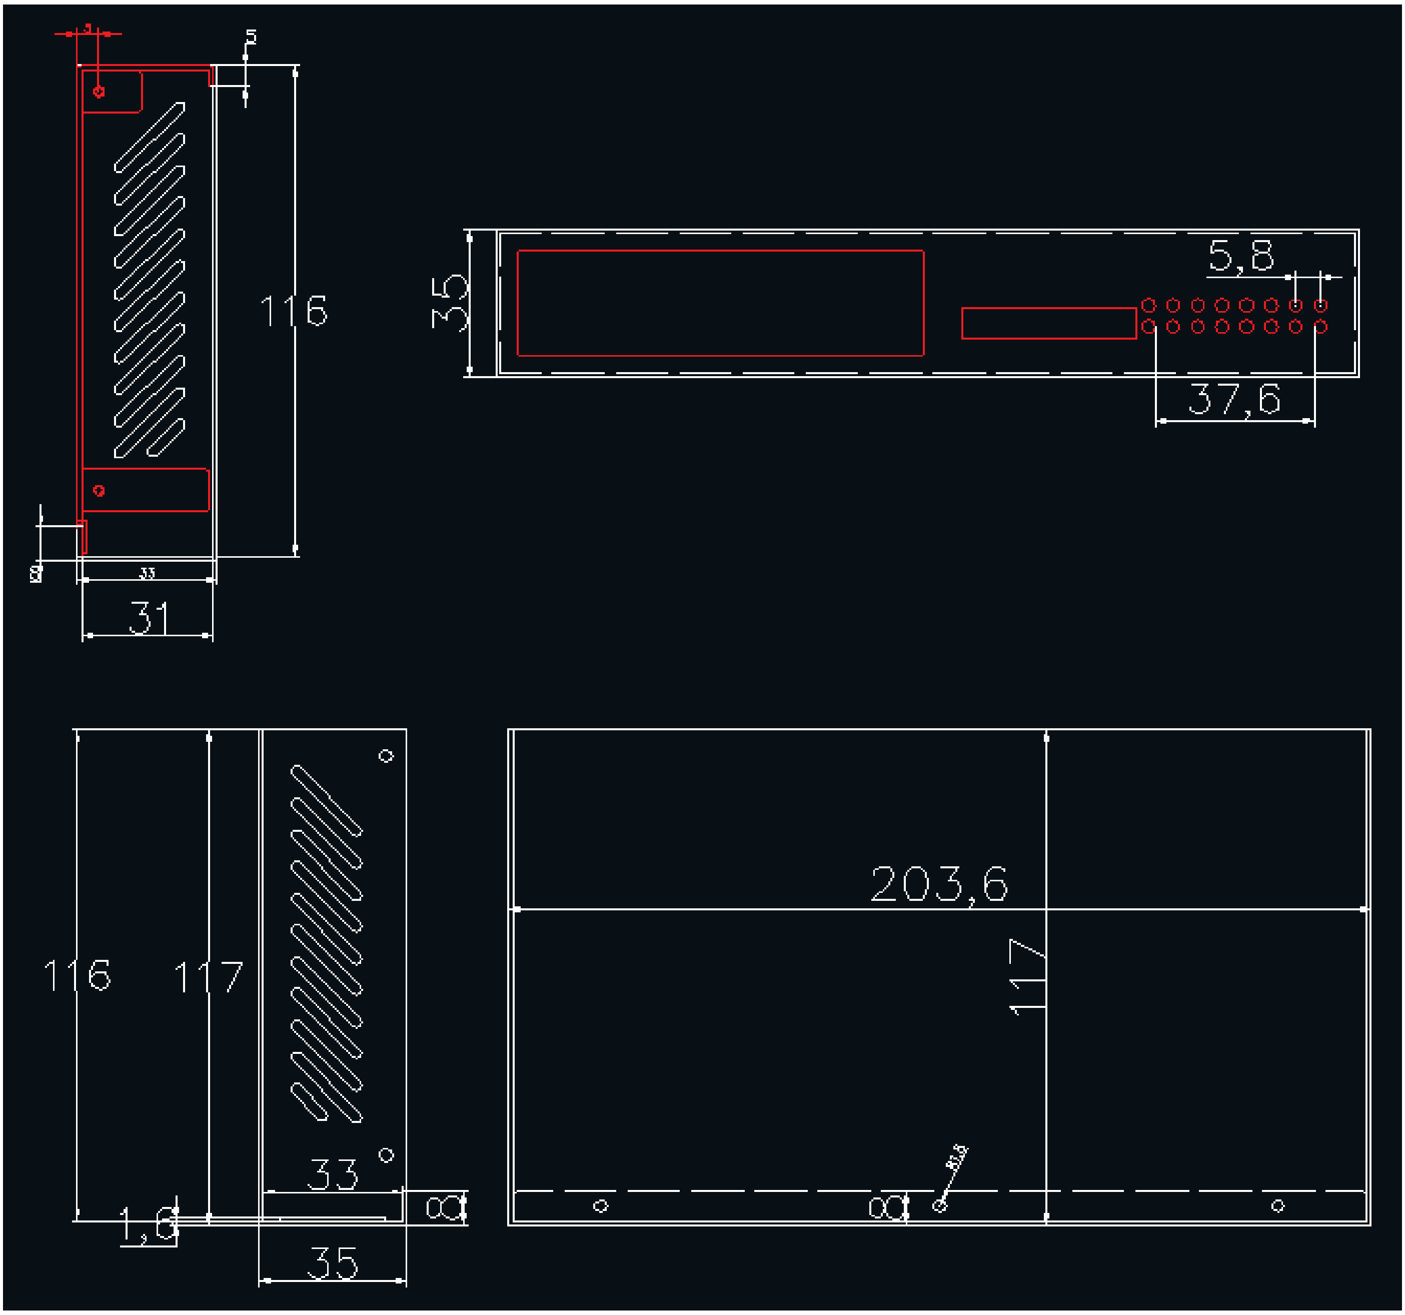
Chapter 2

2 Hardware Installation

This chapter mainly describes the appearance, model and function of H700 series and how to install and set the configurations.

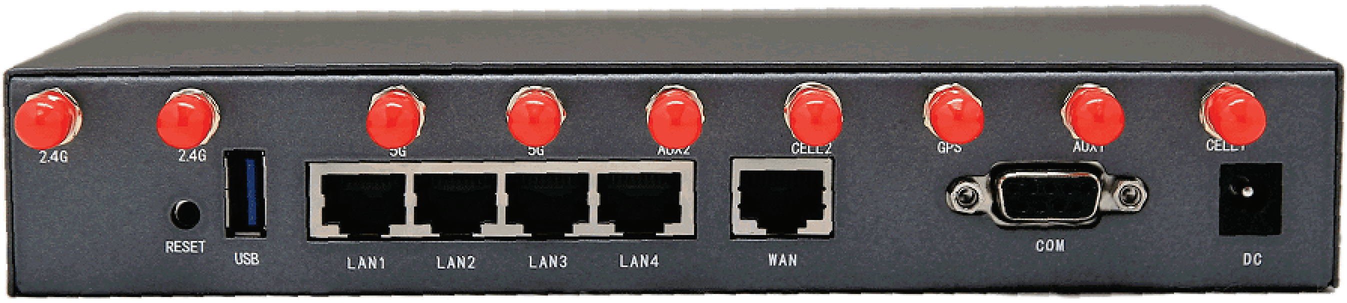
1. *Overall Dimension*
2. *Accessories Description*
3. *Installment*

2.1 Overall Dimension

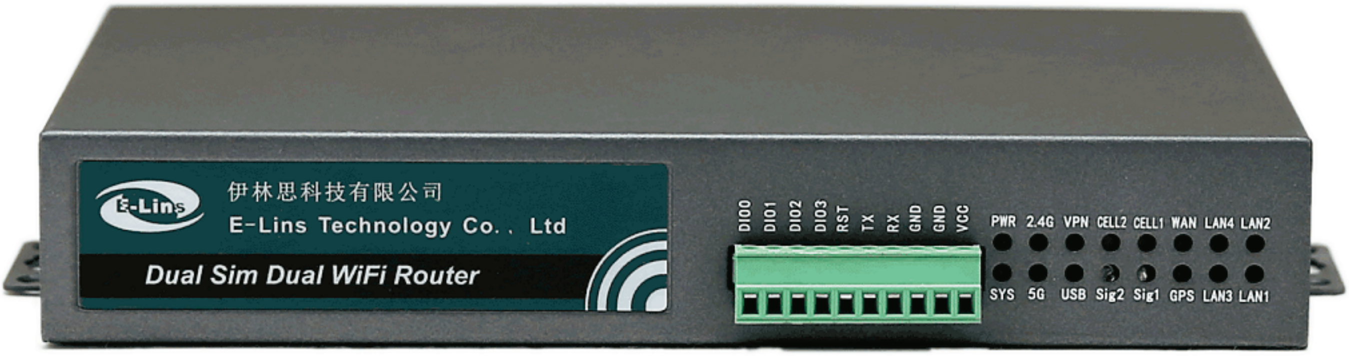


2.2 The Ports

Pictures:



LAN1-LAN4: LAN RJ45 Ethernet ports.
WAN: WAN RJ45 Ethernet ports.
RESET: system reset button
DC: DC power socket. DC5~40V, DC5~60V option depends on the router version.
USB: USB3.0 host port
COM: serial DB9 port



VCC: DC wire positive pole. DC5~40V, DC5~60V option depends on the router version
GND: DC wire ground
GND: Serial ground
RX: serial receiving
TX: serial transmission
RST: reset router
DIO0: digit I/O port 0
DIO1: digit I/O port 1
DIO1: digit I/O port 2
DIO1: digit I/O port 3

Antenna Connection Table

Antenna Connector	Marks
Cell1	for cell1 main antenna
Aux1	for cell1 auxiliary antenna
Cell2	for cell2 main antenna

Aux2	for cell2 auxiliary antenna
2.4G	for 2.4GHz WiFi antenna
5G	for 5GHz WiFi antenna
GPS	for GPS antenna

2.3 Installment

H700 series should be installed and configured properly before putting in service. The installation and configuration should be done or supervise by qualified engineer.

⚠ **Notes:**

Do not install H700 series or connect/disconnect its cable when it is power on.

2.4 SIM/UIM card installed

If your router has SIM/UIM card protector, please remove it, insert the sim card correctly, and fix the protector.

If your router has no SIM/UIM card protector, please insert the sim card correctly.

⚠ **Notes:**

SIM/UIM card does not reach the designated position, the equipment can not find a card, can't work normally, therefore inserted a try to check again for a *SIM Card* is stuck fast.

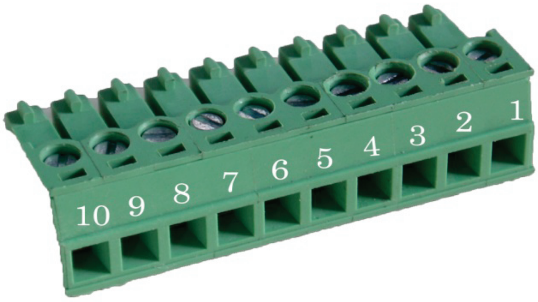
2.5 The installation of terminal blocks

This chapter is for version with terminal blocks only. Default, the H700 is with DB9 connector. Please use DB9 cable to connect H700 and the equipment directly.

The following is for version with terminal blocks only:

H700 uses pluggable terminals to connect the user's data and the power supply. Spacing: 3.81mm, 10 Pin; User data and power supply suggestion: 14~24AWG. Please refer to the table 2-4 for the interface definition of the power cable and connection sequence. Specific interface definition of the power cable and connection sequence you can read on the labels of H700 products. Using 14~24AWG cable and referring to H700 products labels or the bellowed interface definition and connection sequence, you need to use the oblate screw driver to fix the cable to the connecting jacks of the pluggable terminal. After successfully connection, you need to insert the terminal into the corresponding position in the bottom of the H700 products.

⚠ **Notes:** Connection sequence should be accurate。Cable's insulating striping length is about 7mm. (For safety, insulating striping length should be too long). Please refer to the picture.



⚠ **Attention:**

1. *The power cable should be connected correctly. We suggestion double check before switch it on. Wrong connections may destroy the equipment.*
2. *Power terminals: Pin 1 and Pin 2;*
3. *Here: Pin 2 is "GND", PIN 1 is power input "Vin"(DC5~40V, or DV5~60V).*

PIN	Signal	Description	Note
1	VCC	+5-40V DC Input, +5~60V option	Current: 12V/1A
2	GND	Ground	
3	GND	Serial Ground	
4	RX	Receive Data	
5	TX	Transmit Data	
6	RST	Reset	Reset Pin has the same function with reset button. In the usage, it needs to be short connected to the GND. After giving the device a 1 sec low level, it will reboot.3 seconds, the device will restore factory settings
7	DIO0	General Purpose I/O	
8	DIO1	General Purpose I/O	
9	DIO2	General Purpose I/O	
10	DIO3	General Purpose I/O	

I/O Terminal on router	Serial port (RS485 or RS232)
Port 3 (GND)	Pin 5
Port 4 (RX)	Pin 2
Port 5 (TX)	Pin 3

Tips If not through, can switch Port4 and Port5.

2.6 Grounding

To ensure a safe, stable and reliable H700 series operation, Router cabinet should be grounded properly.

2.7 Power Supply

H700 series can be applied to complicated external environment and usually the power range is very large. So in order to fit the complicated application environment and improve the stability of the system, H700 series is designed with advanced power management technology. The DC power supply electronic to the device via the pluggable terminal PIN 2(GND) and PIN 1(Vin). Please refer to the above table for the detail definition of the terminal.

Normally, H700 series input powers supply is +5～+40V (if your H700 support 50V, the option is +5~+50V). In most cases, the standard configuration is 12V/1A.

⚠ **Attention:**

The H700 supports POE (Power over Ethernet). It supports 5-40VDC default, it the POE voltage is 48V, please order 5-60VDC version, otherwise it will defeat the hardware of H700.

2.8 LED and Check Network Status

Please connect the antenna after you successfully connect to the cable. And then insert the valid SIM/UIM card and provide the power to the H700 series via the cable. After provide the power to H700, if the SYS LED starts to blink in a few seconds, that means the system start-up is normal; if the CELL LED works, that means the network is online; if the VPN light works, that means VPN tunnel has been set up. Please refer to the below table for the situation of the indication lights.

LED	Indication Light	Description
SYS	On for 25 seconds	On for 25 seconds after power supply
	blink	System set-up normally
	Off or still on after 25 seconds	System set-up failure
LAN 1-4	blink	Data transmission in Ethernet
	Off	Ethernet connection abnormal
	On	Ethernet is connected
VPN	On	IPSec VPN tunnel set-up

	Off	IPsec VPN tunnel set-up failure or inactivated
CELL1 CELL2	On	Access to the Internet
2.4G 5G	On	WiFi Enable
	Off	WiFi Disable
WAN	blink	Data transmission in Ethernet
	Off	Ethernet connection abnormal
	On	Ethernet is connected
PWR	On	Power is on
USB	On	External USB device is connected
GPS	On	GPS is online
Sig1 Sig2	Off	No signal, or signal checking is not ready
	blink (2 seconds for on, and 2 seconds for off)	Signal bar is 1
	blink (1 seconds for on, and 1 seconds for off)	Signal bar is 2
	blink (0.5 seconds for on, and 0.5 seconds for off)	Signal bar is 3

LED	Indication Light	Description
SYS	On for 25 seconds	On for 25 seconds after power supply
	blink	System set-up normally
	Off or still on after 25 seconds	System set-up failure
GPS	On	GPS is online
TF	On	External TF card (MicroSD Card) is connected
WiFi	On	WiFi is Enabled
	Off	WiFi is Disabled
CELL1 CELL2	On	Online to the Internet/Private Networks
	Off	Not online
Signal	On	1 LED on is 1 bar. 2 LEDs on is 2 bar. 3 LEDs on is 3 bar. 4 LEDs on is 4 bar.
	Off	No signal, or signal checking is not ready

LAN 1-4	blink	Data transmission in Ethernet
	Off	Ethernet connection abnormal
	On	Ethernet is connected
VPN	On	IPSec VPN tunnel set-up
	Off	IPsec VPN tunnel set-up failure or inactivated
WAN	blink	Data transmission in Ethernet
	Off	Ethernet connection abnormal
	On	Ethernet is connected

Chapter 3

3 Software configuration

3.1 Overview

H700 series routers with built-in WEB interface configuration, management and debugging tools, user should configuration the parameters first; and it could be altered the parameters flexibility and software upgrades and simple testing. User can set up and manage the parameters of the router on its interface, detail step are bellow:

3.2 How to log into the Router

3.2.1 Network Configuration of the Computer.

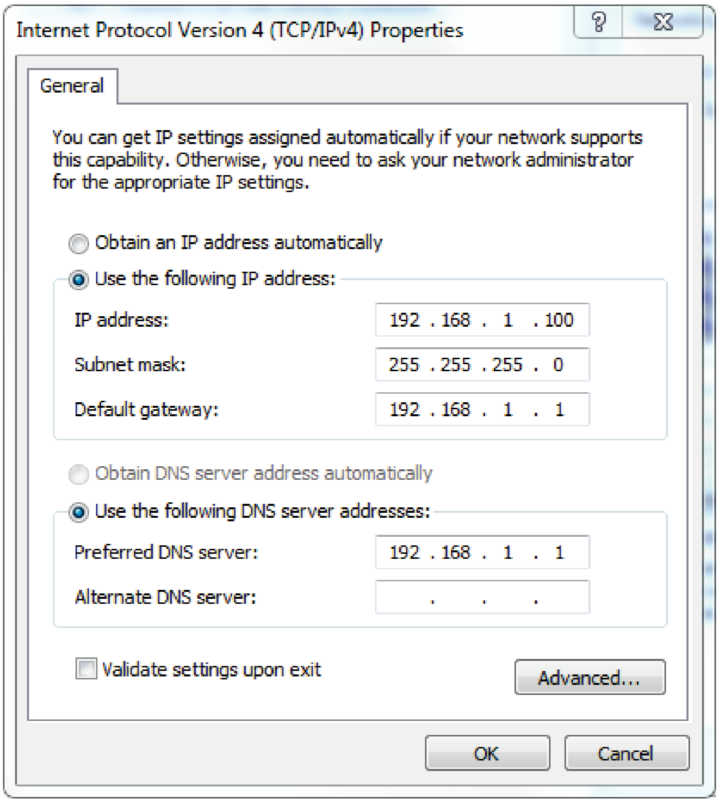
The router default parameters as follow

Default IP: 192.168.1.1, sub mask: 255.255.255.0.

There are two ways to set the PC’s IP address.

Way 1) Manual setting

Set the PC IP as 192.168.1.xxx (xxx = 2~254), subnet mask: 255.255.255.0, default gateway: 192.168.1.1, primary DNS: 192.168.1.1.



Internet Protocol Version 4 (TCP/IPv4) Properties

General

You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.

○ Obtain an IP address automatically

● Use the following IP address:

IP address:	192 . 168 . 1 . 100
Subnet mask:	255 . 255 . 255 . 0
Default gateway:	192 . 168 . 1 . 1

○ Obtain DNS server address automatically

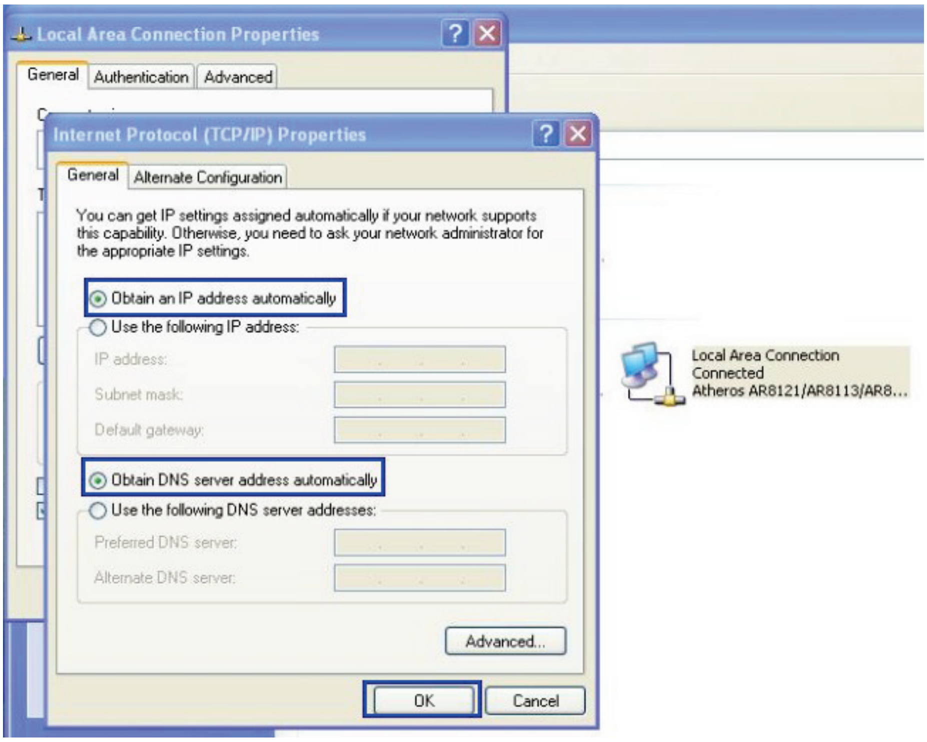
● Use the following DNS server addresses:

Preferred DNS server:	192 . 168 . 1 . 1
Alternate DNS server:	. . .

□ Validate settings upon exit

Way 2) DHCP

Choose “Obtain an IP address automatically” and “Obtain DNS server address automatically”.



Local Area Connection Properties

General | Authentication | Advanced

Internet Protocol (TCP/IP) Properties

General | Alternate Configuration

You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.

● Obtain an IP address automatically

○ Use the following IP address:

IP address:

Subnet mask:

Default gateway:

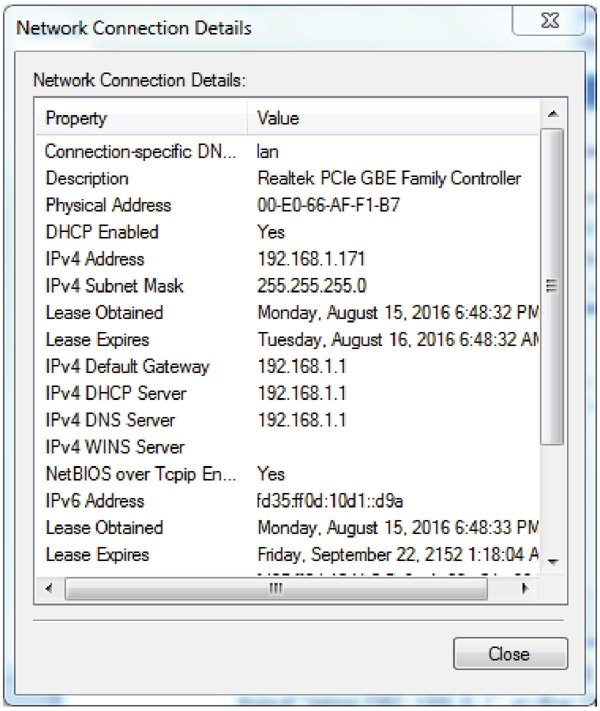
● Obtain DNS server address automatically

○ Use the following DNS server addresses:

Preferred DNS server:

Alternate DNS server:

Local Area Connection
Connected
Atheros AR8121/AR8113/AR8...

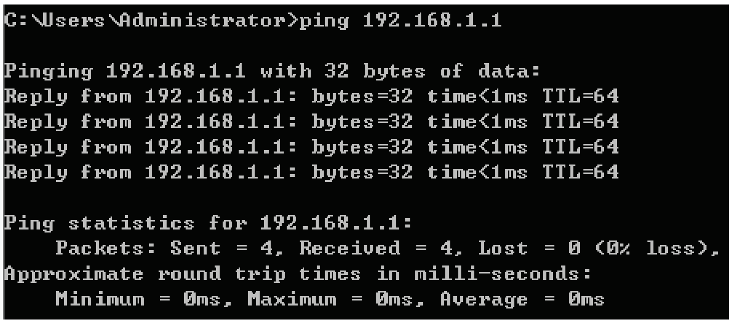


Network Connection Details

Network Connection Details:

Property	Value
Connection-specific DN...	lan
Description	Realtek PCIe GBE Family Controller
Physical Address	00-E0-66-AF-F1-B7
DHCP Enabled	Yes
IPv4 Address	192.168.1.171
IPv4 Subnet Mask	255.255.255.0
Lease Obtained	Monday, August 15, 2016 6:48:32 PM
Lease Expires	Tuesday, August 16, 2016 6:48:32 AM
IPv4 Default Gateway	192.168.1.1
IPv4 DHCP Server	192.168.1.1
IPv4 DNS Server	192.168.1.1
IPv4 WINS Server	
NetBIOS over Tcpip En...	Yes
IPv6 Address	fd35:ff0d:10d1::d9a
Lease Obtained	Monday, August 15, 2016 6:48:33 PM
Lease Expires	Friday, September 22, 2152 1:18:04 A

After IP setting, check it by ping. Click Windows start menu, run, execute “cmd” command. Input “ping 192.168.1.1” in the DOS window.

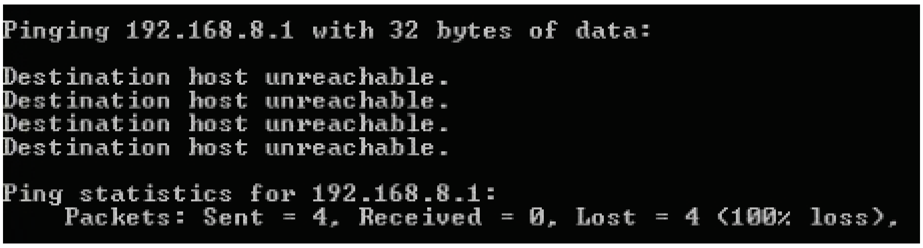


```
C:\Users\Administrator>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:
Reply from 192.168.1.1: bytes=32 time<1ms TTL=64
Reply from 192.168.1.1: bytes=32 time<1ms TTL=64
Reply from 192.168.1.1: bytes=32 time<1ms TTL=64
Reply from 192.168.1.1: bytes=32 time<1ms TTL=64

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 0ms, Maximum = 0ms, Average = 0ms
```

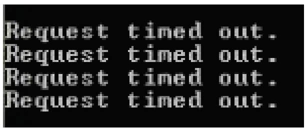
This information means the connection is work.



```
Pinging 192.168.8.1 with 32 bytes of data:

Destination host unreachable.
Destination host unreachable.
Destination host unreachable.
Destination host unreachable.

Ping statistics for 192.168.8.1:
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),
```

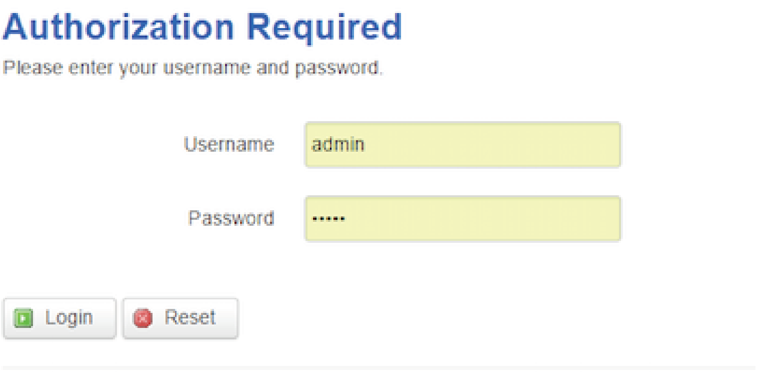


```
Request timed out.
Request timed out.
Request timed out.
Request timed out.
```

This information means the connection is failure. If so, please check the network cable connection and IP address setting, and can refer to *Chapter 4.9*.

3.2.2 Log into Router

- Open the Web Browser, and type http://192.168.1.1 into the address field and press Enter bottom in your computer keyboard.
- Type User Name “admin” and Password “admin” in the Login page, and then press the “Login” button.



Authorization Required

Please enter your username and password.

Username: admin

Password: •••••

- If you type into the correct User Name and Password, you will get the access into the Router’s status overview page.

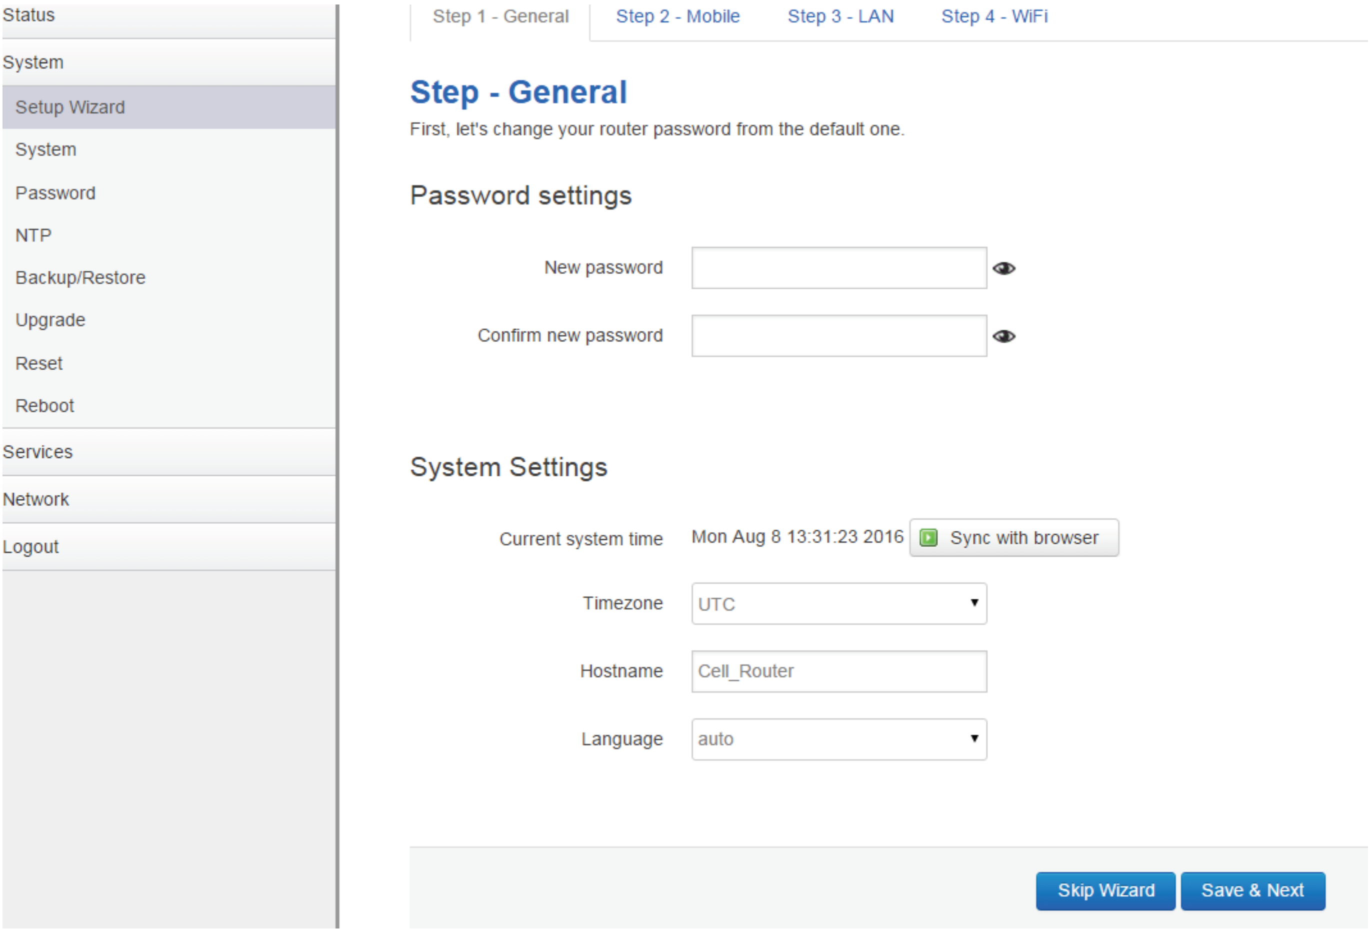
3.4 System Configuration

3.4.1 Setup wizard

When login in router at the first time, setup wizard pages show.



Step - General

First, let's change your router password from the default one.

Password settings

New password

Confirm new password

System Settings

Current system time Mon Aug 8 13:31:23 2016 Sync with browser

Timezone UTC

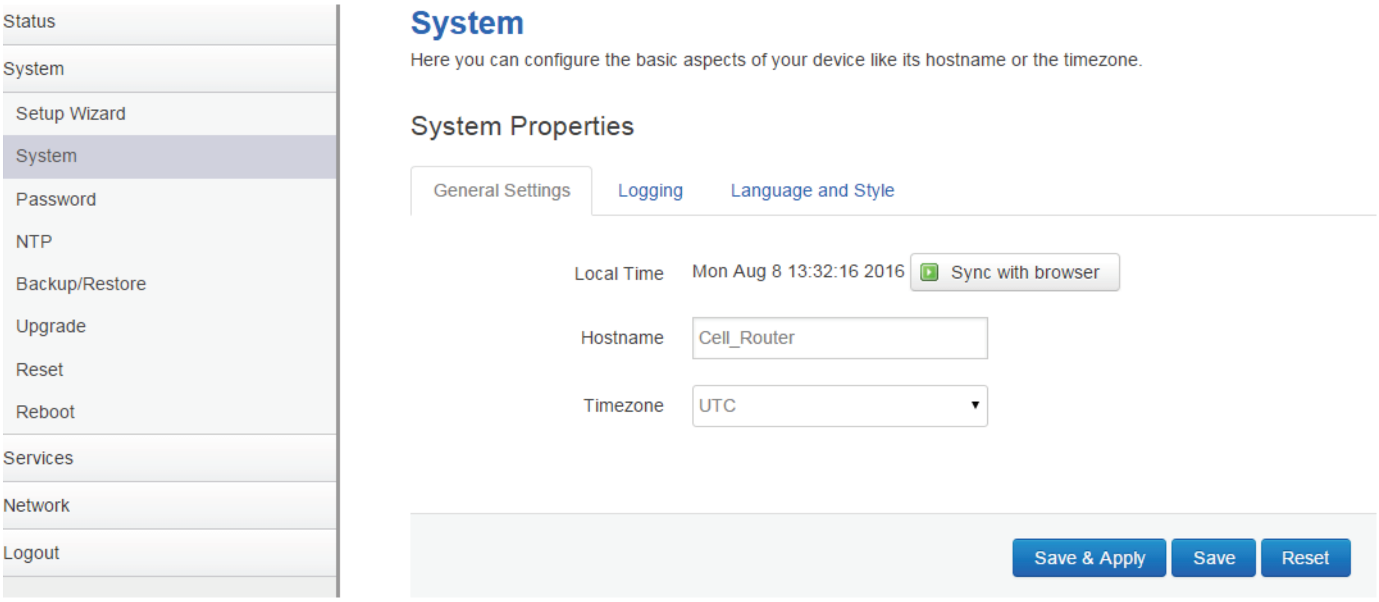
Hostname Cell_Router

Language auto

Note:

pressing button “Save & Next” will save configuration and jump to the next page. All configurations will be applied after click button “Finish” at the final step (Step-WiFi).

3.4.2 System



System

Here you can configure the basic aspects of your device like its hostname or the timezone.

System Properties

Local Time: Mon Aug 8 13:32:16 2016

Hostname: Cell_Router

Timezone: UTC

General Settings

➢ **Local Time**

It displays system time, and the final user can Sync this time with browser by clicking button "Sync with browser".

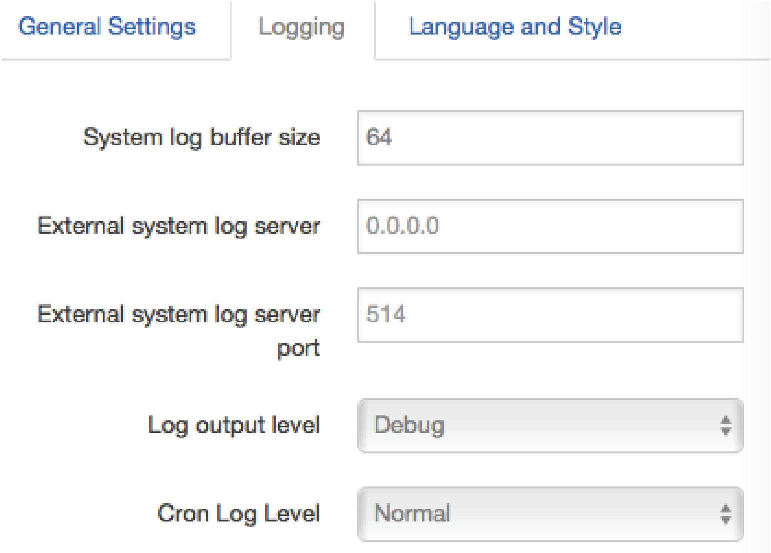
➢ **Hostname**

It is the router's name, the default name is Cell_Router.

➢ **Time zone**

Select a suitable time zone. The default value is UTC

Logging settings



System log buffer size: 64

External system log server: 0.0.0.0

External system log server port: 514

Log output level: Debug

Cron Log Level: Normal

➢ **System log buffer size**

The unit is KB, default value is 64 KB. If the real log size is bigger than the value configured, the oldest log will be dropped.

- **External system log server**

The IP address of external log server. The final user can setup a Linux machine with syslogd run as log server.

- **External system log server port**

The UDP port of external log server.

- **Log output level**

Log level, the default is debug with highest level, Emergency is the lowest level.

- **Cron log level**

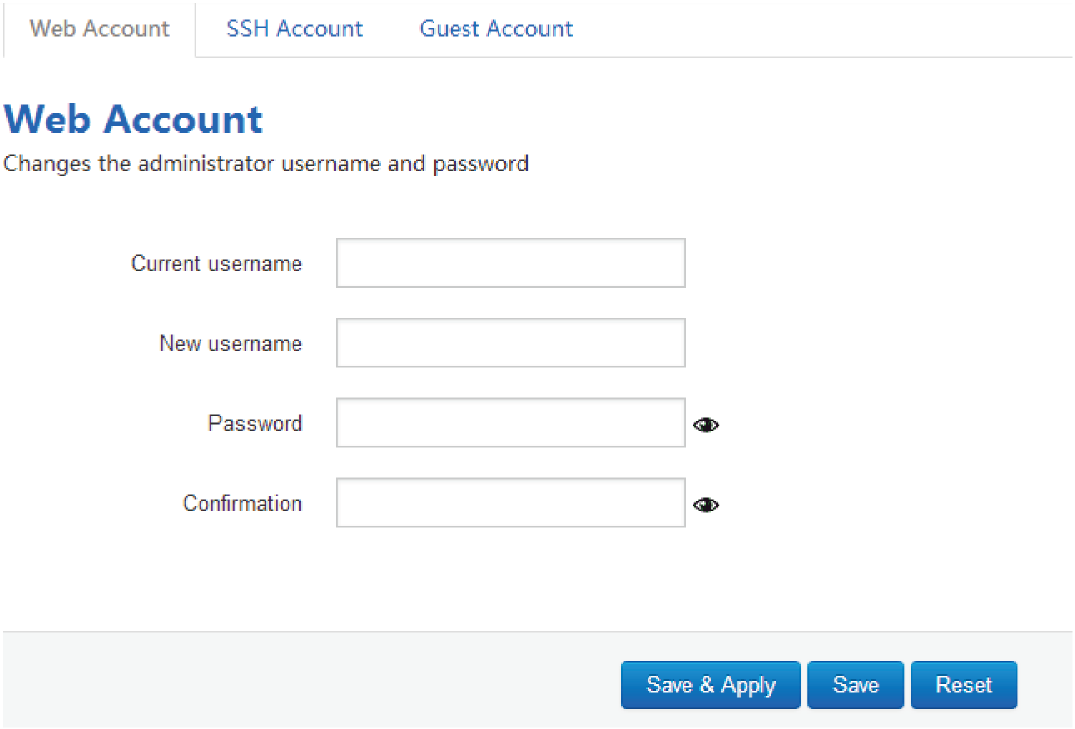
It is log level for process Crond.

Language: English

- **Language**

The default language is "Auto". The final user can choose English or Chinese.

3.4.3 Password



Web Account

Changes the administrator username and password

Current username	
New username	
Password	
Confirmation	

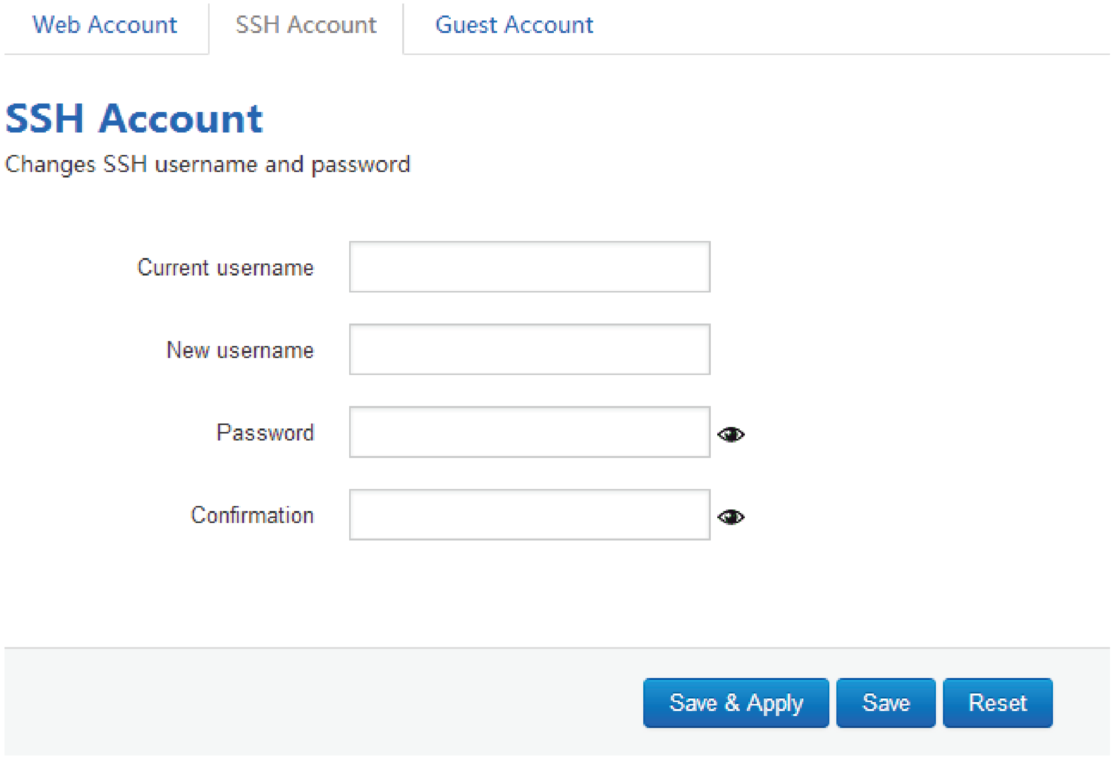
Change username and password for accessing device web. Click "eye button" can show the new password you entered.

Current username. The username of web account is using.

New username: change web account username to the new one.

Password: new password.

Confirmation: same as Password.



SSH Account

Changes SSH username and password

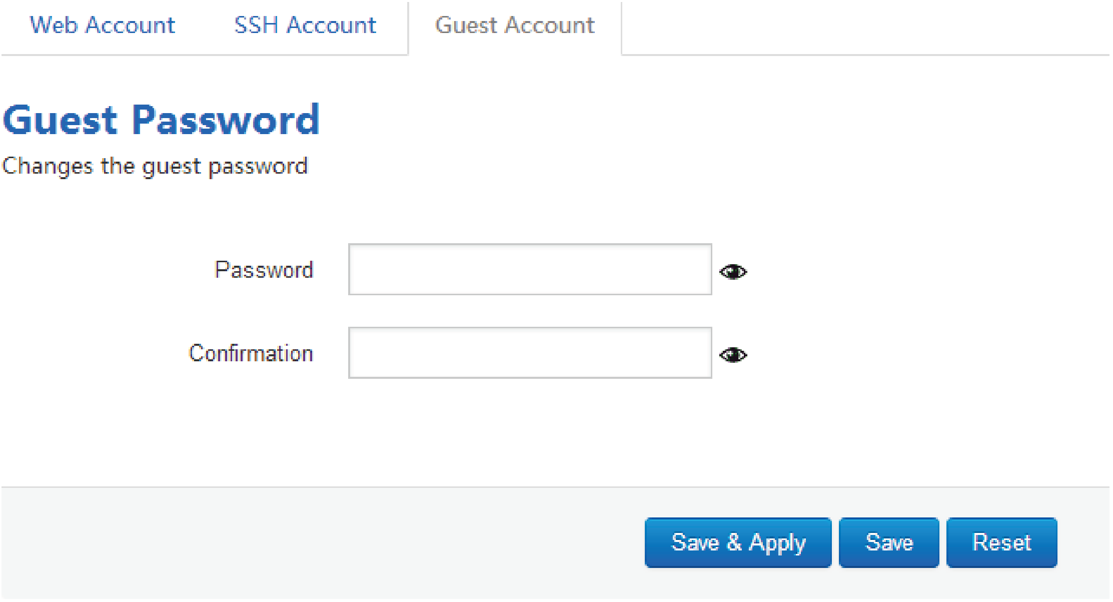
Current username

New username

Password

Confirmation

Change the username and password for ssh access.



Guest Password

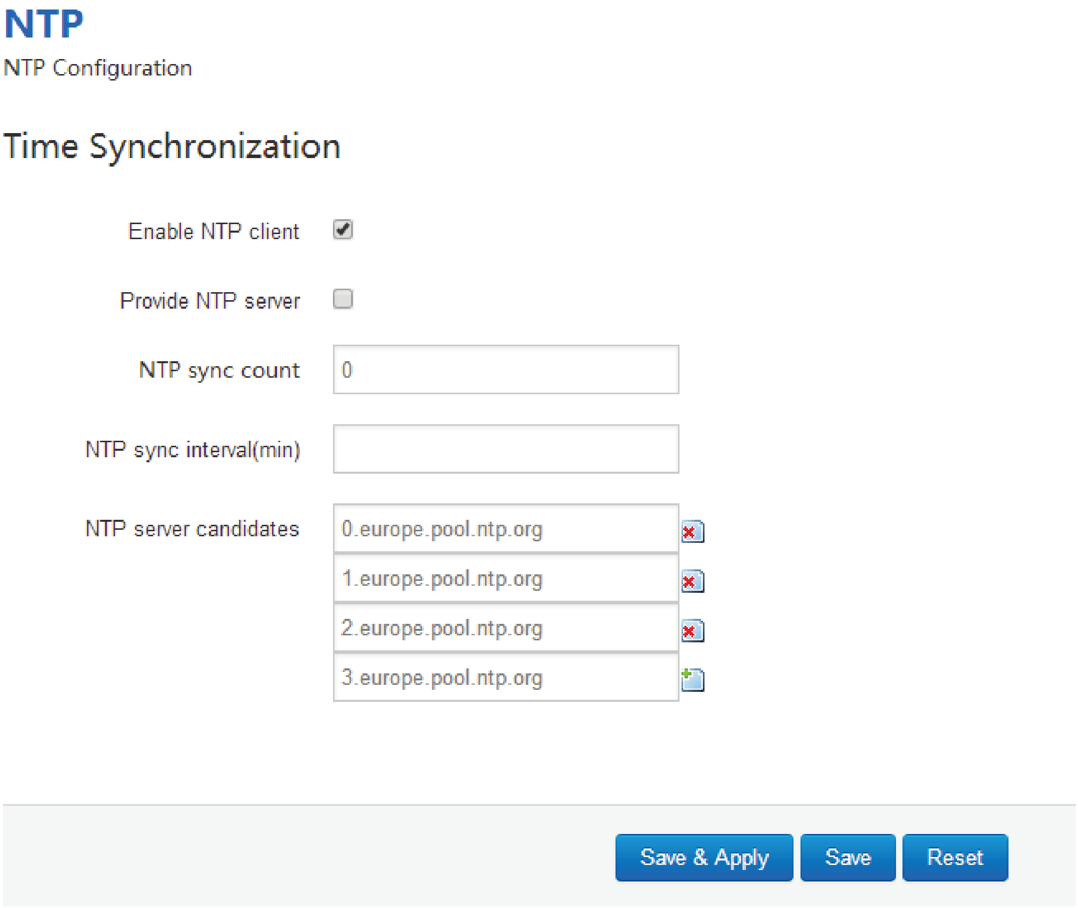
Changes the guest password

Password

Confirmation

Change the password for guest user.

3.4.4 NTP



NTP

NTP Configuration

Time Synchronization

Enable NTP client ☑

Provide NTP server □

NTP sync count: 0

NTP sync interval(min):

NTP server candidates:
0.europe.pool.ntp.org
1.europe.pool.ntp.org
2.europe.pool.ntp.org
3.europe.pool.ntp.org

NTP is network timing protocol.

- **Enable NTP client**

The default value is enabled. Router acts as a NTP client.

- **Provide NTP server**

The default value is unchecked. Router acts as a NTP server.

- **NTP sync count**

NTP running counts after router connects to internet,0 or empty means infinite.

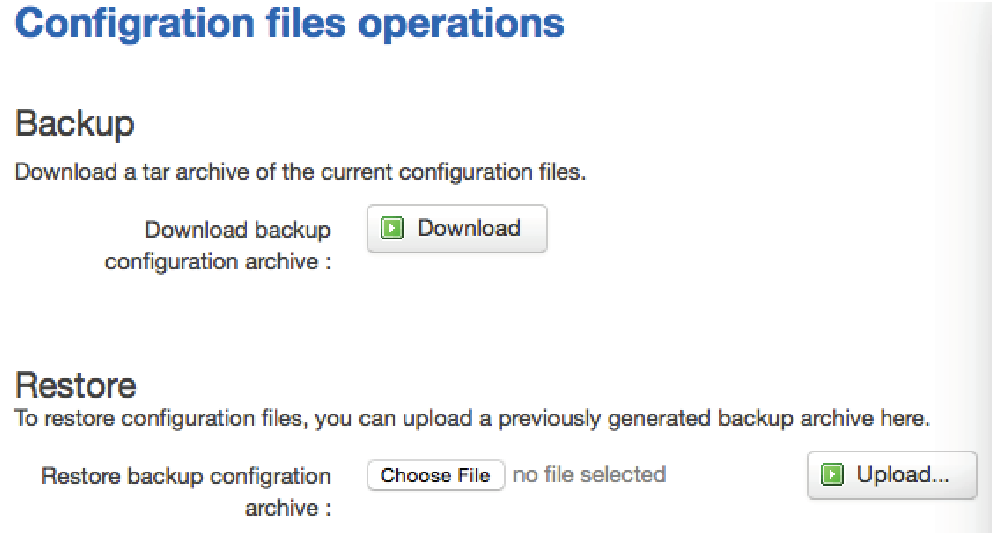
- **NTP sync interval(min)**

The interval time between NTP synchronization.

- **NTP server candidates**

It is NTP server list, multiple NTP server is accepted. The final user can click the button ☒ to delete an entry, or click button ➕ to add a new entry.

3.4.5 Backup/Restore



Configration files operations

Backup

Download a tar archive of the current configuration files.

Download backup configuration archive :

Restore

To restore configuration files, you can upload a previously generated backup archive here.

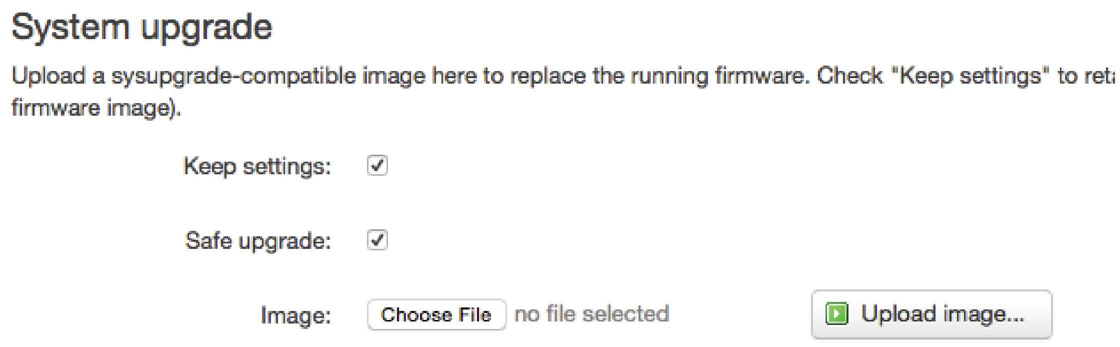
Restore backup configration archive : no file selected

It is used for configuration files backup and restore.

For backup configuration files, click button “Download”, an archive file will be generated and be downloaded to your PC automatically.

For restore configuration files, you can click button “Choose File”, then select an archived configuration file, and finally click button “Upload”, then system will load this file and apply it, and then restart router.

3.4.6 Upgrade



System upgrade

Upload a sysupgrade-compatible image here to replace the running firmware. Check "Keep settings" to ret
firmware image).

Keep settings: ☑

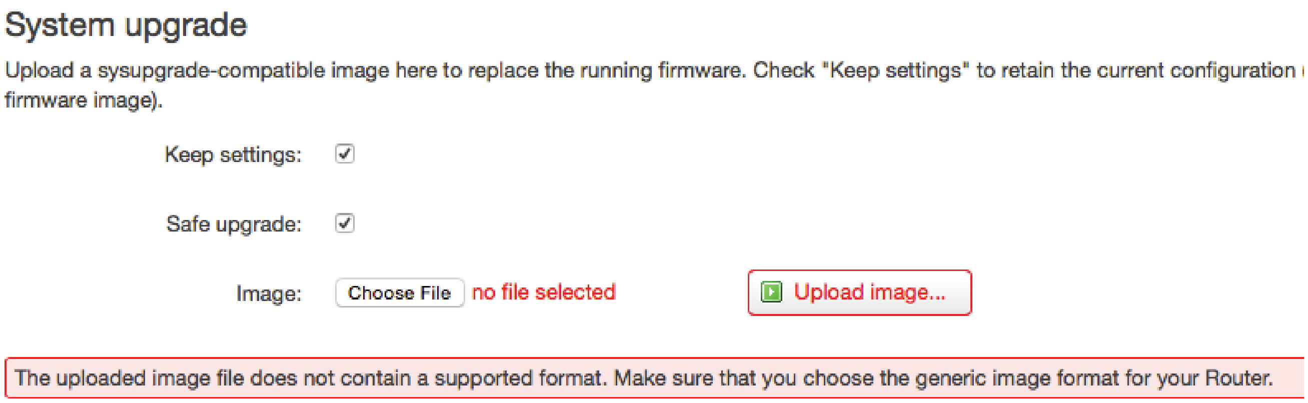
Safe upgrade: ☑

Image: no file selected

Upload a system compatible firmware to replace the running firmware. The default value for “Keep settings” is checked, that means current configuration will be kept after system upgrade, otherwise router will be reset to factory setting. But we highly recommend uncheck “Keep settings”, otherwise it may bring uncertain parameters conflicting after updating.

Safe upgrade option is checked by default. Please always keep it checked to avoid broken firmware.

Click button “Choose File” to select a compatible firmware then click button “Upload image…”. Router will do a basic checking for the uploaded file. If it is not compatible file, an error will be generated like this:



System upgrade

Upload a sysupgrade-compatible image here to replace the running firmware. Check "Keep settings" to retain the current configuration
firmware image).

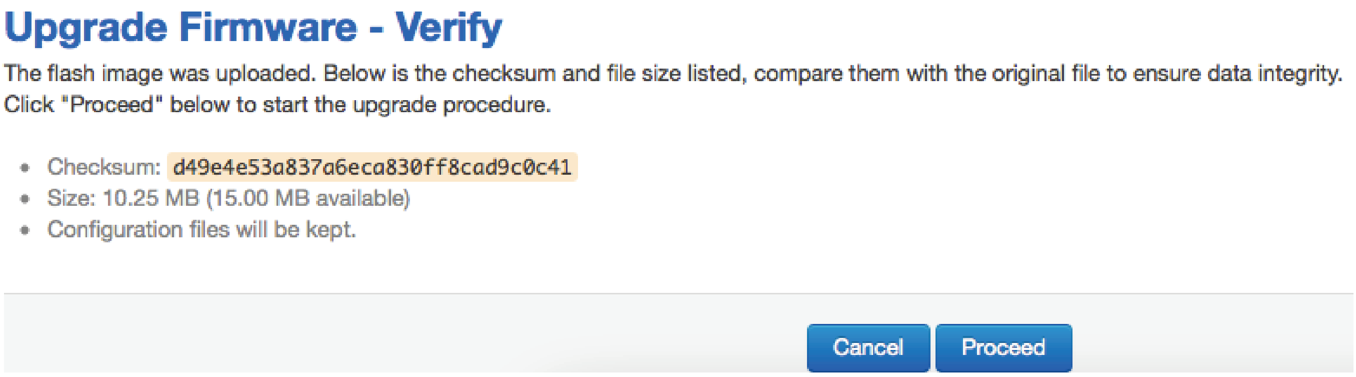
Keep settings: ☑

Safe upgrade: ☑

Image: Choose File no file selected

The uploaded image file does not contain a supported format. Make sure that you choose the generic image format for your Router.

If the firmware file is OK, it will go to the verify page, then click button “Proceed”, and system will restart soon.

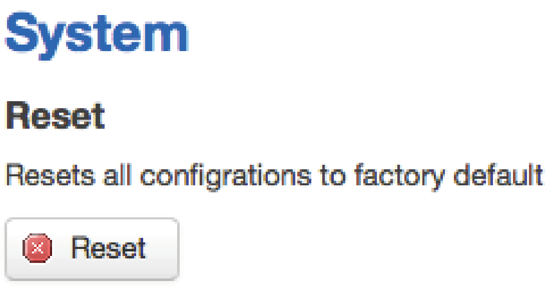


Upgrade Firmware - Verify

The flash image was uploaded. Below is the checksum and file size listed, compare them with the original file to ensure data integrity.
Click "Proceed" below to start the upgrade procedure.

- Checksum: d49e4e53a837a6eca830ff8cad9c0c41
- Size: 10.25 MB (15.00 MB available)
- Configuration files will be kept.

3.4.7 Reset



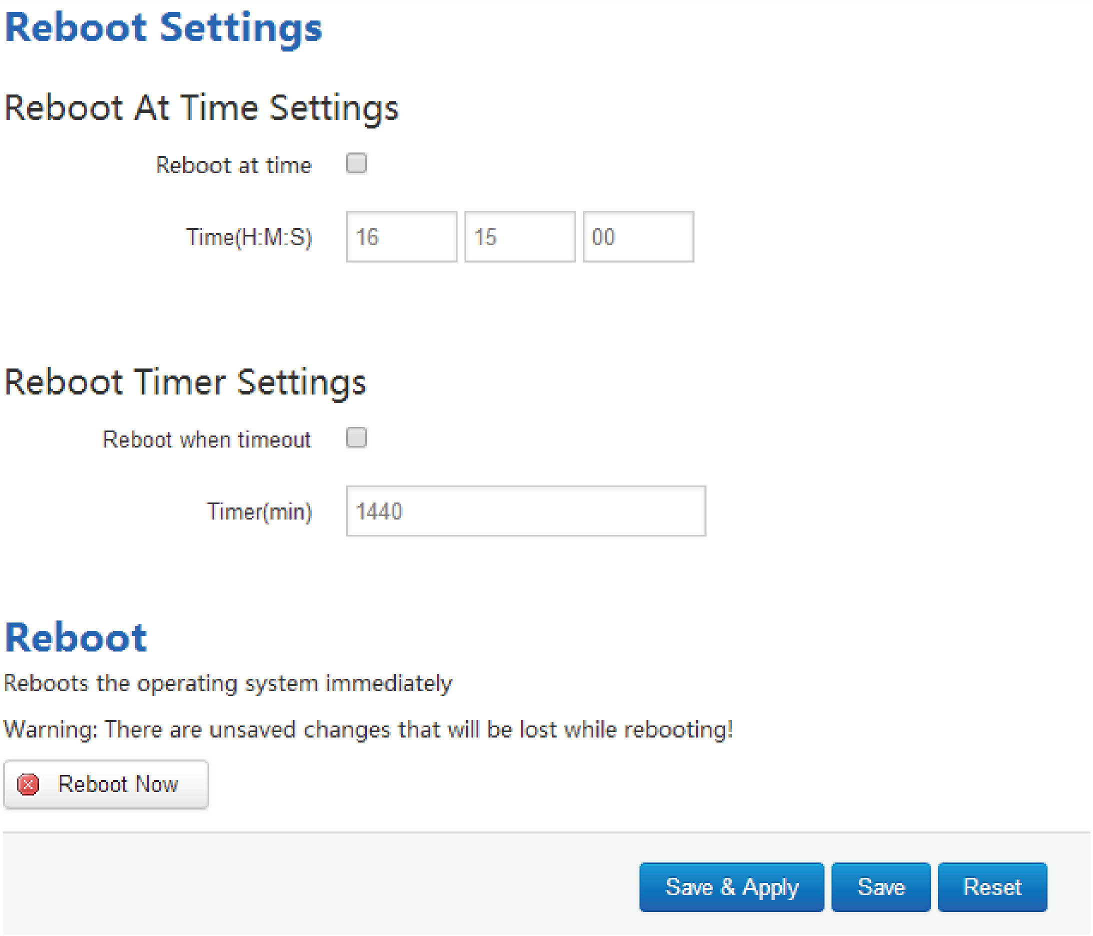
System

Reset

Resets all configrations to factory default

Reset all configurations to factory default, after click button “Reset”, there is pop dialog to ask it’s really to reset, click button “cancel” will do nothing, click button “OK” will reset all configuration to default and restart system.

3.4.8 Reboot



Reboot Settings

Reboot At Time Settings

Reboot at time □

Time(H:M:S) 16 15 00

Reboot Timer Settings

Reboot when timeout □

Timer(min) 1440

Reboot

Reboots the operating system immediately

Warning: There are unsaved changes that will be lost while rebooting!

Reboot at time: reboot router at a specific time.

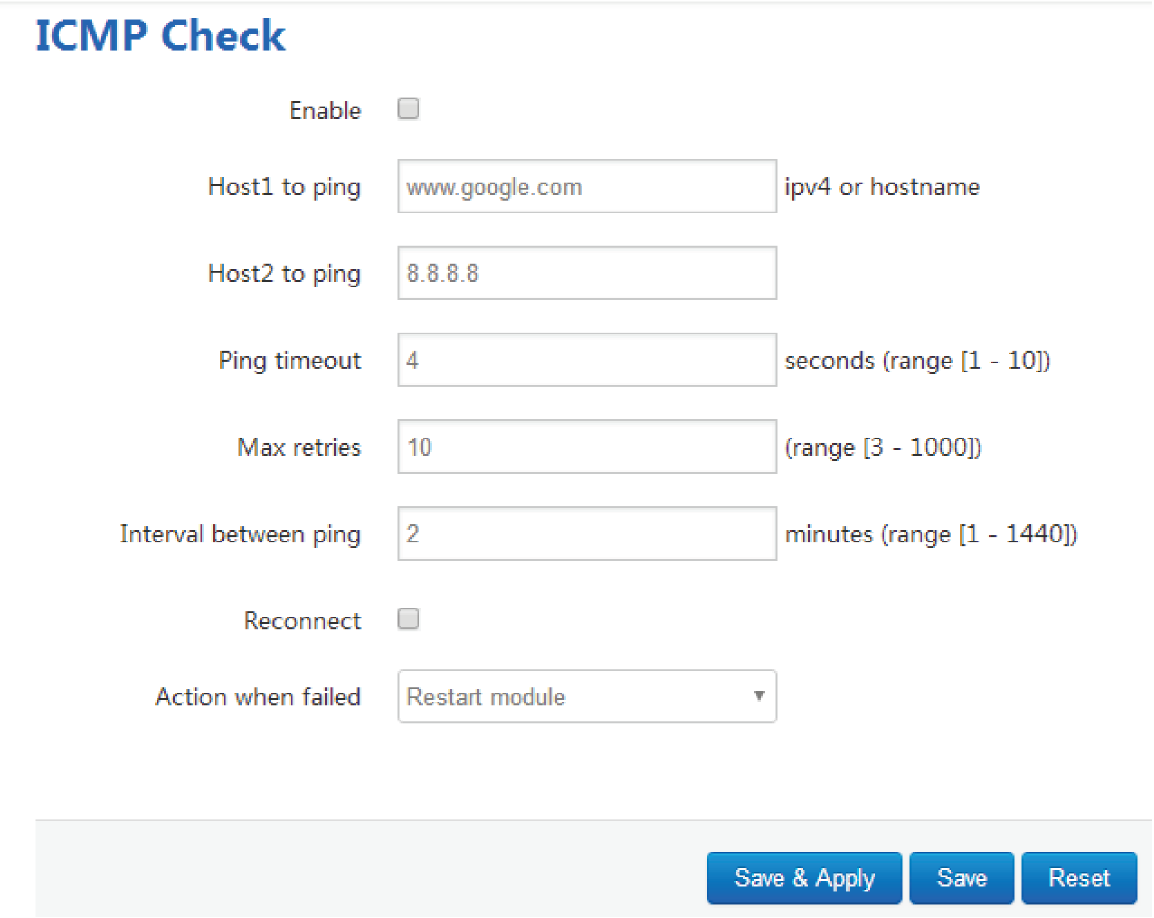
Reboot when timeout: reboot router after timer timeout.

Click button “Reboot Now”, the system will restart in several seconds.

3.5 Services configuration

3.5.1 ICMP check

For router working with best stability, we highly suggest activate and use this feature.
With this feature, the Router will automatically detect its working status and fix the problem.



ICMP Check

Enable	□	
Host1 to ping	www.google.com	ipv4 or hostname
Host2 to ping	8.8.8.8	
Ping timeout	4	seconds (range [1 - 10])
Max retries	10	(range [3 - 1000])
Interval between ping	2	minutes (range [1 - 1440])
Reconnect	□	
Action when failed	Restart module ▾	

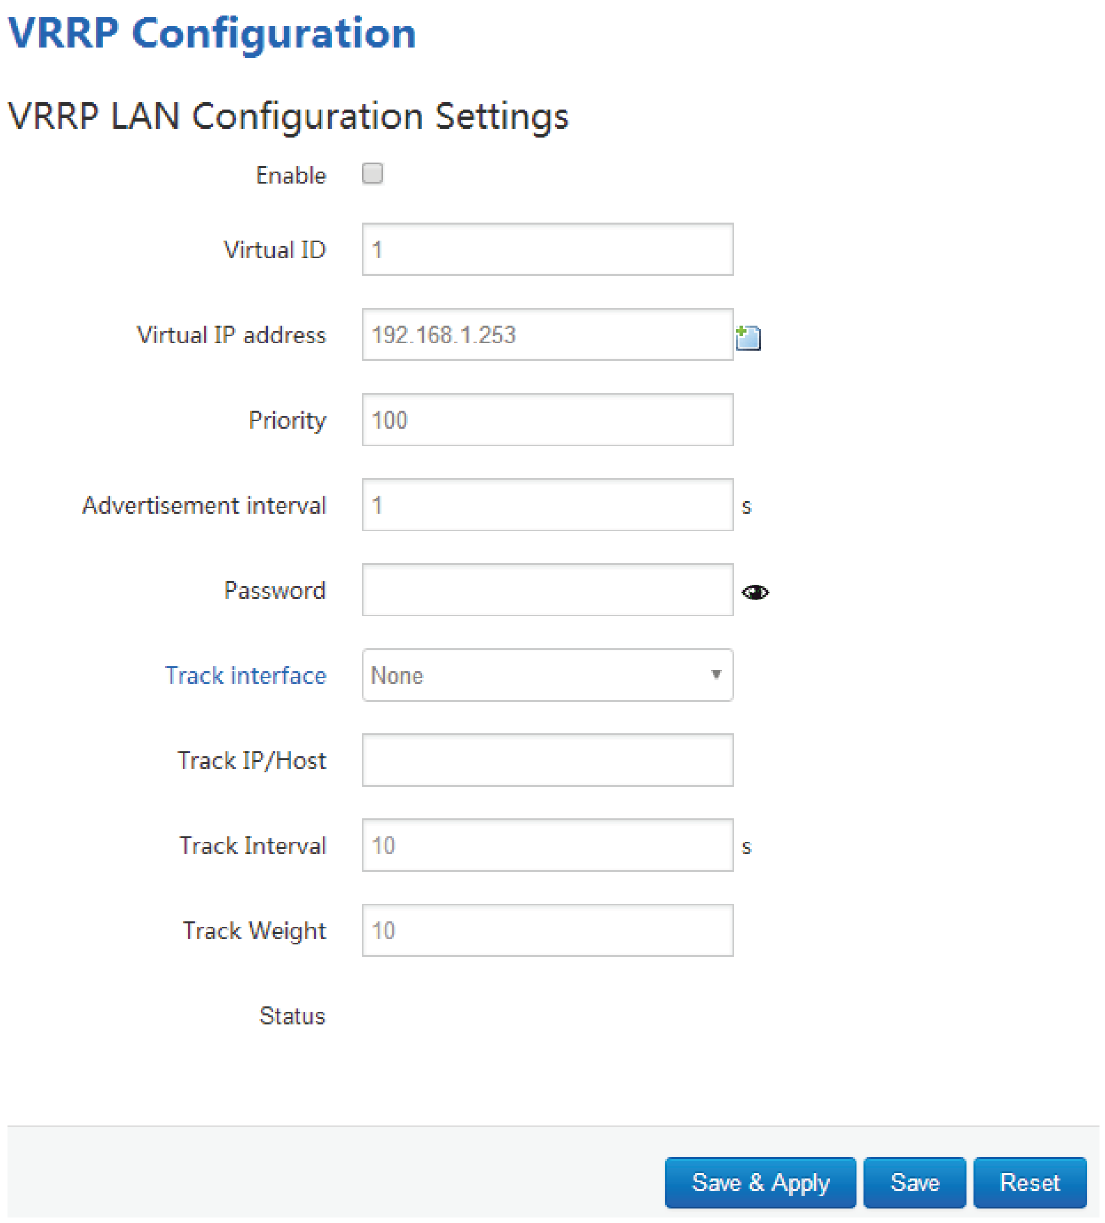
- **Enable**: Enable ICMP check feature
- **Host1 to ping / Host2 to ping**: The domain name or IP address for checking the network connection.
- **Ping timeout**: If ping packet is sent, the response packet is not received before timeout, then this ping is failed.
- **Max retries**: If the ping is failed, the failed counter will add one. If the failed counter is bigger or

equal to the Max retries, then system will say the ICMP check is failed, an action configured in item “Action when failed” will be triggered.

If the ping is succeeding, failed counter will be reset to 0 at anytime.

- **Interval between ping**: The time between twice ping. The unit is minute.
- **Reconnect**: Reconnect cell interface if ping failed.
- **Action when failed**: there are “Restart module” and “Restart router”. “Restart module” will fix the problem from radio module, and “Restart router” will fix the problem from the whole system including radio module.

3.5.2 VRRP



VRRP Configuration

VRRP LAN Configuration Settings

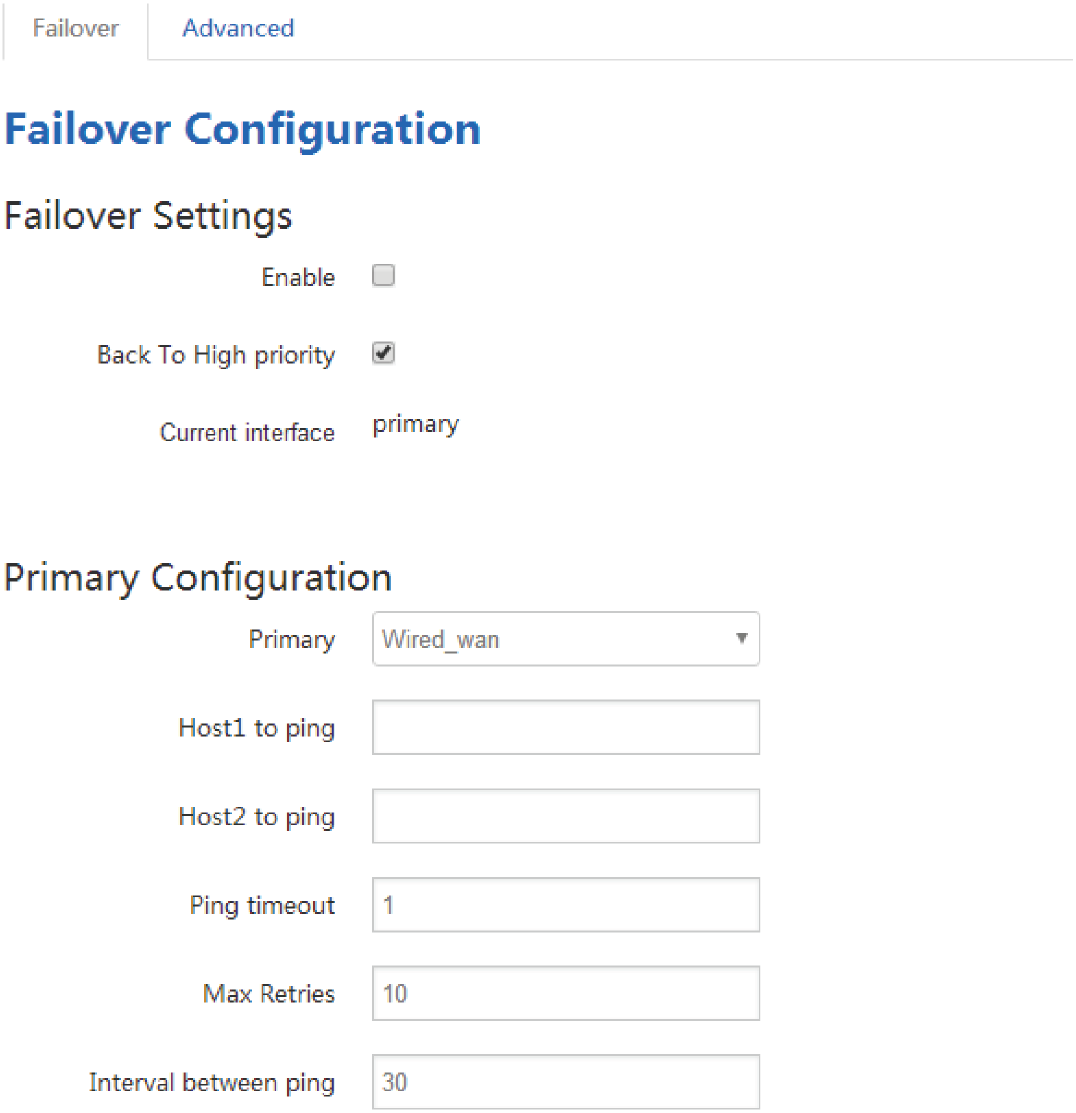
Enable	□
Virtual ID	1
Virtual IP address	192.168.1.253
Priority	100
Advertisement interval	1 s
Password	
Track interface	None
Track IP/Host	
Track Interval	10 s
Track Weight	10
Status	

- **Enable**: Enable VRRP(Virtual Router Redundancy Protocol) for LAN.

- **Virtual ID**: Routers with same IDs will be grouped in the same VRRP (Virtual Router Redundancy Protocol) cluster, range [1 - 255].
- **Virtual IP address**: Virtual IP address(es) for LAN's VRRP cluster. IP address entry can be deleted by click button ☒, or added by click button ⊞.
- **Priority**: Router with highest priority in the same VRRP cluster will act as master. The legal number is from 1 to 255.
- **Advertisement interval:** VRRP send packet to a set of VRRP instances to advertise the device in the MASTER state.
- **Password**: the password string for VRRP accessing. VRRP in our device only supports authentication PASS.
- **Track interface**: Check local interface is up or down.
- **Track IP/Host**: the host or IP address to ping.
- **Track Interval**: ping interval.
- **Track Weight**: priority will be subtracted from the initial priority in case of ping IP/Host failure.
- **Status**: show VRRP status(MASTER/BACKUP).

3.5.3 Failover (link backup)

3.5.3.1 Failover basic settings



Failover Configuration

Failover Settings

Enable □

Back To High priority ☑

Current interface primary

Primary Configuration

Primary Wired_wan ▼

Host1 to ping

Host2 to ping

Ping timeout 1

Max Retries 10

Interval between ping 30

- **Enable**: Enable failover feature
- **Back to high priority**: If back to high priority is checked, when the high priority interface is available, using the high priority interface as WAN port.

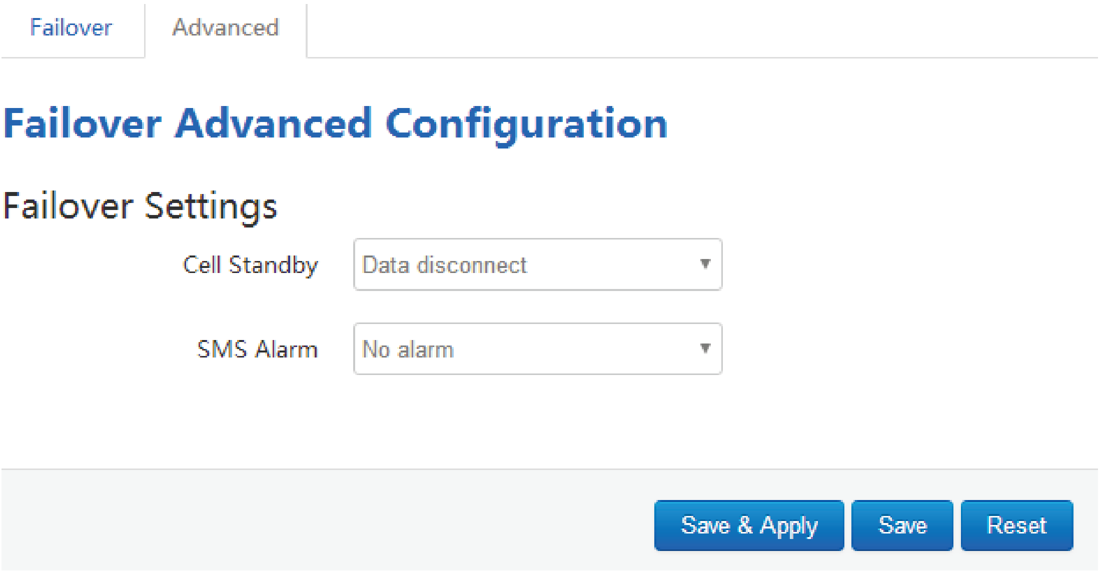
  If back to high priotrity is unchecked, even if the high priority interface is available, router will keep current interface as WAN port, it won't switch to high priority interface.

  Primary/Secondary/Third: interface which can be treat as WAN port. There are 4 options, Wired-WAN, Wifi_client, Cell_mobile, and None.
- **Current interface**: show working interface,
- **Host 1 to ping / Host 2 to ping**: It is external IP address or domain name for checking the connection is available.

- **Ping timeout**: If ping packet is sent, the response packet is not received before timeout, then this ping is failed.
- **Max retries**: If the ping is failed, the failed counter will add one. If the failed counter is bigger or equal to the Max retries, then system will say this interface is unavailable.

  If the ping is succeeding, failed counter will be reset to 0 at anytime.
- **Interval between ping**: The time between twice ping. The unit is second.

3.5.3.1 Failover Advanced settings



Failover Advanced Configuration

Failover Settings

Cell Standby: Data disconnect

SMS Alarm: No alarm

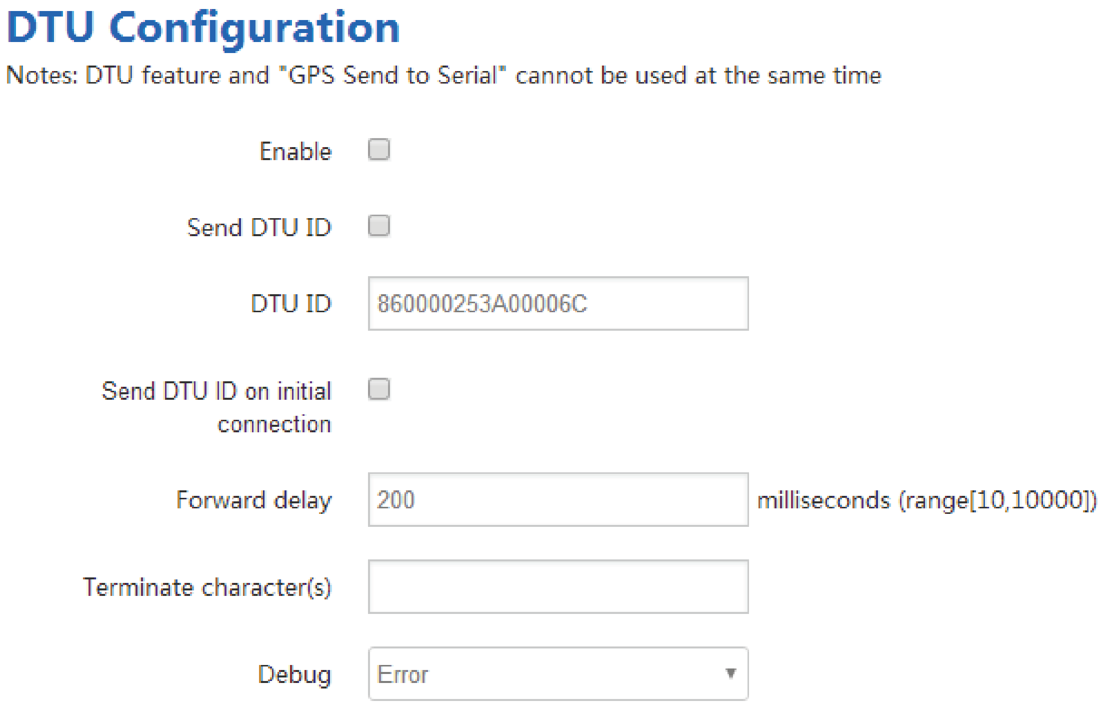
- **Cell Standby**: choose Cell status(connect, disconnect, or radio off) when cell acts as backup interface.
- **SMS Alarm**: if need to send SMS alarm when working interface switchover.

3.5.4 DTU

Notes:

1) This feature is for H700 with DTU option only.

2) This feature is conflict with “Connect Radio module” and “GPS send to serial”. Please disable the “DTU” feature if use “Connect Radio Module” or “GPS send to serial” feature.



DTU Configuration

Notes: DTU feature and "GPS Send to Serial" cannot be used at the same time

Enable □

Send DTU ID □

DTU ID 860000253A00006C

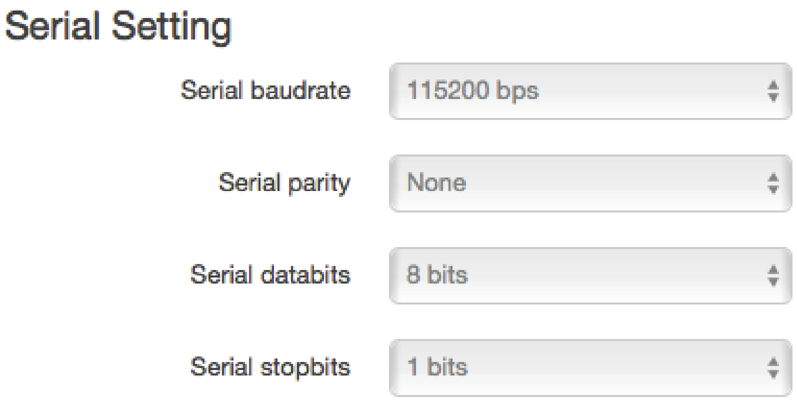
Send DTU ID on initial connection □

Forward delay 200 milliseconds (range[10,10000])

Terminate character(s)

Debug Error ▾

- **Enable**: Enable DTU feature.
- **Send DTU ID**: Send DTU ID at the front of packet.
- **DTU ID**: The default DTU ID is the SN of router, the final user can re-write it if necessary.
- **Send DTU ID on initial connection**: only .
- **Forward delay**: The unit is millisecond. It is delay time that forward data between serial port and network. Set forward delay to empty means no delay.
- **Terminate character**: split serial port data into different packages with terminate character. It can be a string, or hexadecimal which start as 0x,such as 0x0a0d.
- **Debug**: Debug level for log output.



Serial Setting

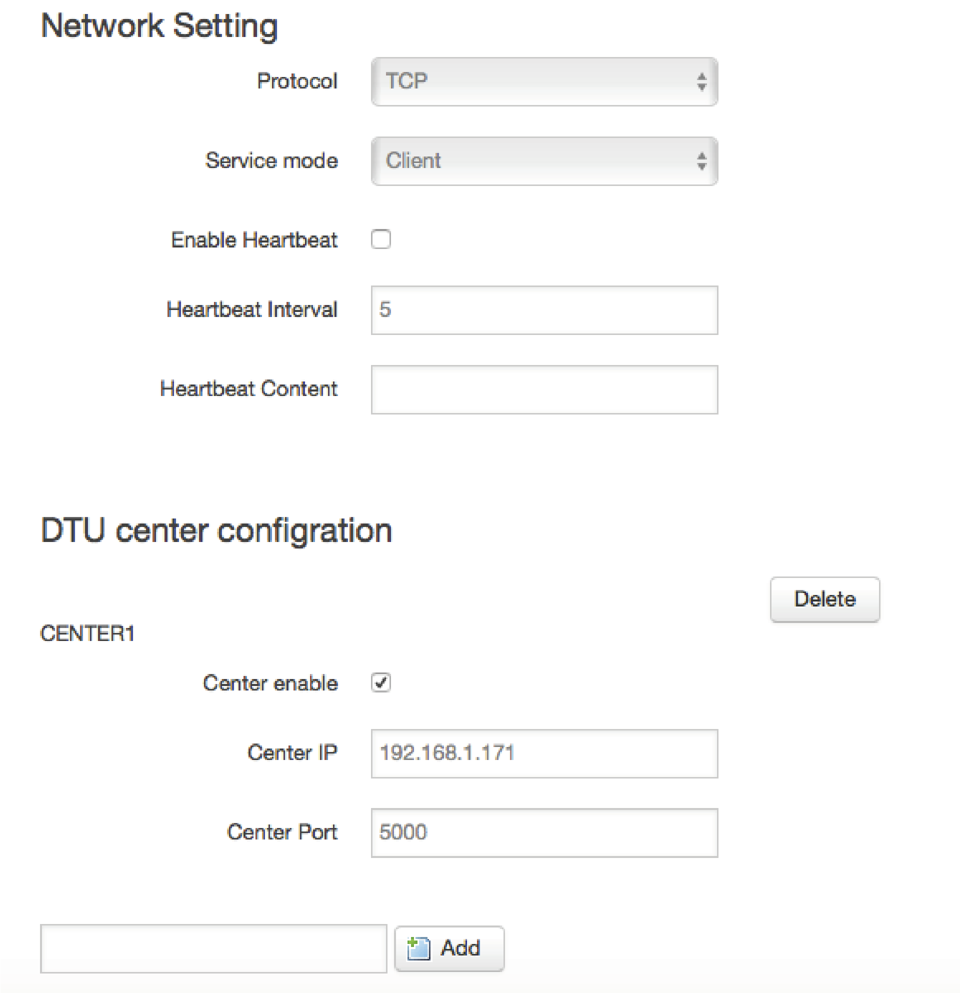
Serial baudrate 115200 bps

Serial parity None

Serial databits 8 bits

Serial stopbits 1 bits

- **serial baudrate**: support 300/1200/2400/4800/9600/19200/38400/57600/115200bps
- **serial parity:** support none/odd/even
- **serial databits:** support 7 bits and 8 bits
- **serial stopbit:** support 1 bits and 2 bits



Network Setting

Protocol: TCP

Service mode: Client

Enable Heartbeat: □

Heartbeat Interval: 5

Heartbeat Content:

DTU center configration

CENTER1

Center enable: ☑

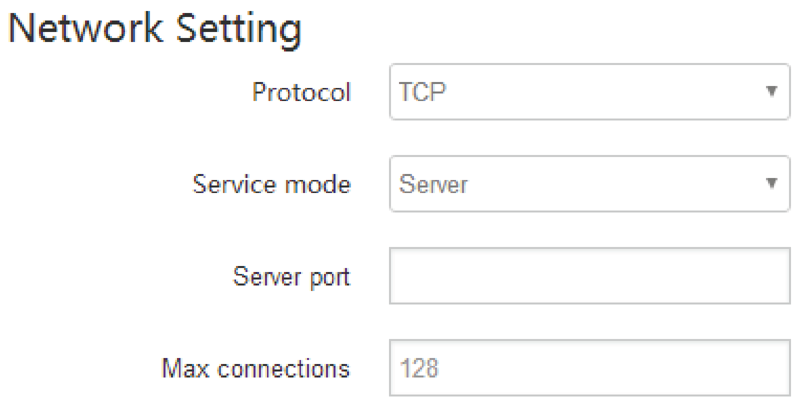
Center IP: 192.168.1.171

Center Port: 5000

- **Protocol:** TCP and UDP are supported
- **Service mode:** Client and Server are supported.
- **Enable heartbeat:** The heartbeat is used for connection keep alive.
- **Heartbeat interval:** The time between two heartbeat packet.
- **Heartbeat content:** The content of heartbeat packet.
- **DTU center Configuration:** DTU center is the DTU server, the final user can input the center name and click button "Add" to add a new center here.
- **If the center is not needed, the final user can click button "Delete" to delete it, or set it to disabled.**

⚠ **Notes:**

The maximum number of DTU center is 32.



Network Setting

Protocol: TCP ▾

Service mode: Server ▾

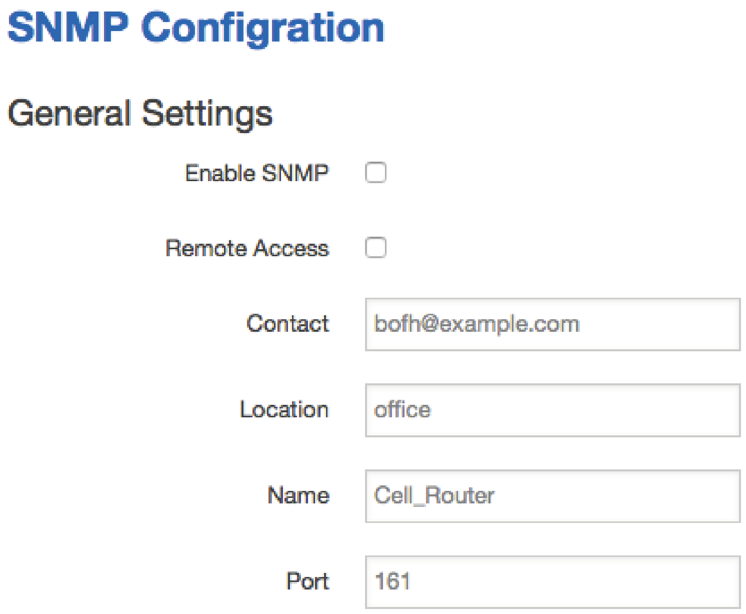
Server port:

Max connections: 128

When select Service mode as Server. There are 2 options.

- **Server port:** the port for client to connect.
- **Max connections:** the max amount of clients can connect.

3.5.5 SNMP



SNMP Configration

General Settings

Enable SNMP ☐

Remote Access ☐

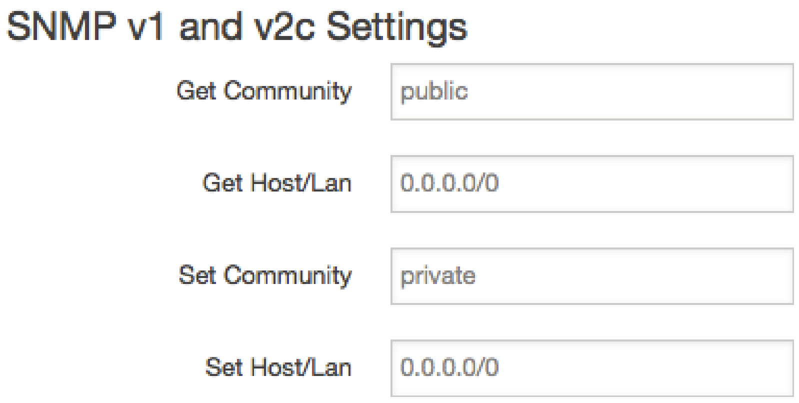
Contact: bofh@example.com

Location: office

Name: Cell_Router

Port: 161

- **Enable SNMP**: Enable SNMP feature
- **Remote Access**: Allow remote access SNMP. If it is unchecked, only LAN subnet can access SNMP.
- **Contact**: Set the contact information here
- **Location**: set router’s installation address.
- **Name**: Set the router’s in SNMP
- **Port**: SNMP service port, the default value is 161.



SNMP v1 and v2c Settings

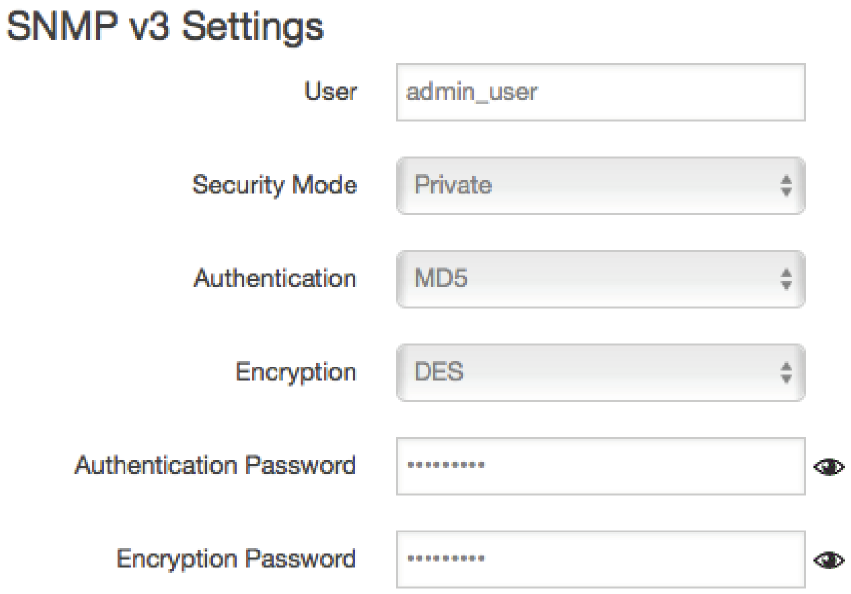
Get Community: public

Get Host/Lan: 0.0.0.0/0

Set Community: private

Set Host/Lan: 0.0.0.0/0

- **Get Community**: The username for SNMP get. The default value is public. SNMP get is read-only.
- **Get Host/Lan**: The network range to get the router via SNMP, default we set all as 0.0.0.0./0
- **Set Community**: The username for SNMP set. The default value is private. SNMP set is read-write.
- **Set Host/Lan**: The network range to set the router via SNMP, default we set all as 0.0.0.0./0



SNMP v3 Settings

User: admin_user

Security Mode: Private

Authentication: MD5

Encryption: DES

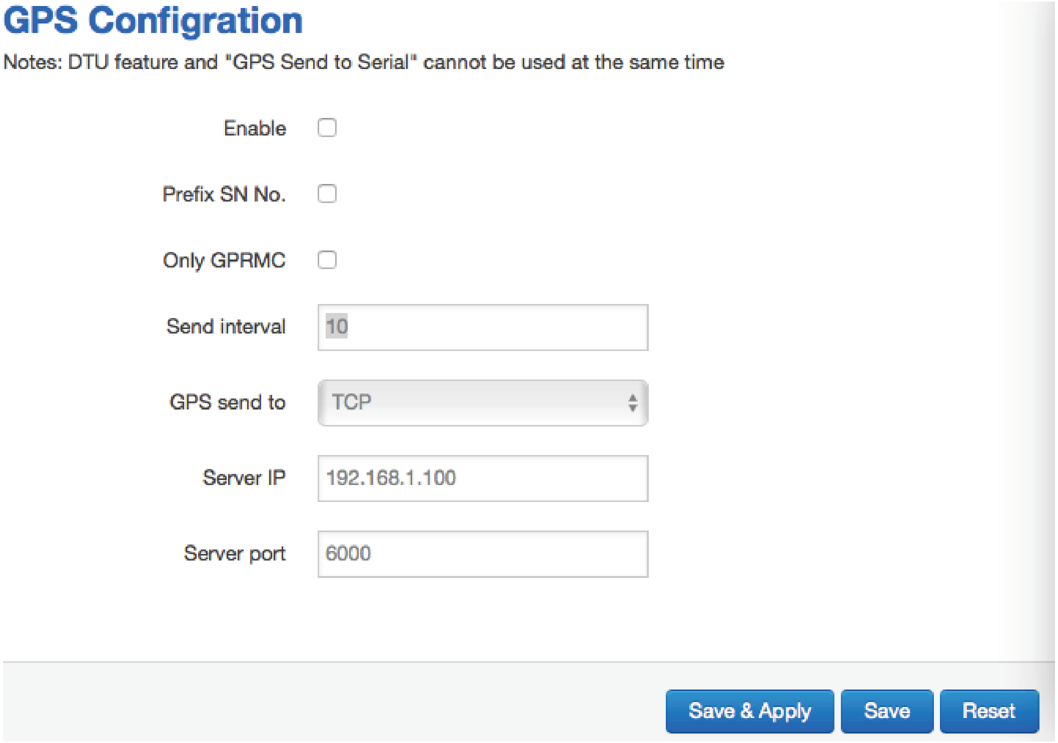
Authentication Password: •••••••••

Encryption Password: •••••••••

- **User**: SNMPv3 username
- **Security Mode**: three options: None, private and Authorized. If it is set to None, there is no password required. If it is set to Authorized, only Authentication method and password required.
- **Authentication**: Authentication method, two options: MD5 and SHA.
- **Encryption**: Encryption method, DES and AES supported.
- **Authentication password**: SNMPv3 authentication password, at least 8 characters is required.
- **Encryption password**: SNMPv3 encryption password, at least 8 characters is required.

After all items is setup, click button “Save & Apply” to enable SNMP functionality.

3.5.6 GPS



GPS Configration

Notes: DTU feature and "GPS Send to Serial" cannot be used at the same time

Enable □

Prefix SN No. □

Only GPRMC □

Send interval: 10

GPS send to: TCP

Server IP: 192.168.1.100

Server port: 6000

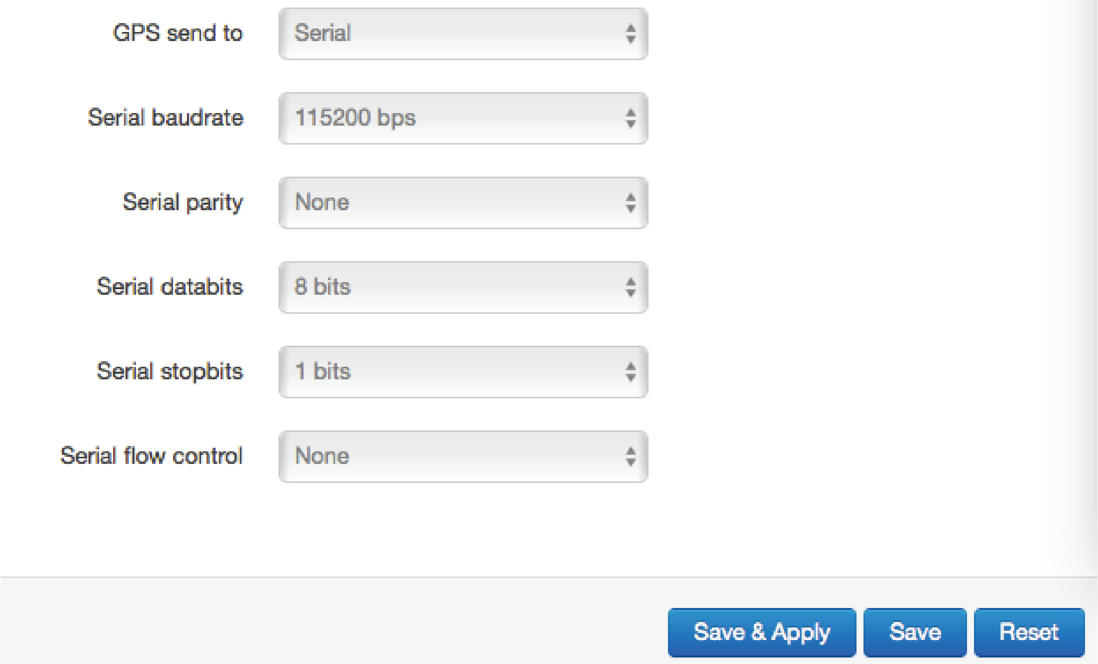
- **Enable**: please check it once you need use GPS feature.
- **Only GPRMC:** if check it, only send GPRMC data info (Longitude Latitude altitude)
- **Prefix SN No.:** if check it, add the router SN to the data packet
- **Send interval:** configure the frequency time of updated GPS data packet sending
- **GPS Send to**: Choose "Serial" or "TCP/IP" method. The router only receives the GPS signal, will not process it. It will just send the received GPS signal to your GPS processor devices or servers.

  If the GPS processor device is connected to the H700 Router via Serial Port, please choose "Serial".

  If the GPS processor device is a remote server, please choose "Serial".

➢ **GPS to TCP/UDP Settings**

- **Server IP**: fill in the correct destination server IP or domain name
- **Server port**: fill in the correct destination server port



GPS send to: Serial

Serial baudrate: 115200 bps

Serial parity: None

Serial databits: 8 bits

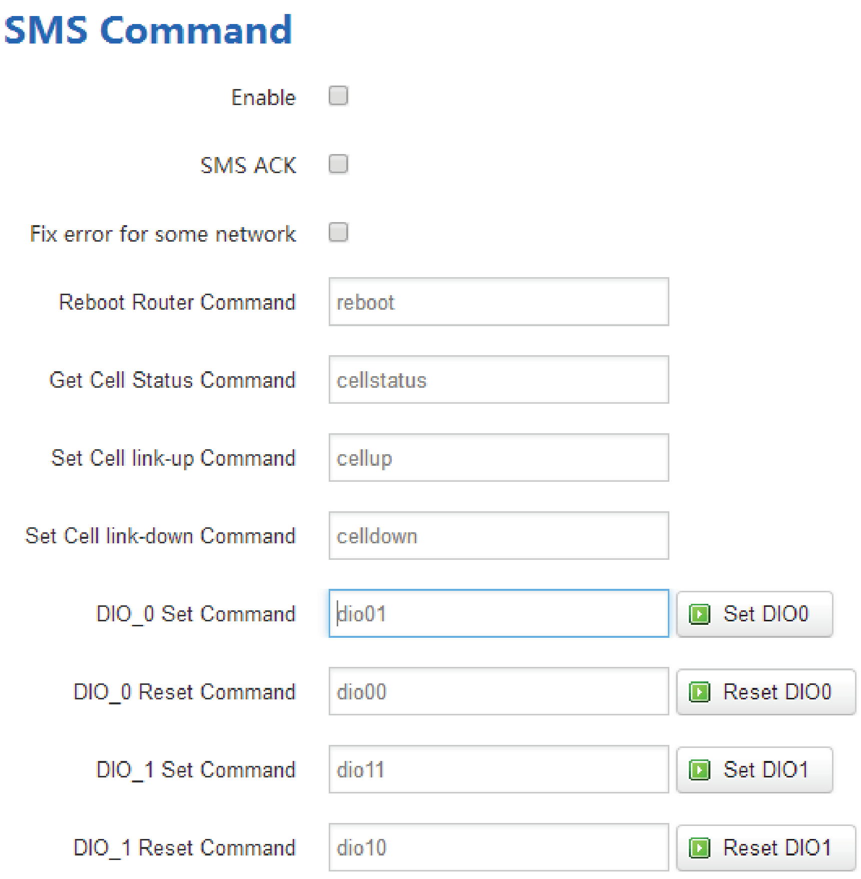
Serial stopbits: 1 bits

Serial flow control: None

- **serial baudrate:** 9600/19200/38400/57600/115200bps for choice
- **serial parity:** none/odd/even for choice
- **serial databits:** 7/8 for choice
- **serial stopbits:** 1/2 for choice
- **serial flow control:** none/hardware/software for choice

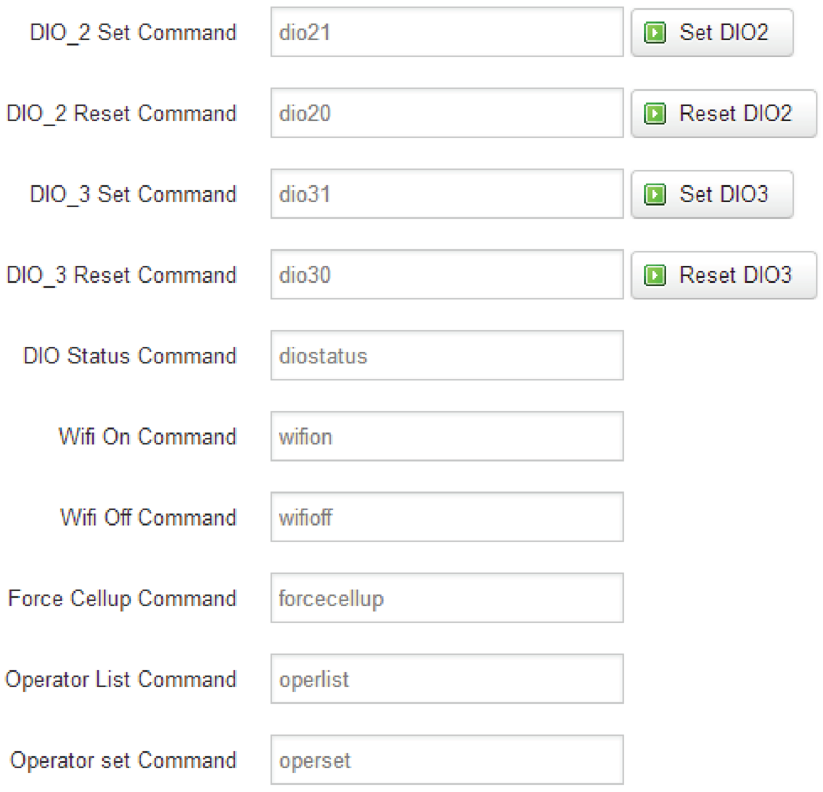
3.5.7 SMS

➢ **SMS Command**



SMS Command

Enable	□	
SMS ACK	□	
Fix error for some network	□	
Reboot Router Command	reboot	
Get Cell Status Command	cellstatus	
Set Cell link-up Command	cellup	
Set Cell link-down Command	celldown	
DIO_0 Set Command	dio01	Set DIO0
DIO_0 Reset Command	dio00	Reset DIO0
DIO_1 Set Command	dio11	Set DIO1
DIO_1 Reset Command	dio10	Reset DIO1

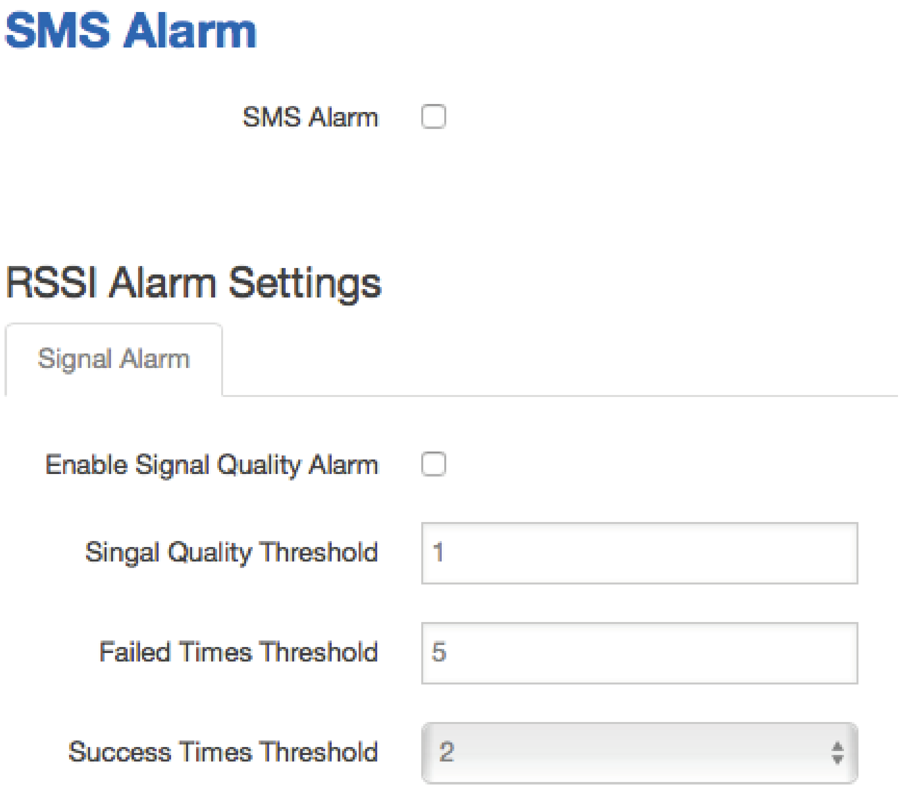


DIO_2 Set Command	dio21	Set DIO2
DIO_2 Reset Command	dio20	Reset DIO2
DIO_3 Set Command	dio31	Set DIO3
DIO_3 Reset Command	dio30	Reset DIO3
DIO Status Command	diostatus	
Wifi On Command	wifion	
Wifi Off Command	wifioff	
Force Cellup Command	forcecellup	
Operator List Command	operlist	
Operator set Command	operset	

- **Enable**: check it to enable SMS command feature.

- **SMS ACK**: If checked, the router will send command feedback to sender's phone number. If unchecked, the router will not send command feedback to sender's phone number.
- **Reboot Router Command**: input the command for "reboot" operation, default is "reboot".
- **Get Cell Status Command**: input the command for "router cell status checking" operation, default is "cellstatus". For example, if we send "cellstatus" to router, router will feedback the status to sender such as "Router SN: 086412090002 cell_link_up", which indicated the router SN number and Cell Working Status.
- **Set cell link-up Command**: input the command for "router cell link up" operation, default is "cellup". If router gets this command, the Router Cell will be online.
- **Set cell link-down Command**: input the command for "router cell link down" operation, default is "celldown". If router gets this command, the Router Cell will be offline.
- **DIO_0 Set Command**: set I/O port 0 to high(1). For SMS feature, please keep the parameter default.
- **DIO_0 Reset Command**: set I/O port 0 to low(0). For SMS feature, please keep the parameter default.
- **DIO_1 Set Command**: set I/O port 1 to high(1). For SMS feature, please keep the parameter default.
- **DIO_1 Reset Command**: set I/O port 1 to low(0). For SMS feature, please keep the parameter default.
- **DIO_2 Set Command**: set I/O port 2 to high(1). For SMS feature, please keep the parameter default.
- **DIO_2 Reset Command**: set I/O port 2 to low(0). For SMS feature, please keep the parameter default.
- **DIO_3 Set Command**: set I/O port 3 to high(1). For SMS feature, please keep the parameter default.
- **DIO_3 Reset Command**: set I/O port 3 to low(0). For SMS feature, please keep the parameter default.
- **Button Set/Reset DIO**: set DIO to high or low immediately.
- **DIO Status Command**: input the command for I/O port status. For SMS feature, please keep the parameter default.
- **Wifi on Command**: input the command for turning on Wifi. For SMS feature, please keep the parameter default.
- **Wifi off Command**: input the command for turning off Wifi. For SMS feature, please keep the parameter default.
- **Force Cellup Command**: if cell is down since traffic limit, it can be brought up by this command.
- **Operator List Command**: send modem operator list as SMS, it is only supported by some specific modems.
- **Operator set Command**: set modem to operator manually, it is only supported by some specific modems.

➢ **SMS alarm**



SMS Alarm

SMS Alarm ☐

RSSI Alarm Settings

Signal Alarm

Enable Signal Quality Alarm ☐

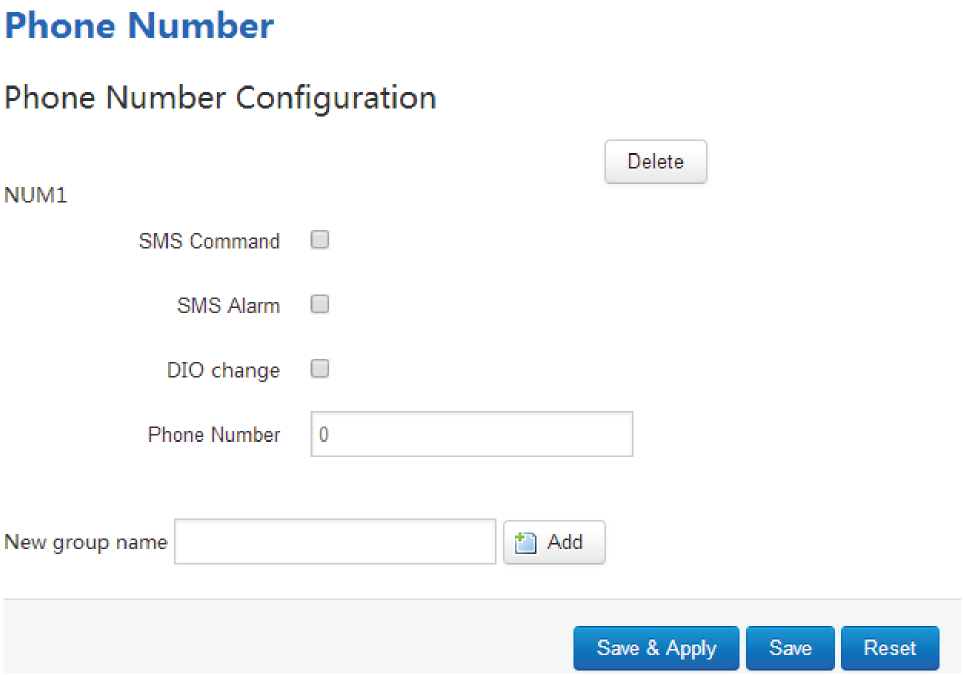
Singal Quality Threshold: 1

Failed Times Threshold: 5

Success Times Threshold: 2

- **SMS Alarm**: enable SMS alarm feature
- **Enable Signal Quality Alarm**: enable Signal Quality Alarm feature
- **Signal Quality Threshold**: When signal alarm is generated, if realtime signal strength is lower than Signal Quality Threshold, reset success counter to 0. If realtime signal strength is bigger than this threshold, success counter will add one.
  When signal alarm is not generated, if realtime signal strength is lower than Signal Quality Threshold, failed counter will add one. If realtime signal strength is bigger than this threshold, reset failed counter to 0.
- **Failed Times Threshold**: if failed counter is more than this threshold, a signal alarm will be generated.
- **Success Times Threshold**: if an signal alarm is generated, and the success counter is bigger or equal to Success Times Threshold, clear signal alarm.

➢ **Phone Number**



Phone Number

Phone Number Configuration

NUM1

SMS Command □

SMS Alarm □

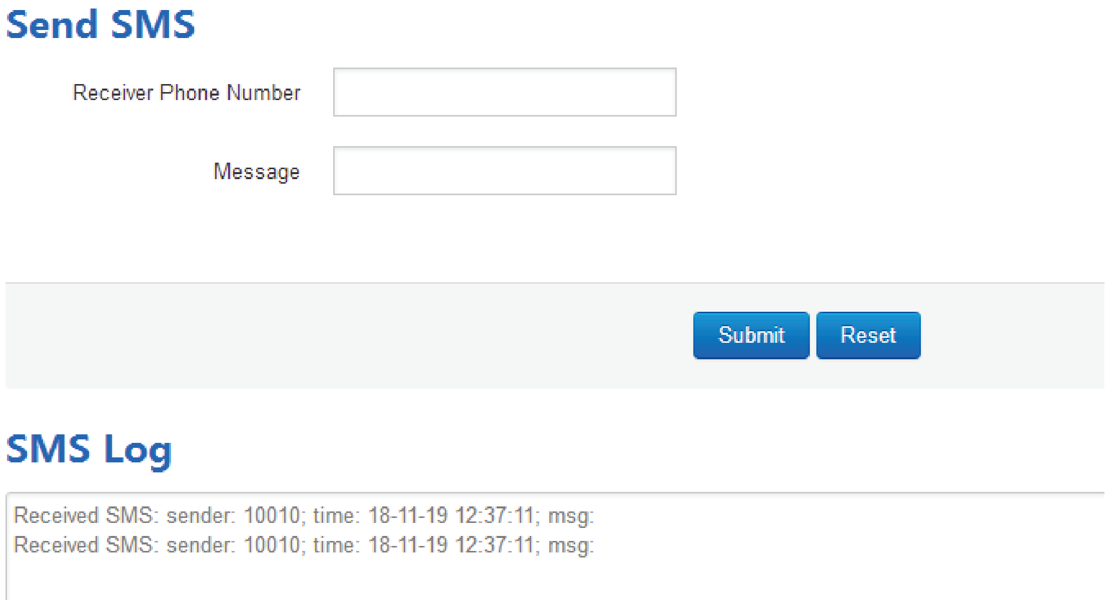
DIO change □

Phone Number: 0

New group name:

- **Add Phone number**: input a name and click button “Add” to add a new Phone number.
- **Delete Phone number**: click button “Delete”.
- **SMS command**: enable SMS command feature on this phone number.
- **SMS alarm**: this phone number can receive SMS Alarm.
- **DIO change**: DIO change alarm can be sent to this phone number.

➢ **SMS**



Send SMS

Receiver Phone Number:

Message:

SMS Log

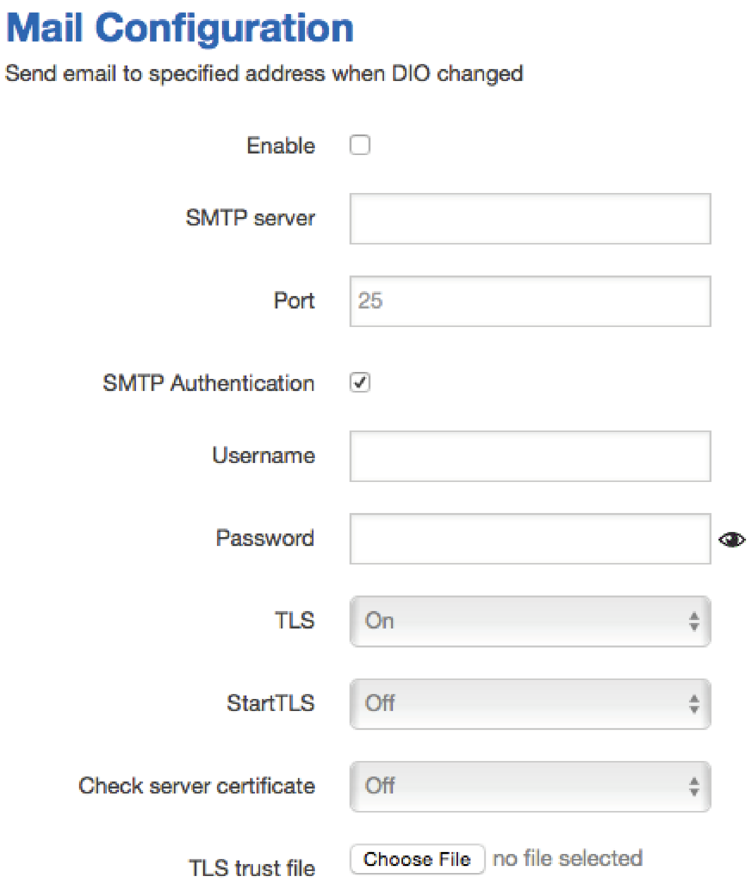
```
Received SMS: sender: 10010; time: 18-11-19 12:37:11; msg:
Received SMS: sender: 10010; time: 18-11-19 12:37:11; msg:
```

- **Receiver Phone Number**: the Phone number that receive message.
- **Message**: the content of message

- **Submit**: click button “Submit” to send message immediately.
- **SMS Log**: SMS send and receive log.

➢ **DIO Mail**

Send email to receiver when DIO change.

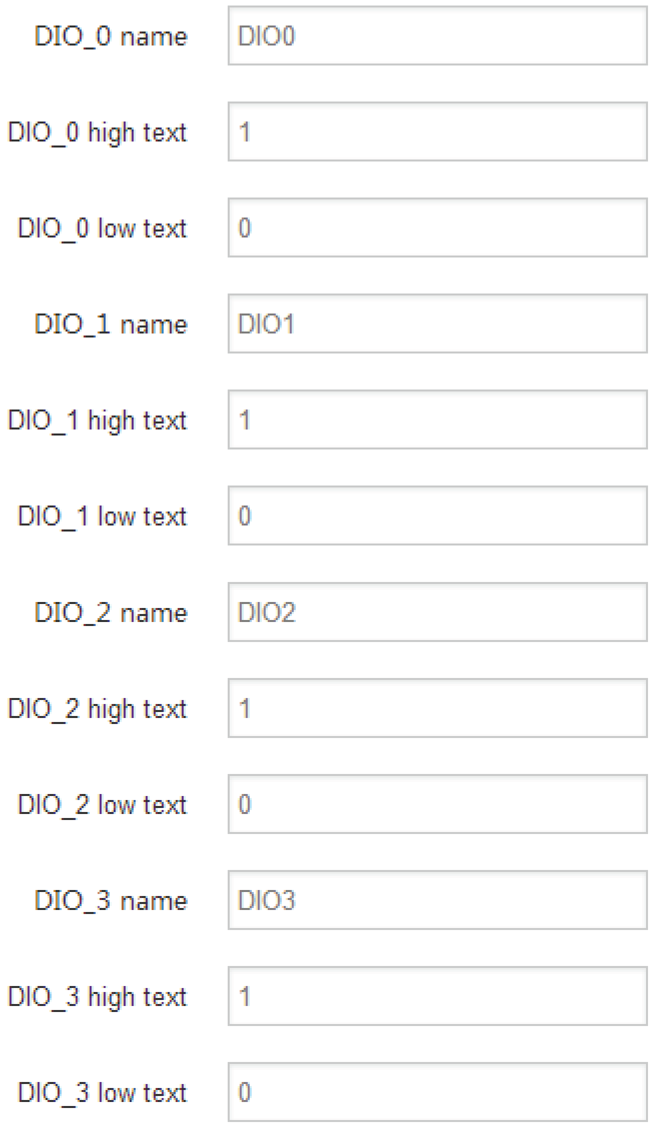


Mail Configuration

Send email to specified address when DIO changed

Enable	☐
SMTP server	
Port	25
SMTP Authentication	☑
Username	
Password	
TLS	On
StartTLS	Off
Check server certificate	Off
TLS trust file	Choose File no file selected

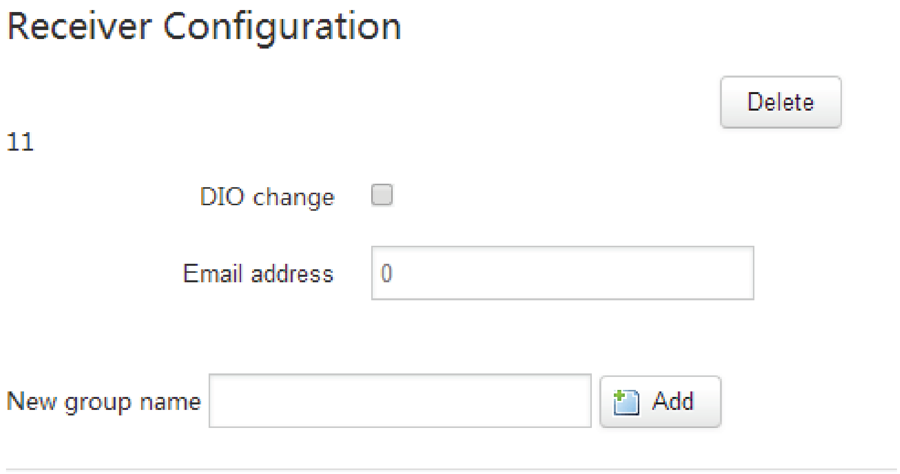
- **Enable**: activate DIO Mail functionality.
- **SMTP server**: SMTP server IP address or URL.
- **Port**: SMTP server port.
- **SMTP Authentication**: If SMTP server requires SMTP Authentication, enable it.
- **Username**: Username for SMTP authentication.
- **Password**: Password for SMTP authentication.
- **TLS**: Enable or disable TLS (also known as SSL) for secured connections.
- **StartTLS**: Choose the TLS variant: start TLS from within the session (‘on’, default), or tunnel the session through TLS (‘off’)..
- **Check server certificate**: Activate server certificate verification using a list of truted Certification Authorities (CAs).
- **TLS trust file**: Activate server certificate verification using trusted Certification Authorities (CAs).



DIO_0 name	DIO0
DIO_0 high text	1
DIO_0 low text	0
DIO_1 name	DIO1
DIO_1 high text	1
DIO_1 low text	0
DIO_2 name	DIO2
DIO_2 high text	1
DIO_2 low text	0
DIO_3 name	DIO3
DIO_3 high text	1
DIO_3 low text	0

The default email title is “[DIOx] changed”, and content is SN:8600000000, [DIOx] is changed from [value0] to value[1].

Configure email title and content, replace string in [ ].



Receiver Configuration

11

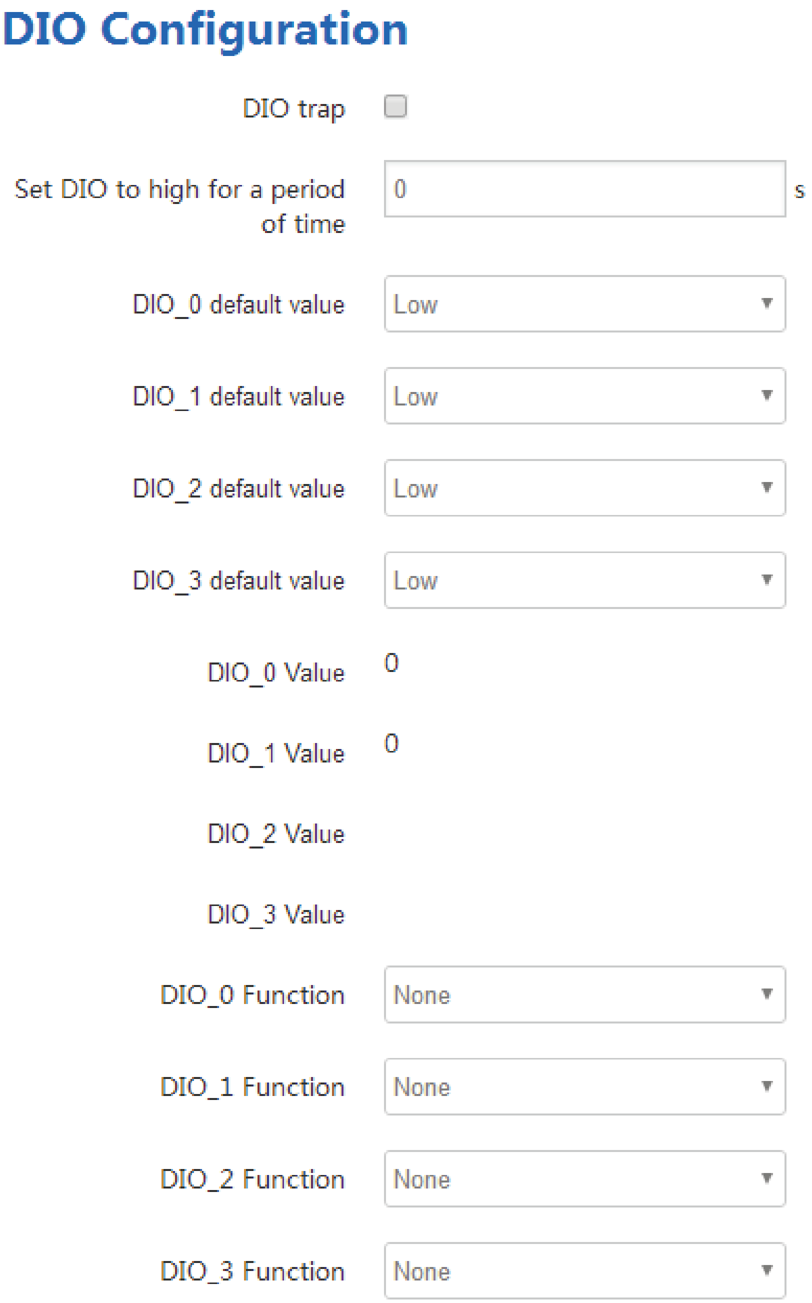
DIO change □

Email address 0

New group name

Configure receiver address.

- **DIO Default**



DIO Configuration

DIO trap	□
Set DIO to high for a period of time	0 s
DIO_0 default value	Low ▾
DIO_1 default value	Low ▾
DIO_2 default value	Low ▾
DIO_3 default value	Low ▾

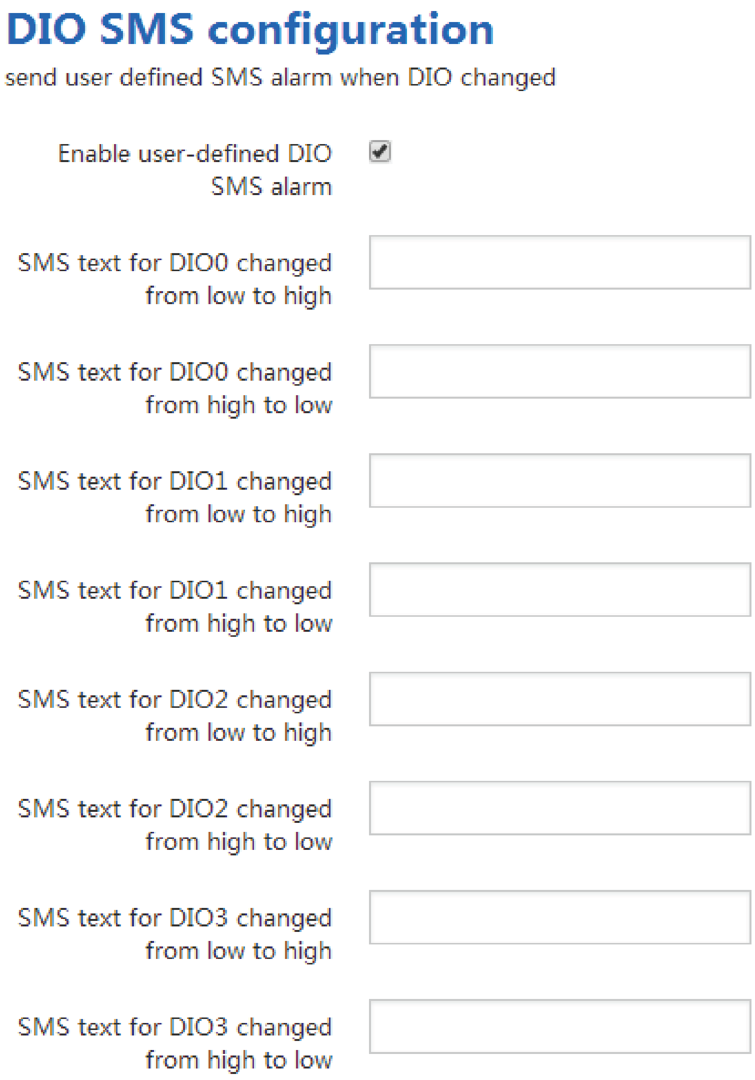
DIO_1 Value	0
DIO_2 Value	
DIO_3 Value	
DIO_0 Function	None ▾
DIO_1 Function	None ▾
DIO_2 Function	None ▾
DIO_3 Function	None ▾

- **DIO trap**: send SNMP trap when DIO changed from 1 to 0, or 0 to 1.
- **Set DIo to high for a period of time**: If set DIO to high after a period of time, DIO will goto low automatically, value 0 means disable.
- **DIO_0 default value**: DIO default value is low(0). if set to high(1), when device is up, it will be set to high automatically.
- **DIO_1 default value**: DIO default value is low(0). if set to high(1), when device is up, it will be set to high automatically.
- **DIO_2 default value**: DIO default value is low(0). if set to high(1), when device is up, it will be set to high automatically.
- **DIO_3 default value**: DIO default value is low(0). if set to high(1), when device is up, it will be set to high automatically.

- **DIO_0 Value**: DIO current value, 0 means low, and 1 means high.
- **DIO_1 Value**: DIO current value, 0 means low, and 1 means high.
- **DIO_2 Value**: DIO current value, 0 means low, and 1 means high.
- **DIO_3 Value**: DIO current value, 0 means low, and 1 means high.
- **DIO_0 Function**: DIO function can be set to None, GPS and Wi-Fi. DIO value is set to high to turn on functionality, be set to low to turn off it. If the value is None, it will do nothing.
- **DIO_1 Function**: DIO function can be set to None, GPS and Wi-Fi. DIO value is set to high to turn on functionality, be set to low to turn off it. If the value is None, it will do nothing.
- **DIO_2 Function**: DIO function can be set to None, GPS and Wi-Fi. DIO value is set to high to turn on functionality, be set to low to turn off it. If the value is None, it will do nothing.
- **DIO_3 Function**: DIO function can be set to None, GPS and Wi-Fi. DIO value is set to high to turn on functionality, be set to low to turn off it. If the value is None, it will do nothing.

➢ DIO sms



DIO SMS configuration

send user defined SMS alarm when DIO changed

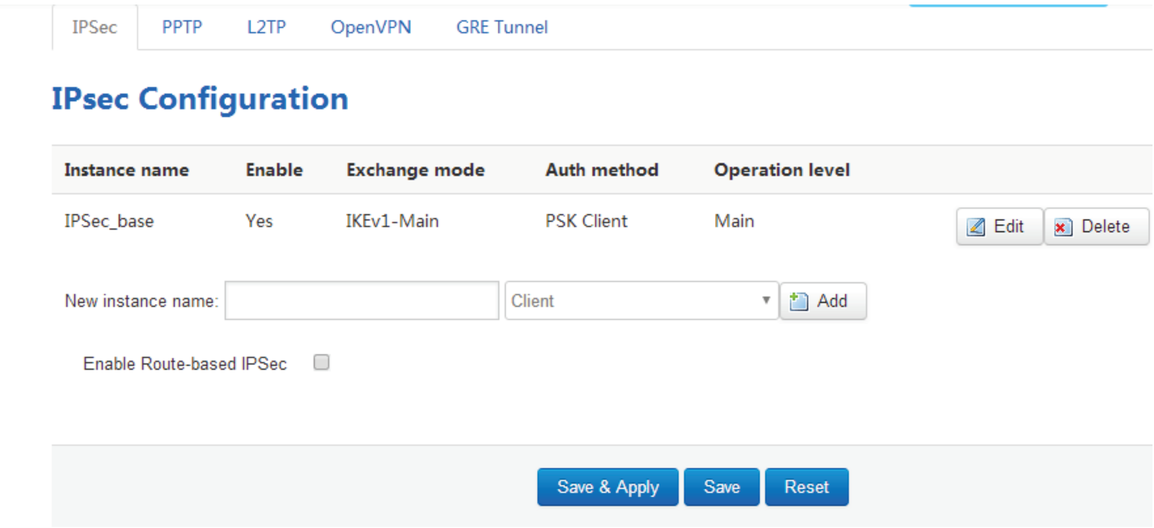
Enable user-defined DIO SMS alarm	☑
SMS text for DIO0 changed from low to high	
SMS text for DIO0 changed from high to low	
SMS text for DIO1 changed from low to high	
SMS text for DIO1 changed from high to low	
SMS text for DIO2 changed from low to high	
SMS text for DIO2 changed from high to low	
SMS text for DIO3 changed from low to high	
SMS text for DIO3 changed from high to low	

When DIO value is changed, send SMS text accordingly. It must enable DIO change on phone number. If the user-defined text is empty, it will send system default SMS to phone number.

The default format is SN:[86000000000], [DIOx] is changed from [value1] to [value0].

3.5.8 VPN

3.5.8.1 IPSEC



IPsec Configuration

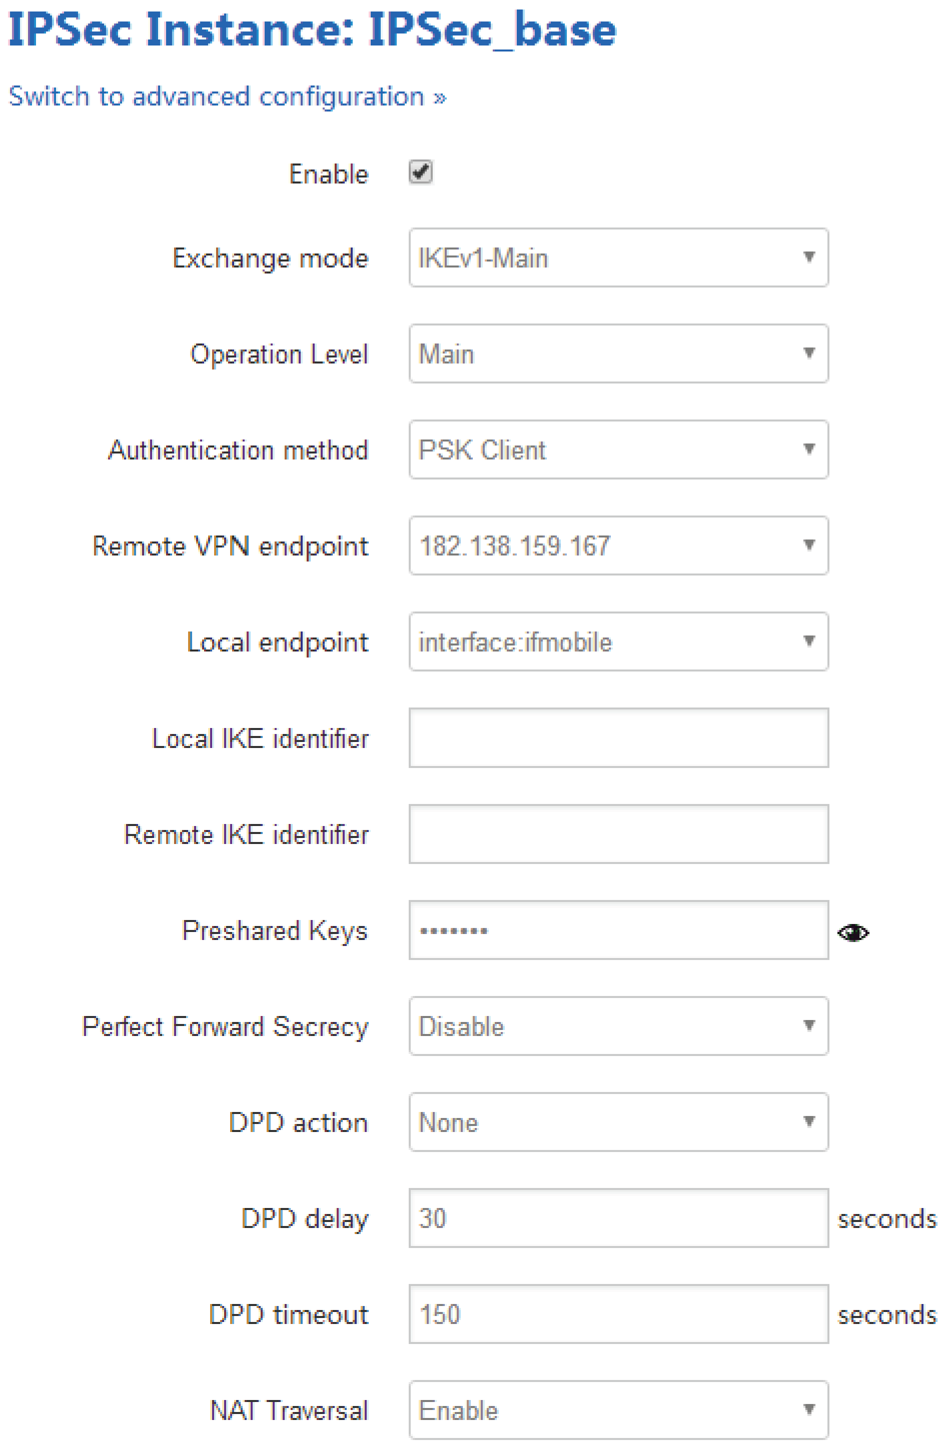
Instance name	Enable	Exchange mode	Auth method	Operation level	
IPSec_base	Yes	IKEv1-Main	PSK Client	Main	Edit Delete

New instance name: Client Add

Enable Route-based IPSec □

This page is a list of configured IPSec instance and their state. Click button “Edit” to modify it, or click button “Delete” to delete an instance.

The default setting is Policy-based IPSec, if Enable Route-based IPSec is ticked, after save & apply, it will switch to Route-based IPSec.



IPSec Instance: IPSec_base

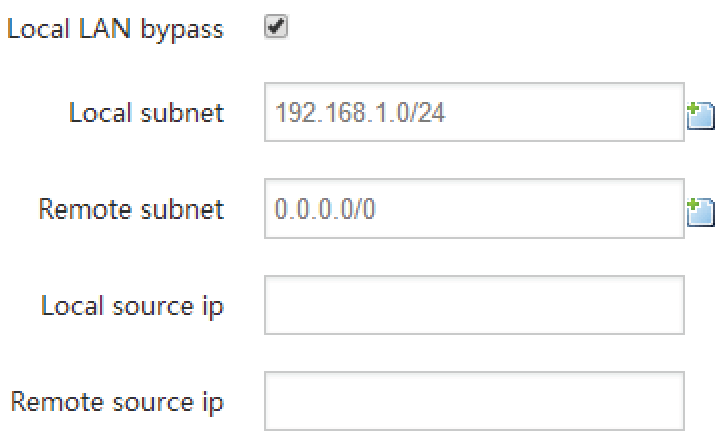
Switch to advanced configuration »

Enable	☑
Exchange mode	IKEv1-Main ▾
Operation Level	Main ▾
Authentication method	PSK Client ▾
Remote VPN endpoint	182.138.159.167 ▾
Local endpoint	interface:ifmobile ▾
Local IKE identifier	
Remote IKE identifier	
Preshared Keys	•••••••
Perfect Forward Secrecy	Disable ▾
DPD action	None ▾
DPD delay	30 seconds
DPD timeout	150 seconds
NAT Traversal	Enable ▾

- **Enable**: enable IPSEC feature
- **Exchange mode**: IKEv1-Main, IKEv1-Aggressive, and IKEv2-Main mode are supported.
- **Operation Level**: for IPSec backup. One instance is Main then another instance is Backup. If Main instance is down switch to backup instance.
- **Authentication method**: PSK Client, PSK Server, RSA X.509 Client and RSA X.509 Server. Client is the device which starts the IPSEC connection.
- **Remote VPN endpoint**: domain name or IP address of the remote endpoint. It can be

visited from internet.

- **Local endpoint**: domain name or IP address or interface name of this device.
- **Local IKE identifier:** Identity to use for the local device authentication.
- **Remote IKE identifier:** Identity to use for the remote device authentication.
- **Preshared Keys**: pre-shared key authentication. As known as PSK.
- **Perfect Forward Secrecy:** whether Perfect Forward Secrecy of keys is desired on the connection's keying channel
- **DPD action:** controls the use of the Dead Peer Detection protocol (DPD, RFC 3706) where R_U_THERE notification messages(IKEv1) or empty INFORMATIONAL messages (IKEv2) are periodically sent in order to check the liveliness of the IPsec peer. The values clear, hold, and restart all activate DPD and determine the action to perform on a timeout. With clear the connection is closed with no further actions taken. hold installs a trap policy, which will catch matching traffic and tries to re-negotiate the connection on demand. restart will immediately trigger an attempt to re-negotiate the connection. The default is none which disables the active sending of DPD messages
- **DPD delay**: defines the period time interval with which R_U_THERE messages/INFORMATIONAL exchanges are sent to the peer
- **DPD timeout**: defines the timeout interval, after which all connections to a peer are deleted in case of inactivity.
- **NAT Traversal**: indicate device is behind a NAT device or not.



Local LAN bypass ☑

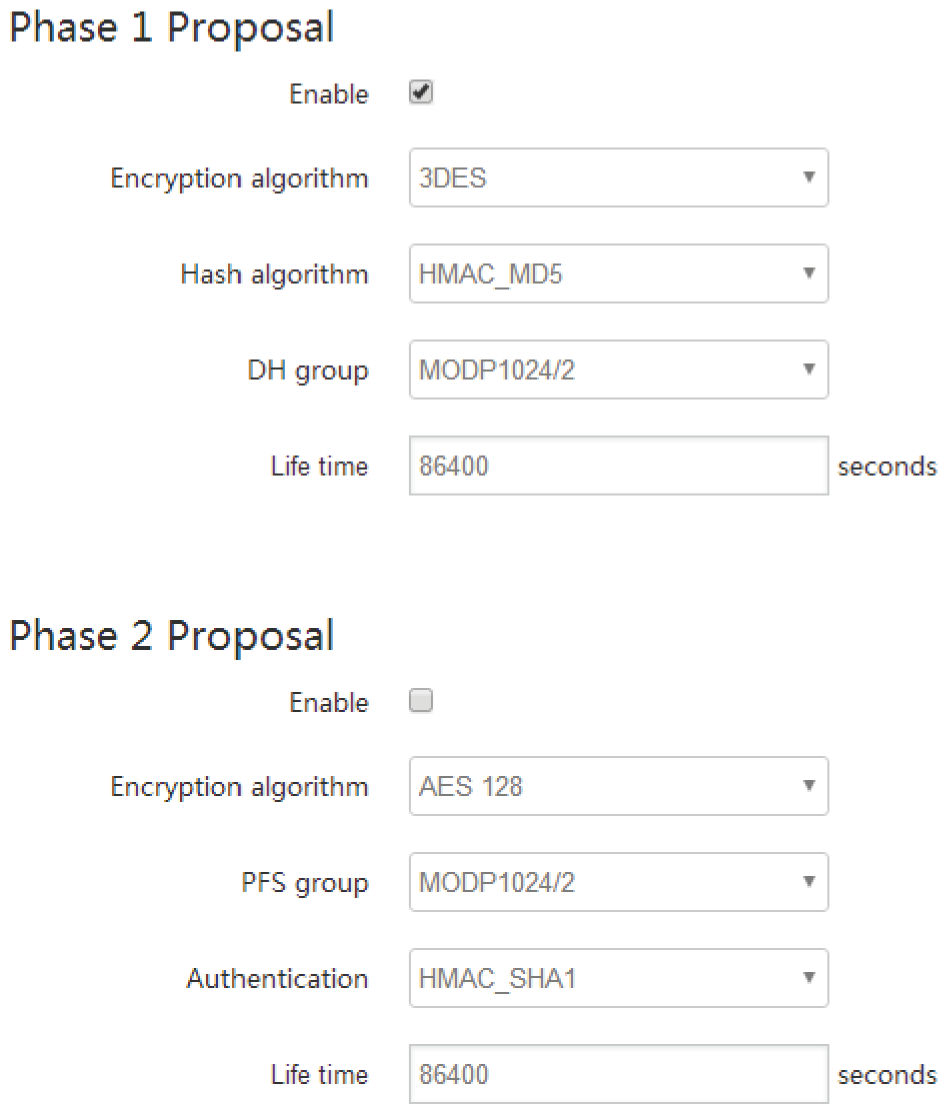
Local subnet 192.168.1.0/24

Remote subnet 0.0.0.0/0

Local source ip

Remote source ip

- **Local subnet**: the subnet of local which connects to IPSEC VPN.
- **Remote subnet**: the subnet of remote which connects to IPSEC VPN.
- **Local source ip**: The internal source IP of local device to use in a tunnel, also known as virtual IP
- **Remote source ip**: The internal source IP of remote device to use in a tunnel, also known as virtual IP



Phase 1 Proposal

Enable	☑
Encryption algorithm	3DES
Hash algorithm	HMAC_MD5
DH group	MODP1024/2
Life time	86400 seconds

Phase 2 Proposal

Enable	□
Encryption algorithm	AES 128
PFS group	MODP1024/2
Authentication	HMAC_SHA1
Life time	86400 seconds

Notes:

All the configuration in Phase 1 Proposal and Phase 2 Proposal must match with the remote endpoint to establish IPSEC connection.

3.5.8.2 PPTP

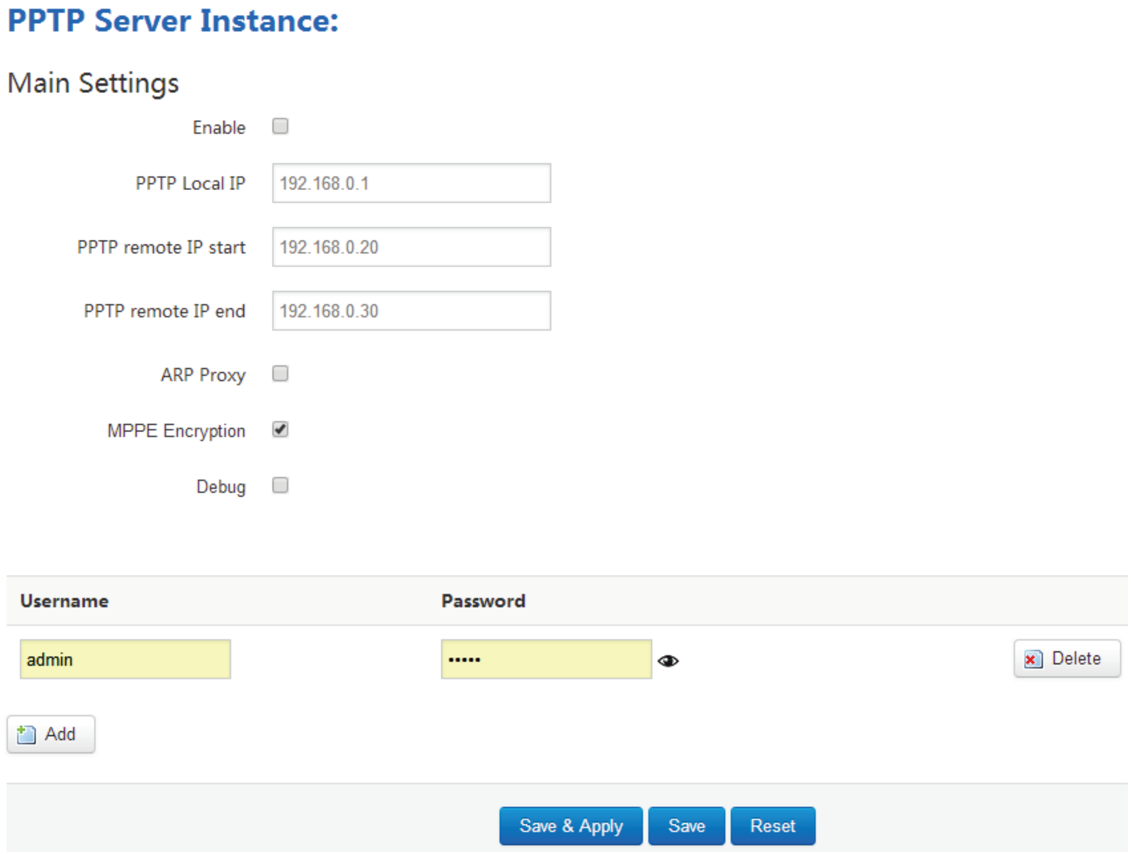
Restart module when PPTP connects failed ☑

- **Enable**: enable this instance.
- **Server**: domain name or IP address of PPTP server.
- **Username**: server authentication user name.
- **Password**: server authentication password.
- **Remote LAN subnet**: the remote subnet which can be access via PPTP tunnel.such as 192.168.10.0
- **Remote LAN netmask**: the netmask for remote LAN subnet. Such as 255.255.255.0
- **MTU**: maximum transmission unit.
- **Keep Alive**: Number of unanswered echo requests before considering the peer dead. The interval between echo requests is 5 seconds.
- **Use DNS servers advertised by peer**: If unchecked, the advertised DNS server addresses are ignored.

- **MPPE Encryption**: Microsoft Point-to-Point Encryption.
- **Debug**: add verbose PPTP log in system log.
- **Restart module when PPTP connects failed**: in some network PPTP cannot connect until restart module.

➢ **PPTP Server Configuration**



PPTP Server Instance:

Main Settings

Enable	□
PPTP Local IP	192.168.0.1

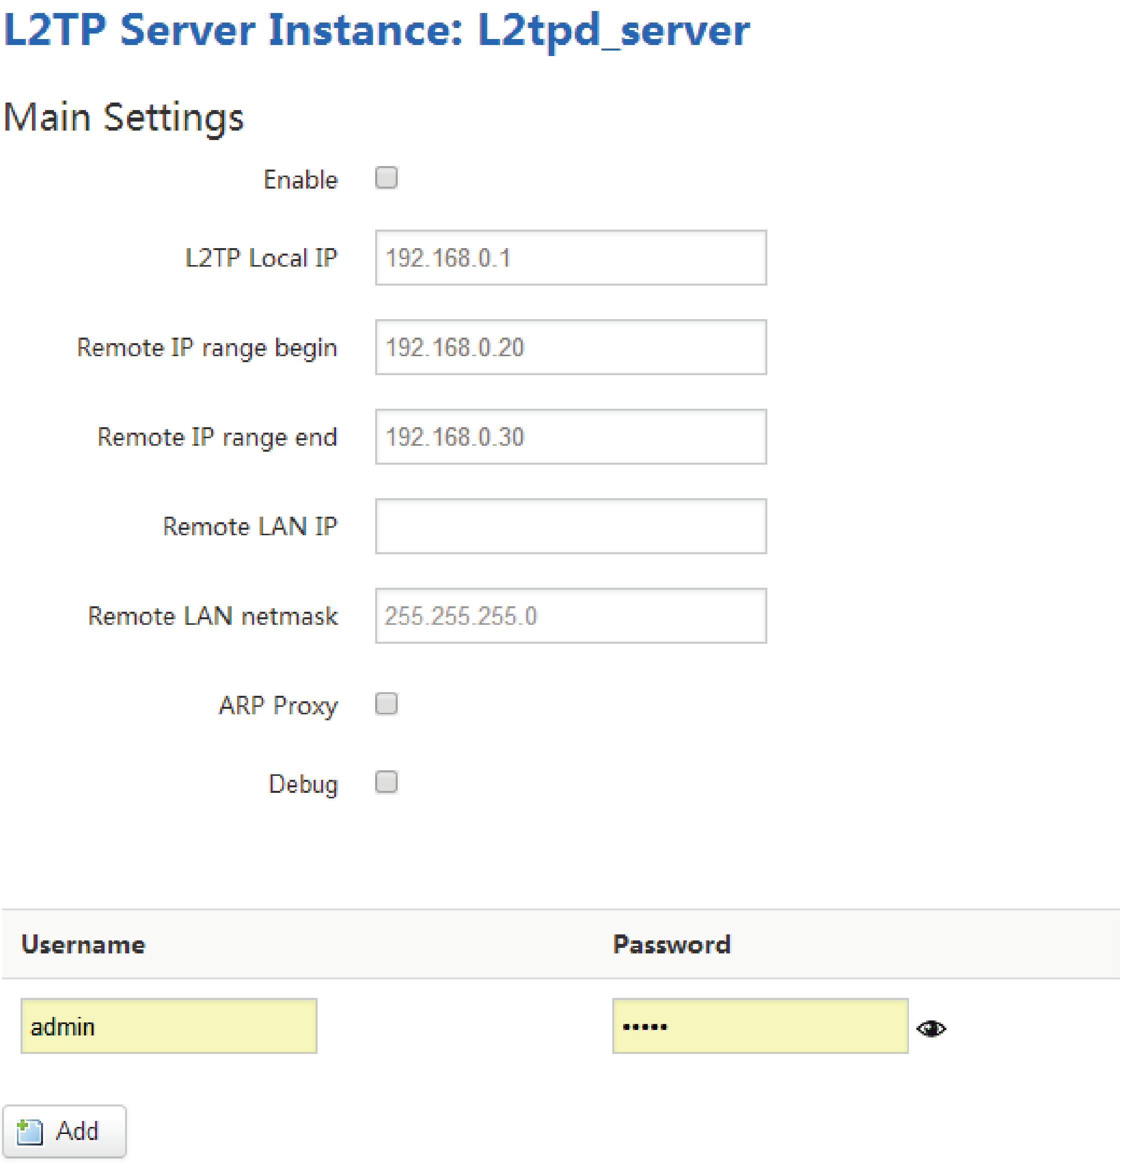
Main Settings

Enable	□
Server	
Username	
Password	
Remote LAN subnet	
Remote LAN netmask	
MTU	1500
Keep Alive	5
Debug	□

- **Enable**: enable this L2TP instance.
- **Server**: domain name or IP address of L2TP server.
- **Username**: server authentication user name.
- **Password**: server authentication password.
- **Remote LAN subnet**: the remote LAN subnet can be accessed via L2TP tunnel, such as 192.168.10.0
- **Remote LAN netmask**: the netmask for remote LAN subnet, such as 255.255.255.0

- **MTU**: maximum transmission unit.
- **Keep Alive**: Number of unanswered echo requests before considering the peer dead. The interval between echo requests is 5 seconds.
- **Checkup Interval**: Number of seconds to pass before checking if the interface is not up since the last setup attempt and retry the connection otherwise. Set it to a value sufficient for a successful L2TP connection for you. It's mainly for the case that netifd sent the connect request yet xl2tpd failed to complete it without the notice of netifd.
- **Debug**: add L2TP verbose log into system log

➢ **L2TP Server configuration**



L2TP Server Instance: L2tpd_server

Main Settings

Enable	□
L2TP Local IP	192.168.0.1
Remote IP range begin	192.168.0.20
Remote IP range end	192.168.0.30
Remote LAN IP	
Remote LAN netmask	255.255.255.0
ARP Proxy	□
Debug	□

Username	Password
admin	•••••

- **Local IP**: indicate server's IP address.
- **Remote IP range begin**: the remote IP address leases start
- **Remote IP range end**: the remote IP address lease end.
- **Remote LAN IP**: the remote LAN subnet can be accessed via L2TP tunnel, such as

192.168.10.0.

- **Remote LAN netmask**: the mask of L2TP client IP, the default value is 255.255.255.0
- **ARP Proxy**: it allows remote L2TP client to access local LAN subnet. And the remote IP range should be included in LAN subnet. Such as local LAN subnet is 192.168.1.0/24, then configure Remote IP range begin to 192.168.1.20 and Remote IP range end to 192.168.1.30, and enable ARP Proxy.
- **Debug**: add L2TP verbose log into system log.
- **Username**: server authentication username
- **Password**: server authentication password.

3.5.8.4 OpenVPN

This page is a list of configured OpenVPN instance and their state. You can click button “Edit” to modify it, or click button “Delete” to delete an instance.

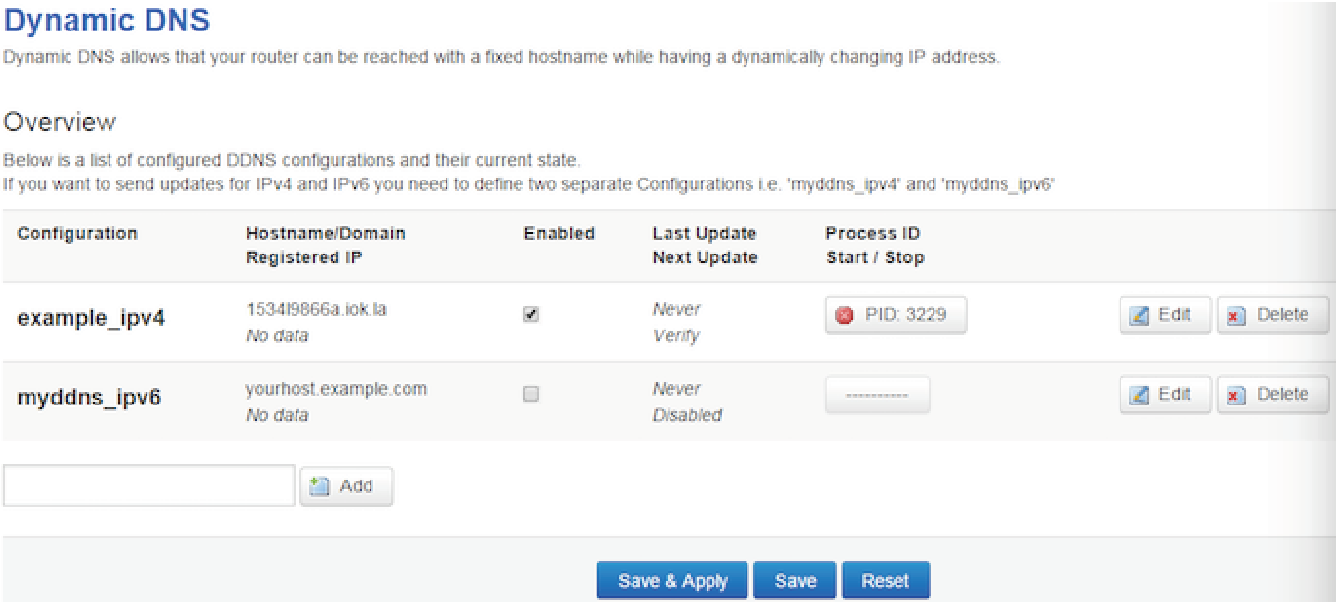
- **Peer IP address**: Remote WAN IP address.
- **Remote Network IP**: remote LAN subnet address that can be accessed via GRE tunnel, such as 192.168.10.0
- **Remote Netmask**: remote LAN subnet mask. Such as 255.255.255.0.
- **Local Tunnel IP**: Virtual IP address. It cannot be in same subnet as LAN network.
- **Local Tunnel Mask**: Virtual IP mask.
- **Local Interface**: bond a specific interface for GRE tunnel.
- **Keepalive**: None, receive only, send and receive. If value is None, GRE tunnel will remain up, if value is receive only , if no GRE keepalive message received for peer device, it will set tunnel to up. If value is send and receive, it will send keepalive message to remote peer, and also receive keepalive message from peer.

3.5.9 DDNS

DDNS allows that router can be reached with a fixed domain name while have a dynamically changing IP address.



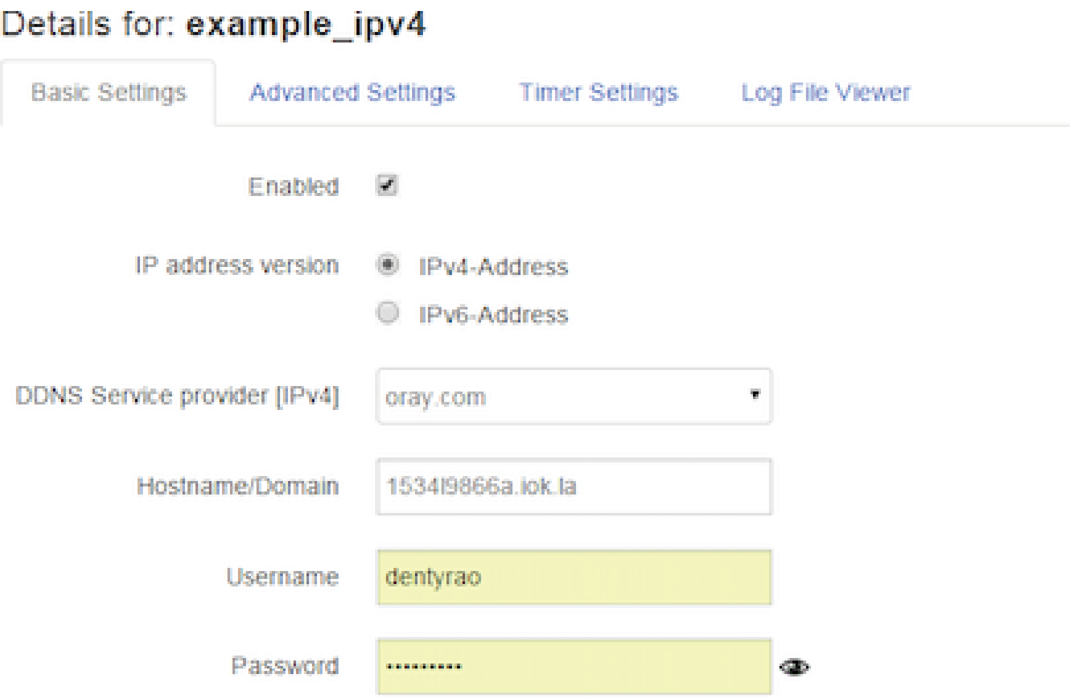
Dynamic DNS

Dynamic DNS allows that your router can be reached with a fixed hostname while having a dynamically changing IP address.

Overview

Below is a list of configured DDNS configurations and their current state.
If you want to send updates for IPv4 and IPv6 you need to define two separate Configurations i.e. 'myddns_ipv4' and 'myddns_ipv6'

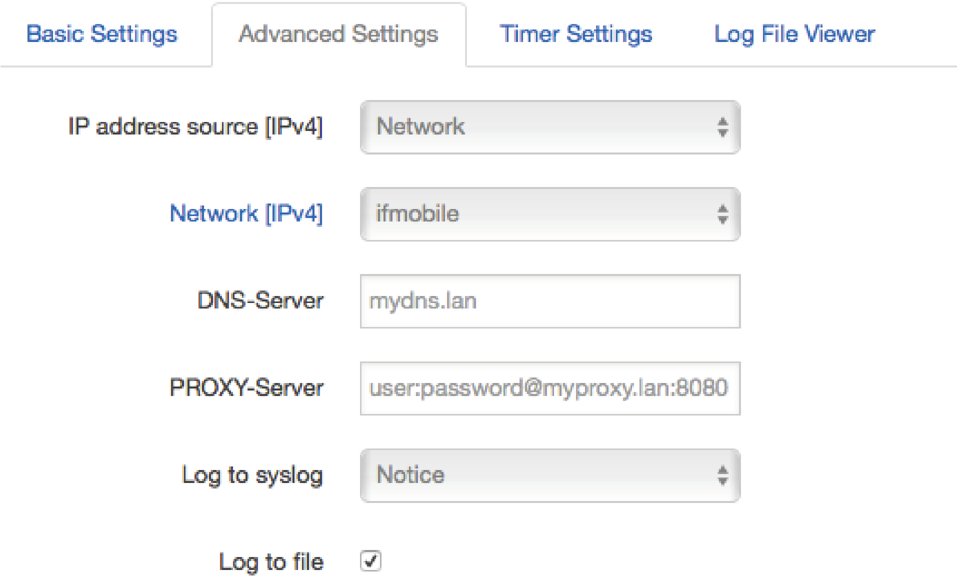
Configuration	Hostname/Domain Registered IP	Enabled	Last Update Next Update	Process ID Start / Stop		
example_ipv4	153419866a.iok.la No data	☑	Never Verify	PID: 3229	Edit	Delete
myddns_ipv6	yourhost.example.com No data	□	Never Disabled	----------	Edit	Delete



Details for: example_ipv4

Enabled	☑
IP address version	● IPv4-Address ○ IPv6-Address
DDNS Service provider [IPv4]	oray.com
Hostname/Domain	153419866a.iok.la
Username	dentyrao
Password	••••••••••

- **Enabled**: enable this instance.
- **IP address version**: IPv4 and IPv6 supported
- **DDNS Service provider**: select a suitable provider.
- **Hostname/Domain**: the Domain name that you can access router.



IP address source [IPv4]: Network

Network [IPv4]: ifmobile

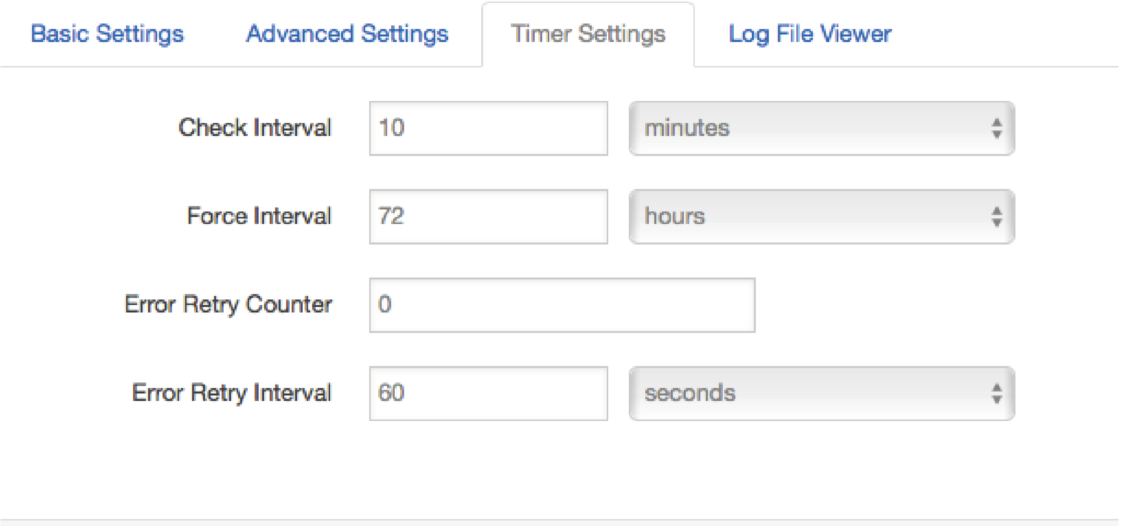
DNS-Server: mydns.lan

PROXY-Server: user:password@myproxy.lan:8080

Log to syslog: Notice

Log to file ☑

- **IP address source:** Defines the source to read systems IPv4-Address from, that will be send to the DDNS provider. The recommend option is network.
- **Network:** Defines the network to read systems IPv4-Address from.
- **DNS-server:** OPTIONAL: Use non-default DNS-Server to detect 'Registered IP'. IP address and domain name is required.
- **Log to syslog:** Writes log messages to syslog. Critical Errors will always be written to syslog.
- **Log to file:** Writes detailed messages to log file. File will be truncated automatically.



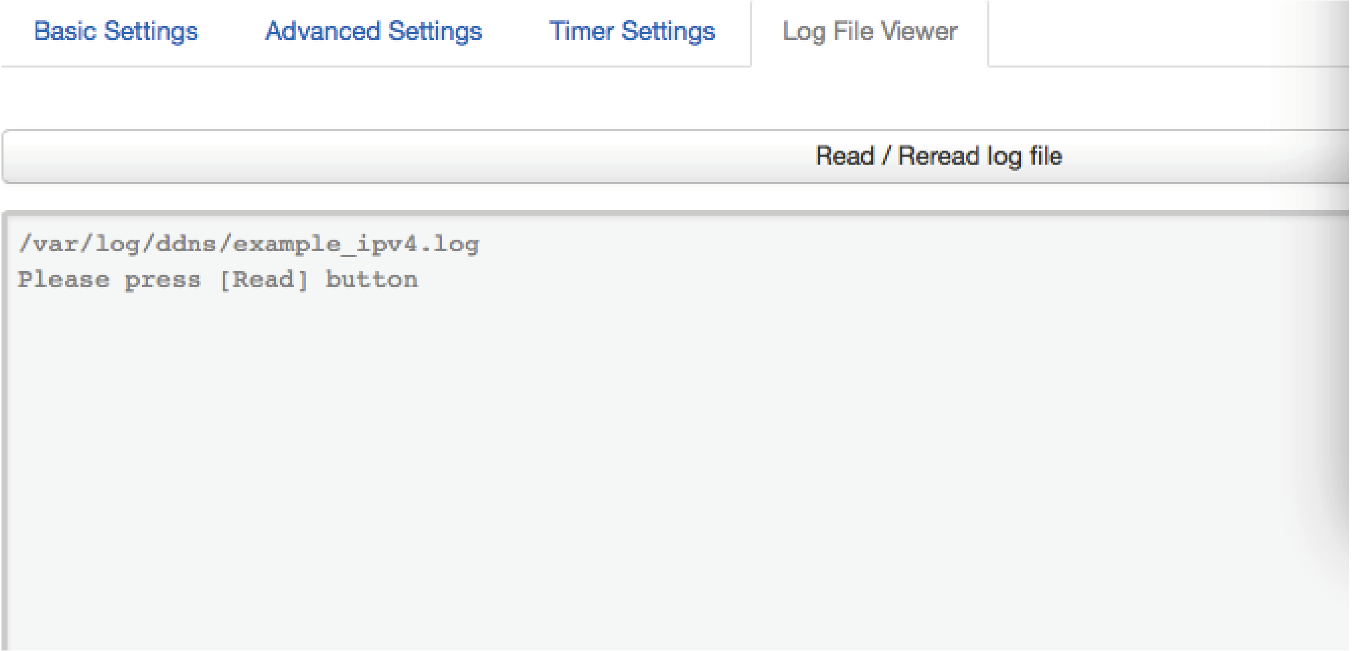
Check Interval: 10 minutes

Force Interval: 72 hours

Error Retry Counter: 0

Error Retry Interval: 60 seconds

- **Check Interval:** the minimum check interval is 1 minute=60seconds.
- **Force interval:** the minimum check interval is 1 minute=60seconds.
- **Error Retry Counter:** On Error the script will stop execution after given number of retries. The default setting of '0' will retry infinite.

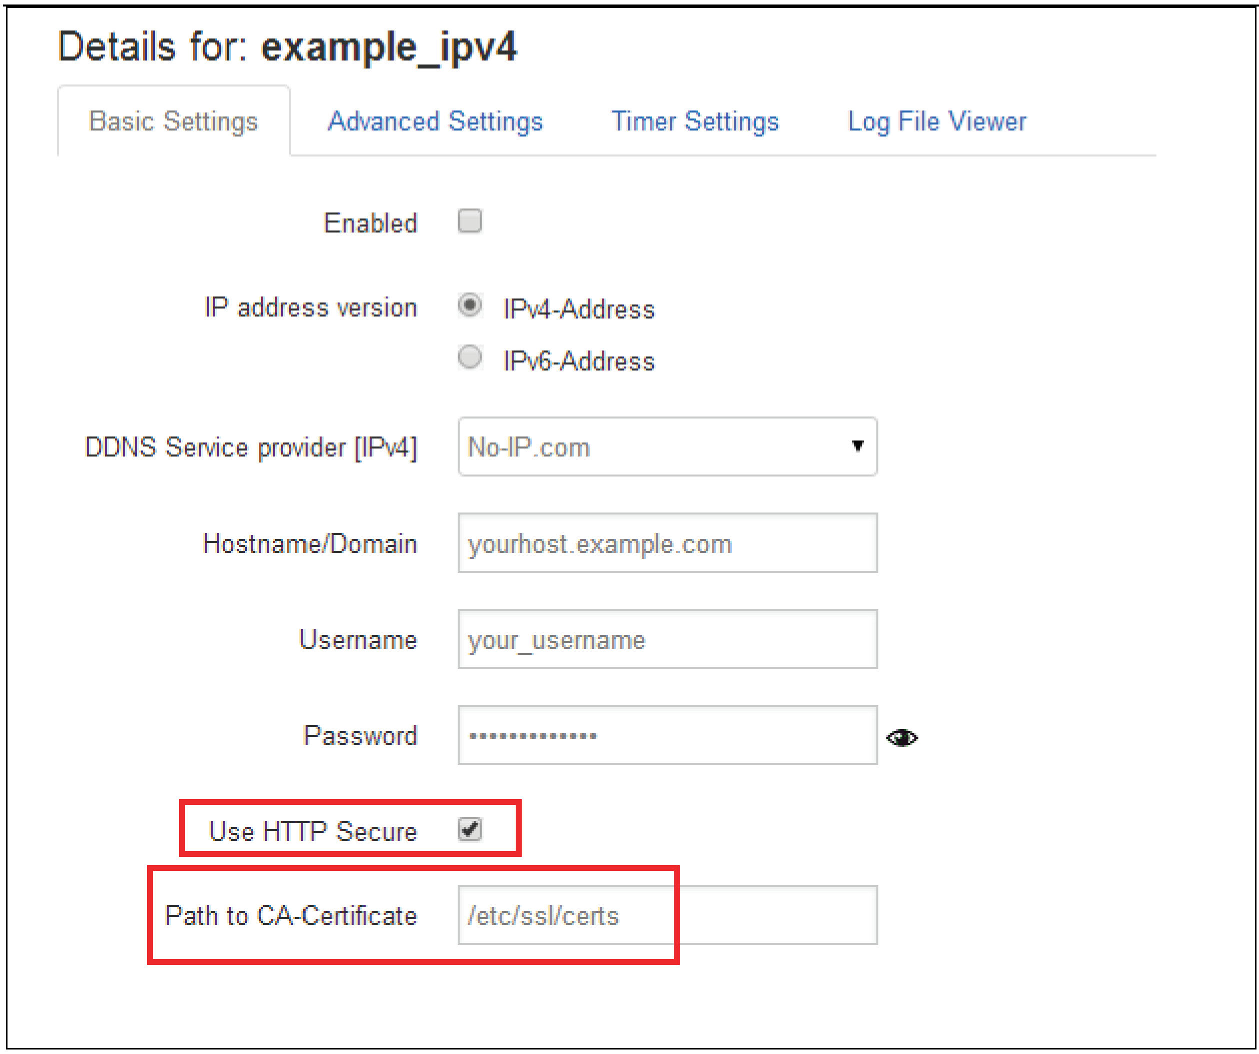


```
/var/log/ddns/example_ipv4.log
Please press [Read] button
```

Read the log file of DDNS.

Notes:

If use DDNS server no-ip.com, please check the " Use HTTP Secure" and put "8.8.8.8" for the DNS-Server referring to following picture.



Details for: example_ipv4

Enabled ☐

IP address version ● IPv4-Address ○ IPv6-Address

DDNS Service provider [IPv4] No-IP.com ▾

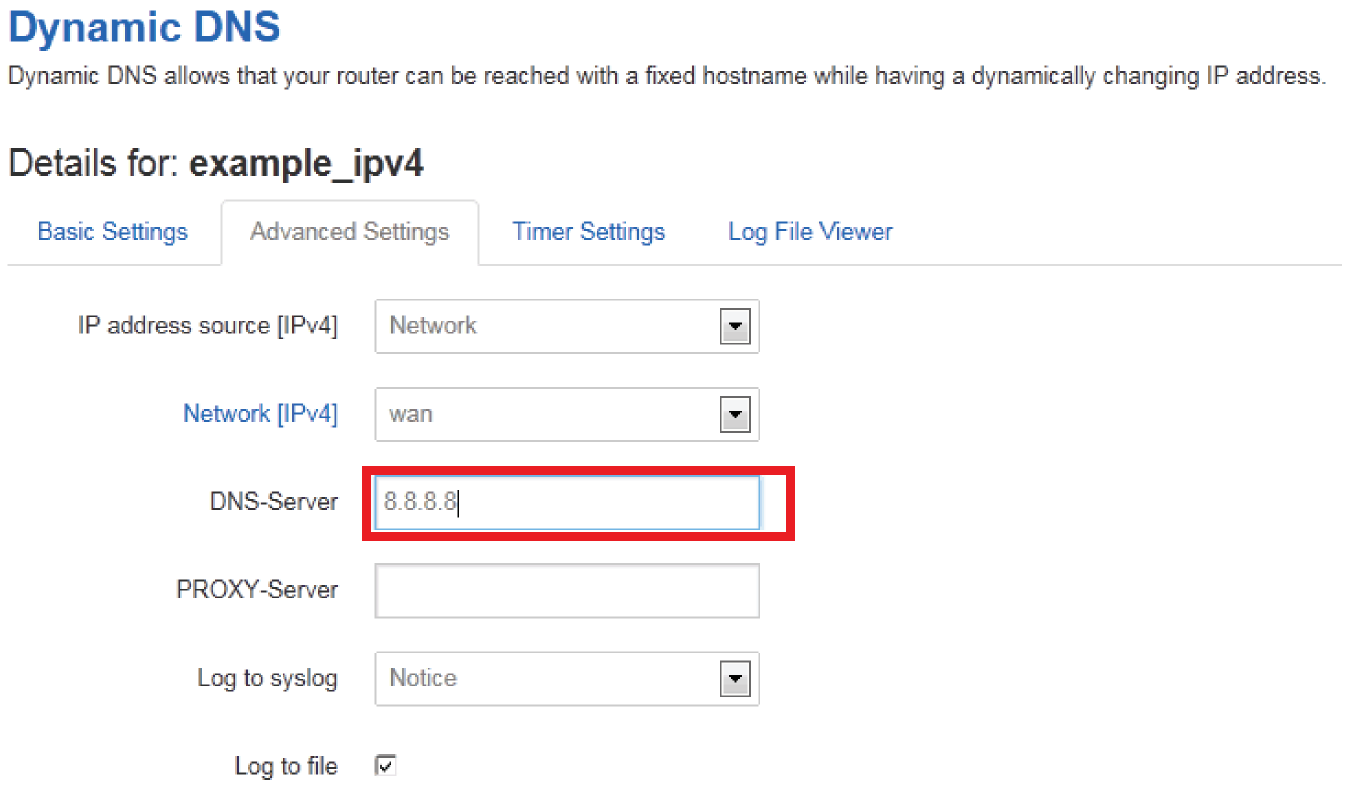
Hostname/Domain yourhost.example.com

Username your_username

Password ••••••••••••••

Use HTTP Secure ☑

Path to CA-Certificate /etc/ssl/certs



Dynamic DNS

Dynamic DNS allows that your router can be reached with a fixed hostname while having a dynamically changing IP address.

Details for: **example_ipv4**

IP address source [IPv4]: Network

Network [IPv4]: wan

DNS-Server: 8.8.8.8

Log to syslog: Notice

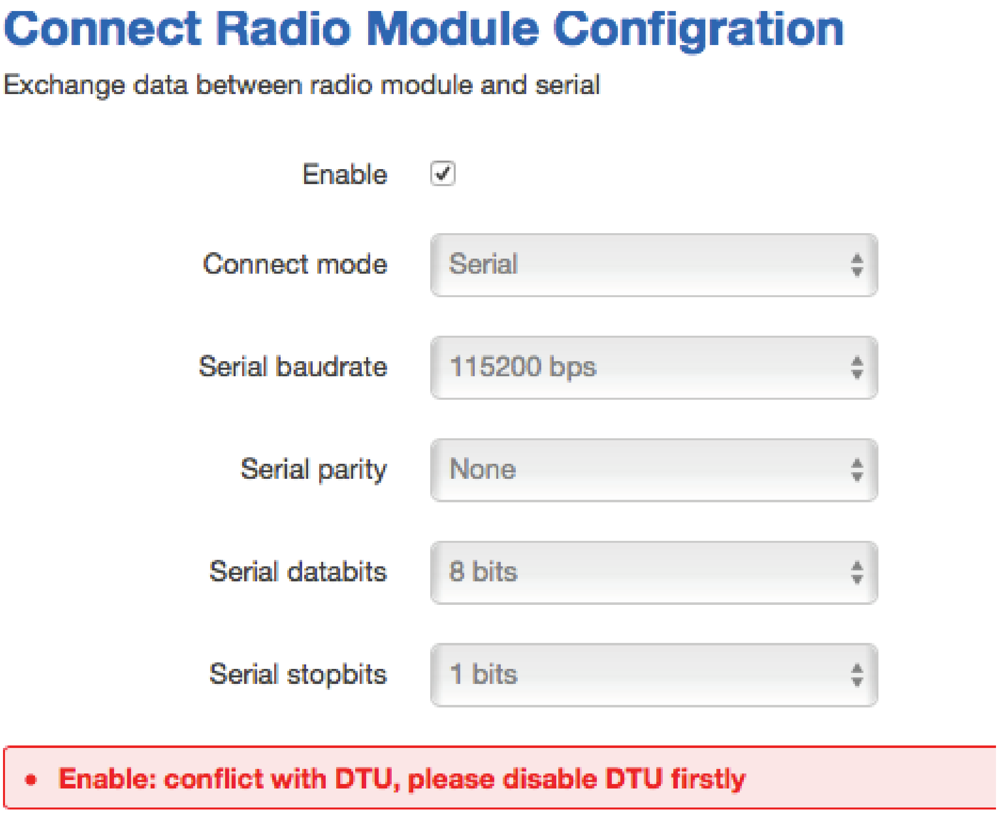
Log to file: ☑

3.5.10 Connect Radio Module

Connect Radio Module feature is used for exchanging data between Radio module and serial.

⚠ **Notes:**

This feature is conflict with DTU and "GPS sent to serial". Please make sure the other two features are disabled before enable Connect Radio Module. Otherwise this error will occur.



Connect Radio Module Configration

Exchange data between radio module and serial

Enable ☑

Connect mode: Serial

Serial baudrate: 115200 bps

Serial parity: None

Serial databits: 8 bits

Serial stopbits: 1 bits

- Enable: conflict with DTU, please disable DTU firstly

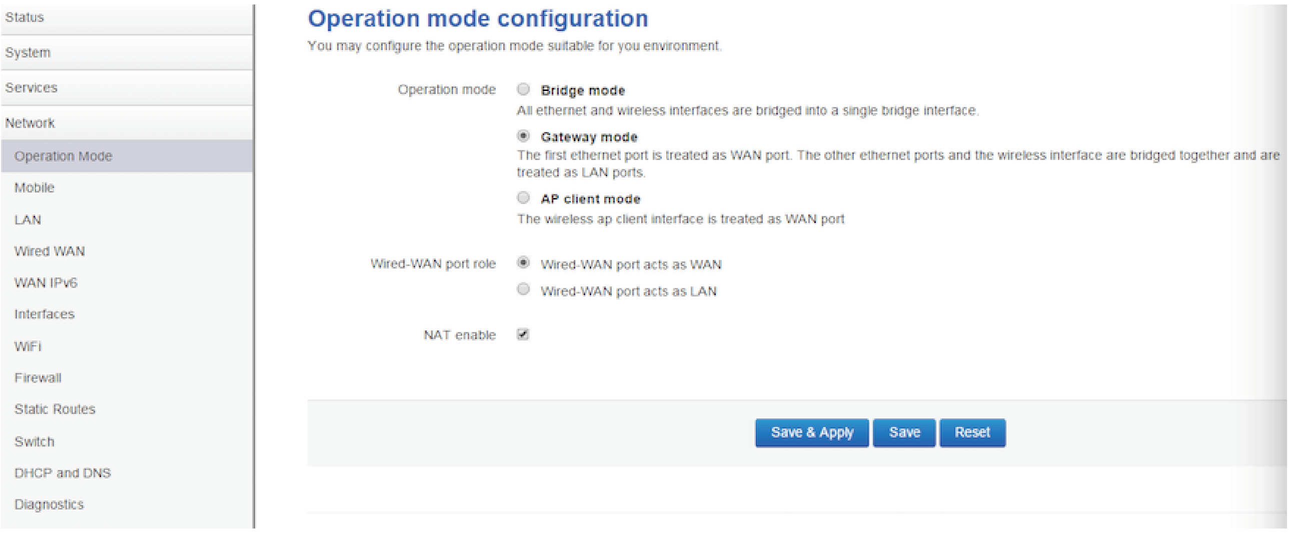
- **Connect Mode:** Serial only

Modem to Serial Settings

- **serial baudrate:** support 9600/19200/38400/57600/115200bps
- **serial parity:** support none/odd/even
- **serial databits:** support 7 bits and 8 bits
- **serial stopbit:** support 1 bits and 2 bits
- **Serial Flow Control:** support none/hardware/software

3.6 Network Configuration

3.6.1 Operation Mode



Operation mode configuration

You may configure the operation mode suitable for you environment.

Operation mode ○ Bridge mode
All ethernet and wireless interfaces are bridged into a single bridge interface.
● Gateway mode
The first ethernet port is treated as WAN port. The other ethernet ports and the wireless interface are bridged together and are treated as LAN ports.
○ AP client mode
The wireless ap client interface is treated as WAN port

Wired-WAN port role ● Wired-WAN port acts as WAN
○ Wired-WAN port acts as LAN

NAT enable ☑

- **Operation mode**
  - **Bridge:** All Ethernet and wireless interfaces are bridged into a single bridge interface.
  - **Gateway:** The first Ethernet port is treated as WAN port. The other Ethernet ports and the wireless interface are bridged together and are treated as LAN ports.
  - **AP Client:** The wireless apcli interface is treated as WAN port and the wireless AP interface and the Ethernet ports are LAN ports.
- **NAT Enabled**

  Network Address Translation. Default is *Enabling*
- **Ethernet wan port role:**

  Wired-WAN port acts as WAN

  The Ethernet wan port is used as for WAN. Default is *Checked*

  Wired-WAN port acts as LAN

  The Ethernet wan port is used as for lan port to get 2 LAN Ethernet ports. If is WAN RJ45 Ethernet port is used for WAN, please do not check this feature.

Normally and default we select “Gateway mode”, and keep all other parameters as default.

3.6.1.1 Gets Five LAN Ethernet Port for H700

Check the " Wired-WAN port acts as LAN ".

Notes:

1) If checked the " Wired-WAN port acts as LAN ", the H700 does not have WAN RJ45 port.

2) Please do not use any features for WAN RJ45 if check the " Wired-WAN port acts as LAN "

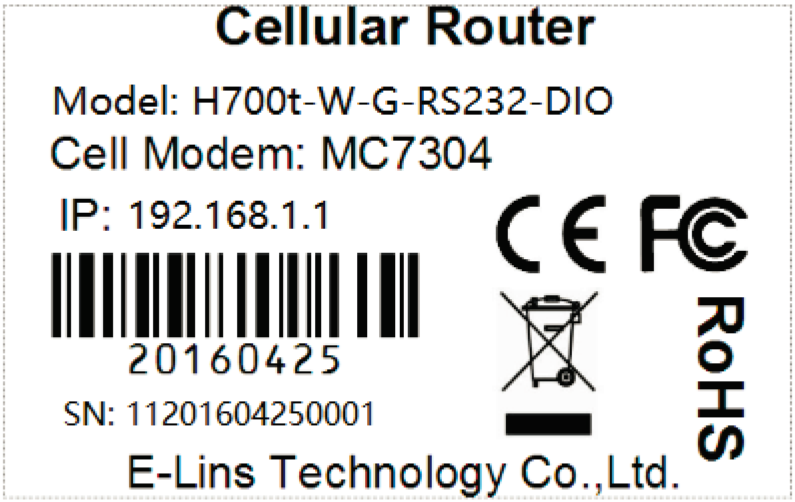
3.6.2 Mobile configuration

System supports different cell modems. Default, the router is with right Cell Modem name before shipment. If you replace with other different Cell Modem, if it is supported, the router will automatically detect the Cell Modem.

Notes:

the Cell Modem Type was marked on the back of the router.

For example, it shows the following picture. H700 is the router series name, H700t-W-G-RS232-DIO is the part number name. And the MC7304 Cell Modem is the Cell Modem name.



Cellular Router

Model: H700t-W-G-RS232-DIO

Cell Modem: MC7304

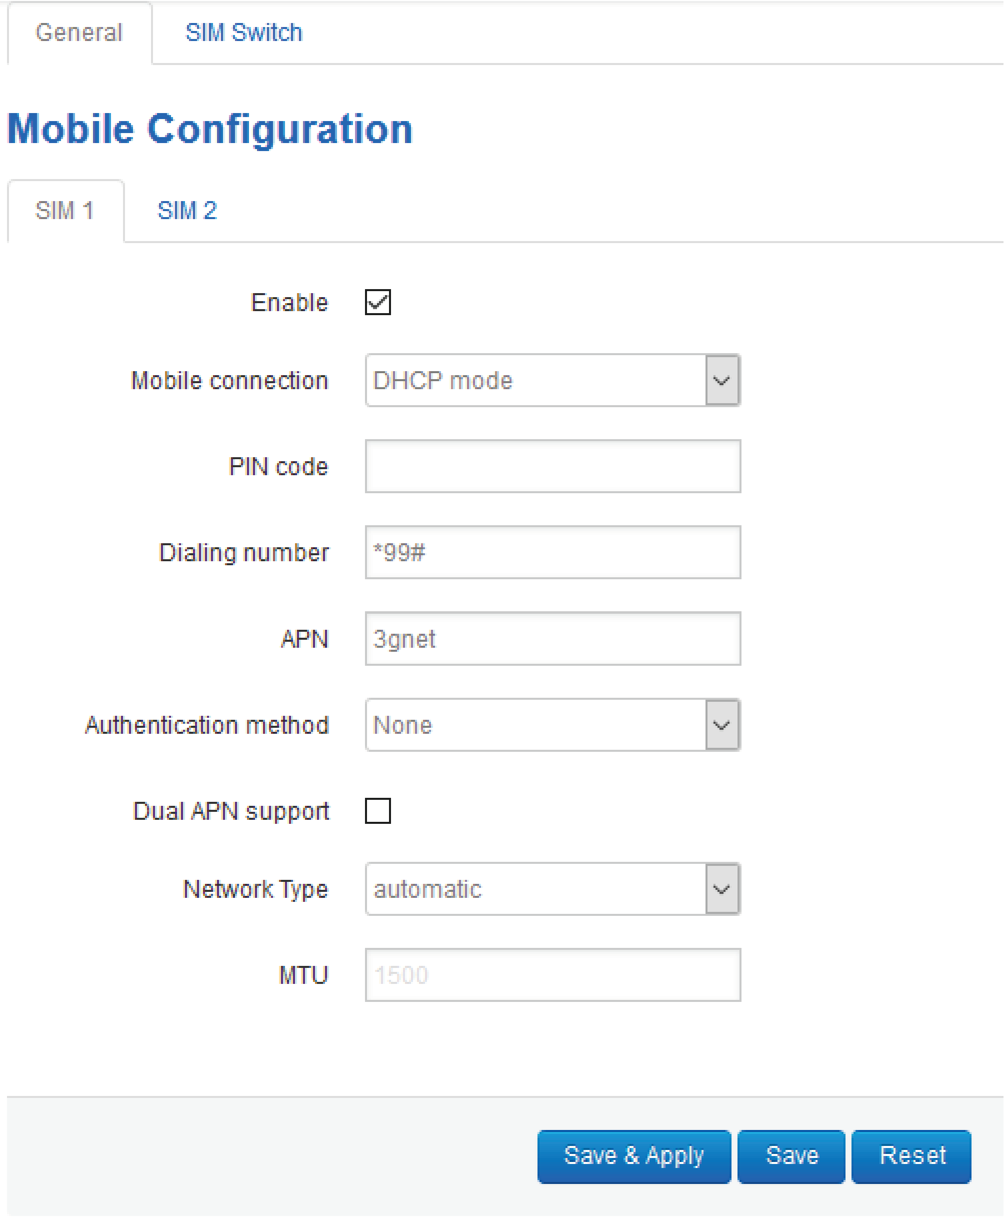
IP: 192.168.1.1

20160425

SN: 11201604250001

E-Lins Technology Co.,Ltd.

Configure the parameters for SIM1 and SIM2.



Mobile Configuration

Enable	☑

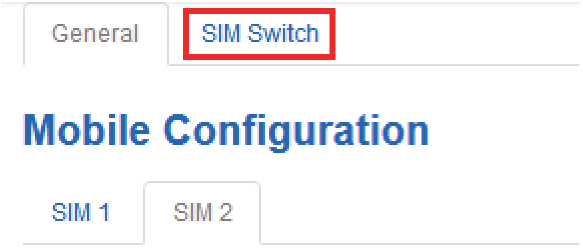
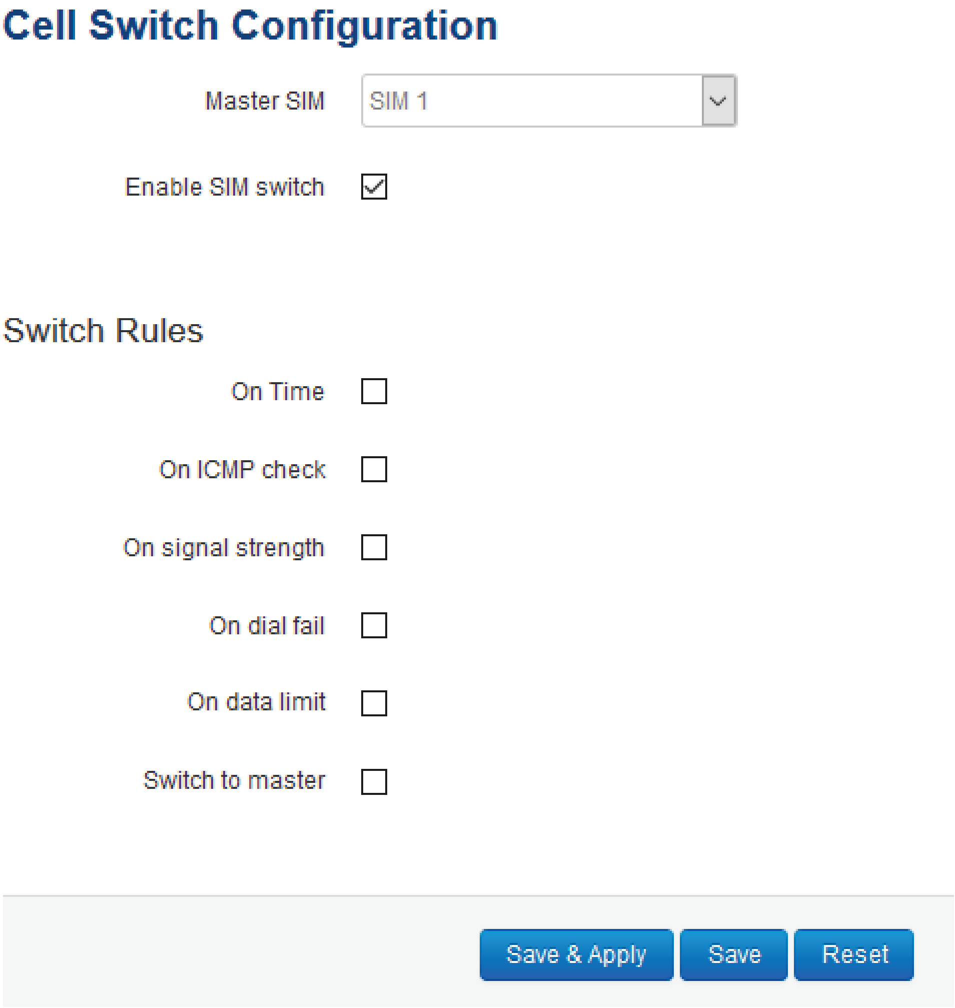
Click Save button for next step;

Click SIM Switch to configure the SIM working mode.





Cell Switch Configuration

Master SIM: SIM 1

Enable SIM switch ☑

Switch Rules

On Time □

On ICMP check □

On signal strength □

On dial fail □

On data limit □

Switch to master □

Item	Description	
Master SIM	Choose the SIM1 or SIM2 for master SIM, the other SIM will automatically be backup SIM.	
Enable SIM switch	Check this to enable the SIM switch feature. If not check this, the router works with single SIM.	
Switch Rules	On Time	Check this, the two SIMs switch with trigger of time schedule.
	On ICMP check	Check this, the two SIMs switch with trigger of cell alive. The data traffic goes via Master SIM, once Master SIM is failed, switch to backup SIM. Once backup SIM is failed, the data traffic switches to Master SIM.
	On Signal strength	Set the signal ASU value from 1 to 30. For example, set value as 10, the data traffic will switch from Master SIM to backup SIM if master SIM signal value is less than 10.
	On dial fail	Master SIM and backup SIM switch with trigger of SIM dialing retries. For example, set value as 5, the data traffic will switch from Master SIM to backup SIM if master SIM dialing failure reaches 5.
	On data limit	Master SIM and backup SIM switch with trigger of SIM data limit.
	Switch to master	For example, check this feature and set the value as 3 minutes. With some issue, the data traffic goes via backup SIM. The router will check master SIM working status. If master SIM is working, data traffic will

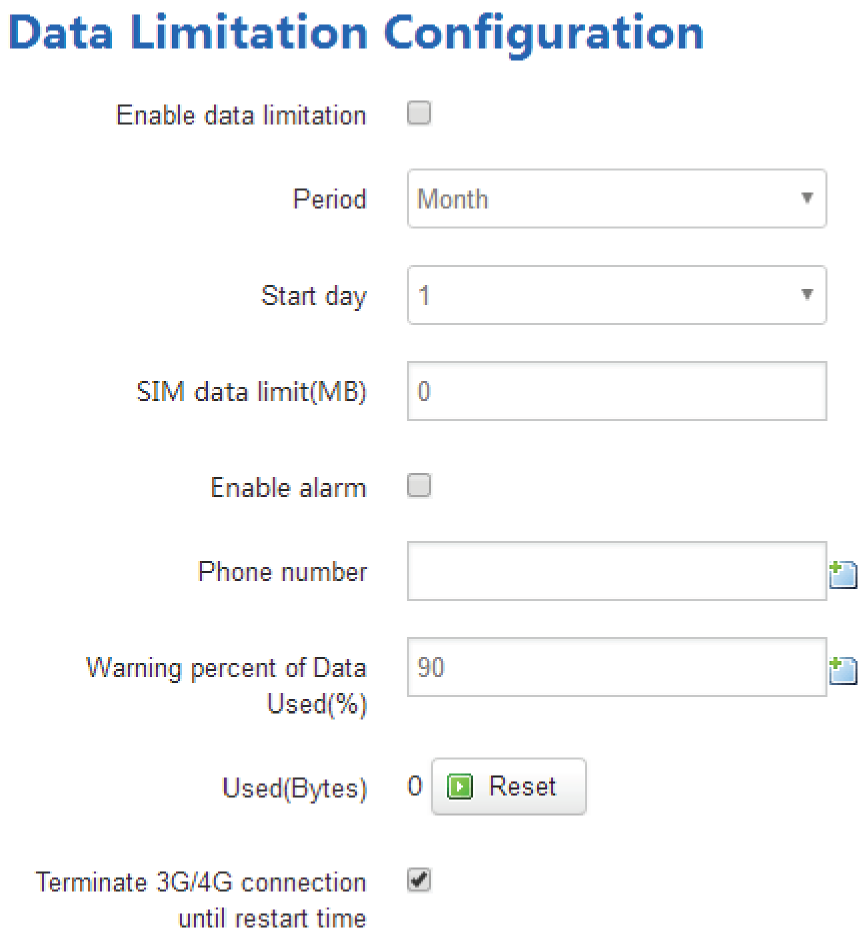
		switch to master SIM after 3 minutes.
Notes: some trigger rules can be selected and used at the same time to meet different applications.		

- **Enable:** Enable mobile network;
- **Mobile connection:** Select a suitable mode for mobile to connect, for the cell modem only supports 3G, the default mode is *pppd* mode, otherwise the default value is DHCP mode;
- **APN:** Fill in the related parameters. Get this parameter from the Sim Card Provider or Carrier;
- **PIN number:** If necessary, fill in the related parameters. Most of sim card has no PIN code, and then keep it as blank;
- **Dialing number:** Fill in the related parameters. Get this parameter from the Sim Card Provider or Carrier;
- **Authentication method:** Three options (None, PAP, CHAP). Please confirm your carrier provide the types of authentication. Normally select *None*. If not work, try to use *PAP* or *CHAP*;
- **Username:** Fill in the related parameters. Get this parameter from the Sim Card Provider or Carrier.
  Notes: If your SIM card has no user name, please input out default value, otherwise the router may not dialup. Note: if the authentication method is None, this parameter will not be displayed.
- **Password:** Fill in the related parameters. Get this parameter from the Sim Card Provider or Carrier.

> ⚠**Notes**: If your SIM card has no user name, please input out default value, otherwise the router may not dialup.
>
> ⚠**Note**: if the authentication method is None, this parameter will not be displayed.

- **Network Type:** Select the type. Different Cell Modem supports different types. The default value is *Automatic*.
- **MTU:** Maximum Transmission Unit. It is the max size of packet transmitted on network. The default value is 1500. Please configure it to optimize your own network.
- **Online Mode**
  Keep Alive: means always online. The router will keep online whatever there is data for transmission or not.
  On Demand: The router will dialup when there is data for transmission.
  Idle time (minutes): fill in the time. For example, fill in 5, the router will offline after 5 minutes if there is no data for transmission.
  Scheduled: router dialup or offline with schedule. One group is supported.

3.6.3 Cell mobile data limitation



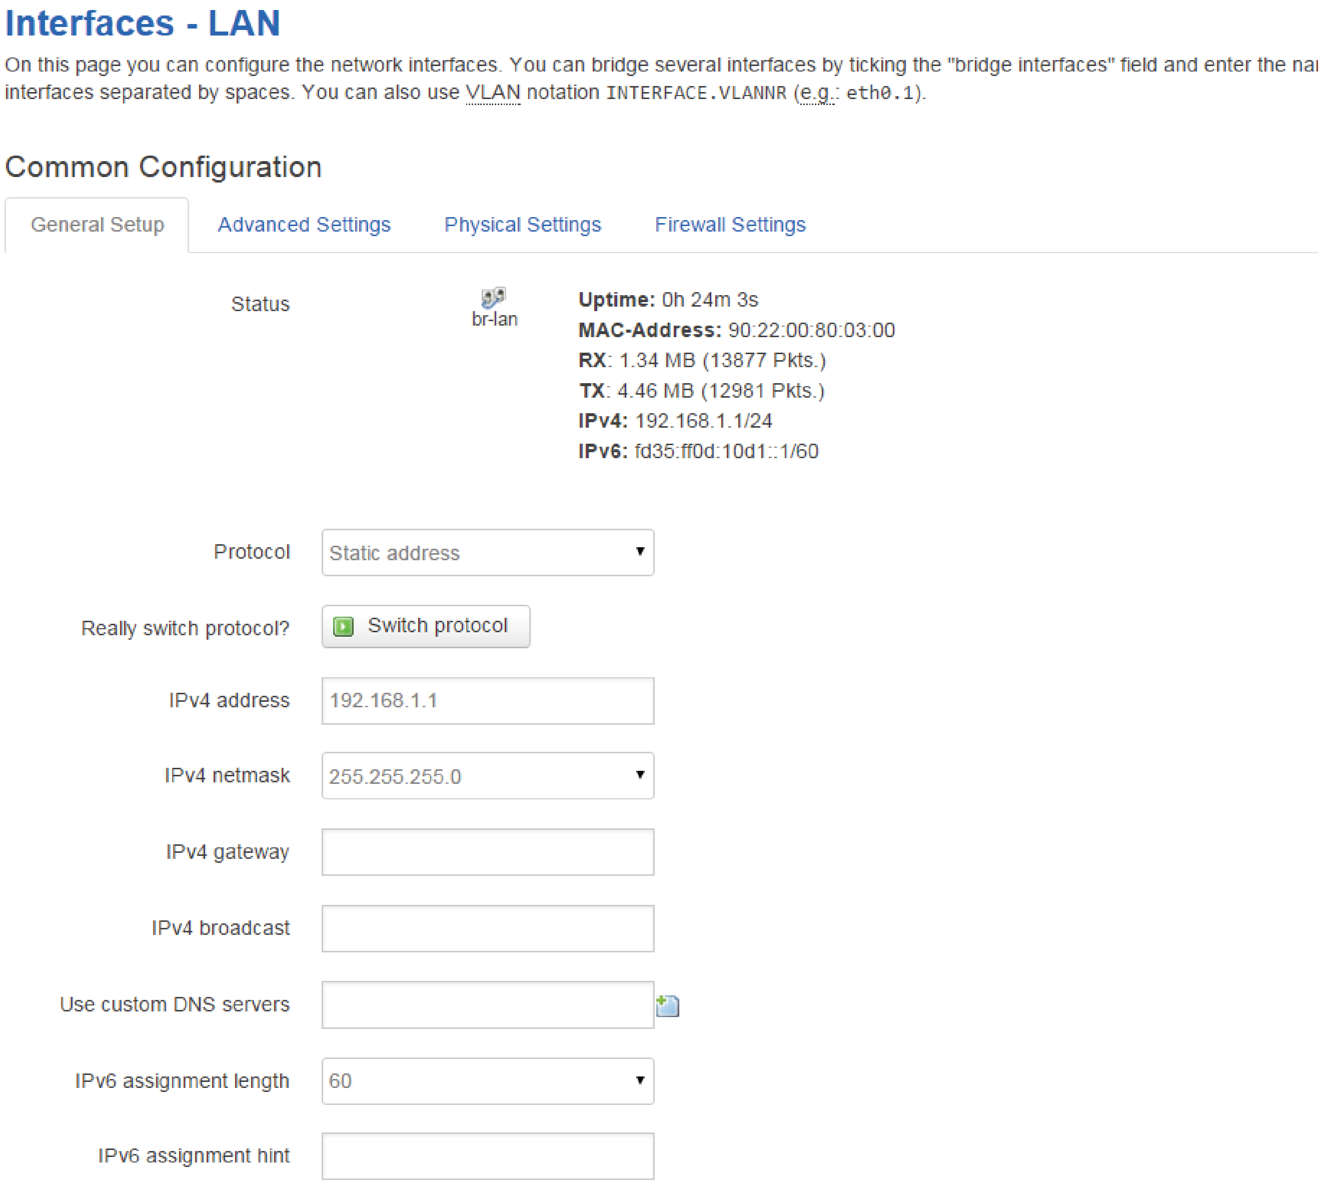
Data Limitation Configuration

Enable data limitation	□
Period	Month ▾
Start day	1 ▾
SIM data limit(MB)	0
Enable alarm	□
Phone number	
Warning percent of Data Used(%)	90
Used(Bytes)	0 Reset
Terminate 3G/4G connection until restart time	☑

- **Enable data limitation**:
- **Period**: support period are Month, Week and Day.
- **Start day**: the beginning day of period.
- **SIM data limit(MB)**: the maximum data can be used during this period. If it exceeds， router will disable cell mobile network during this period.
- **Enable alarm**: enable data limitation alarm.
- **Phone number**: the phone number receives data limitation alarm SMS.
- **Warning percent of data used**: if the used data arrives this setting, a data limitation alarm SMS will be sent.
- **Used(MB):** the data has been consumed during this period.
- **Reset:** press this button to clear all used .

- **Terminate 3G/4G connection until restart time:** if the max data exceed, set cell interface to down.

3.6.4 LAN settings



Interfaces - LAN

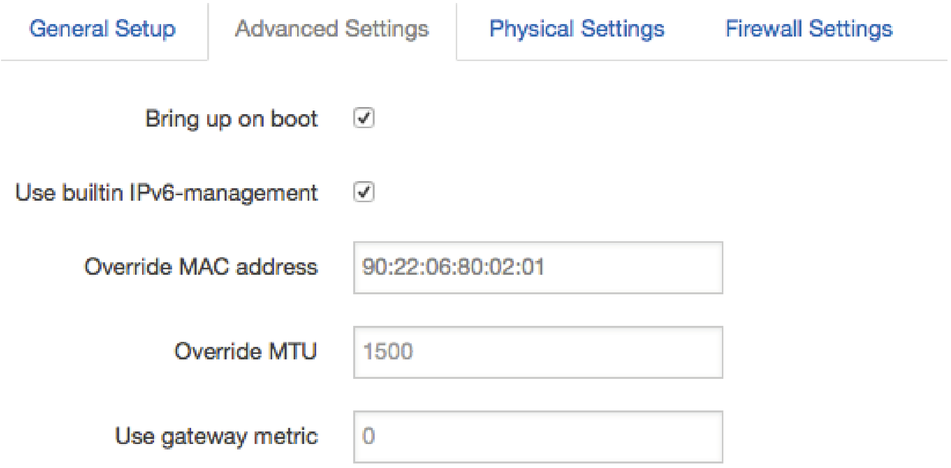
On this page you can configure the network interfaces. You can bridge several interfaces by ticking the "bridge interfaces" field and enter the nai interfaces separated by spaces. You can also use VLAN notation `INTERFACE.VLANNR` (e.g.: `eth0.1`).

Common Configuration

Status: br-lan
Uptime: 0h 24m 3s
MAC-Address: 90:22:00:80:03:00
RX: 1.34 MB (13877 Pkts.)
TX: 4.46 MB (12981 Pkts.)
IPv4: 192.168.1.1/24
IPv6: fd35:ff0d:10d1::1/60

Protocol	Static address
Really switch protocol?	Switch protocol
IPv4 address	192.168.1.1
IPv4 netmask	255.255.255.0
IPv4 gateway	
IPv4 broadcast	
Use custom DNS servers	
IPv6 assignment length	60
IPv6 assignment hint	

- **Protocol**: only static address is supported for LAN
- **Use custom DNS servers**: multiple DNS server supported.
- **IPv6 assignment length**: Assign a part of given length of every public IPv6-prefix to LAN interface
- **IPv6 assignment hint**: Assign prefix parts using this hexadecimal subprefix ID for LAN interface.



General Setup | Advanced Settings | Physical Settings | Firewall Settings

Bring up on boot ☑

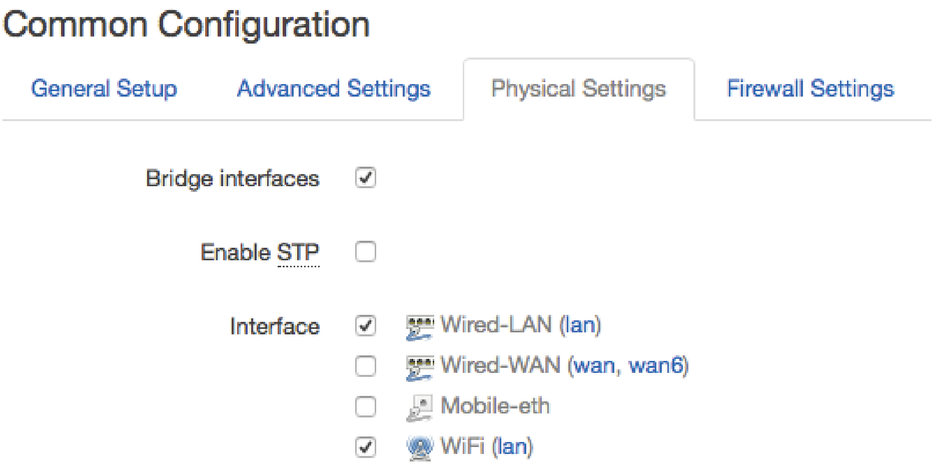
Use builtin IPv6-management ☑

Override MAC address 90:22:06:80:02:01

Override MTU 1500

Use gateway metric 0

- **Bring up on boot**: if checked, LAN interface will be set to up when system bootup. If unchecked, LAN interface will be down. Don’t set it to unchecked if don’t have special purpose.
- **Use builtin IPv6-management**: the default is checked. If IPv6 is not needed, it can be set to unchecked.
- **Override MAC address**: override LAN MAC address.
- **Override MTU**: Maximum Transmission Unit.
- **Use gateway metric**: the LAN subnet’s metric to gateway.



Common Configuration

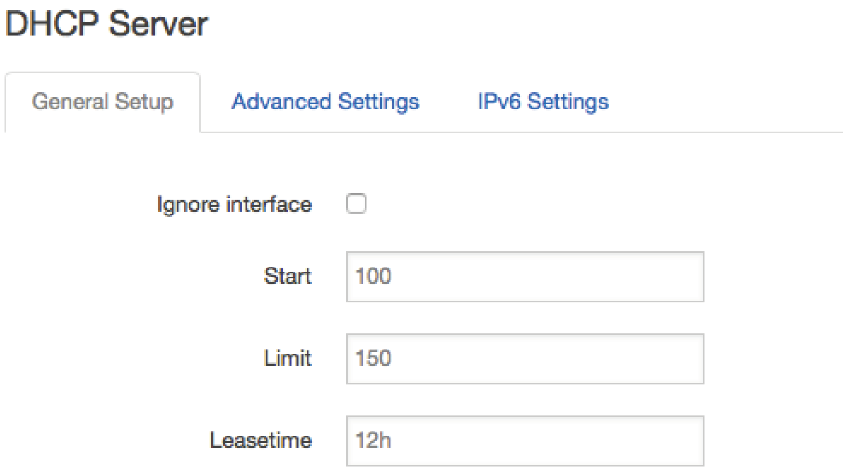
General Setup | Advanced Settings | Physical Settings | Firewall Settings

Bridge interfaces ☑

Enable STP □

Interface
☑ Wired-LAN (lan)
□ Wired-WAN (wan, wan6)
□ Mobile-eth
☑ WiFi (lan)

- **Bridge interfaces**: LAN bridges wired-LAN and WiFi in a same LAN subnet.
- **Enable STP**: enable Spanning Tree Protocol on LAN. The default value is unchecked.



DHCP Server

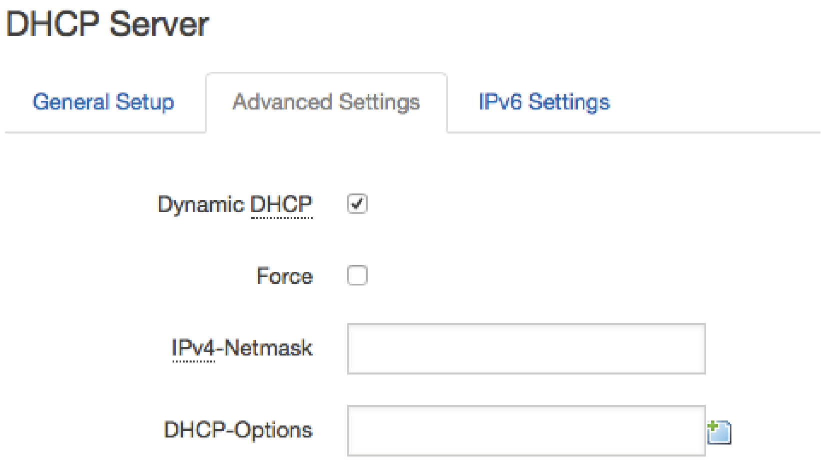
Ignore interface ☐

Start: 100

Limit: 150

Leasetime: 12h

- **Ignore interface**: if it is unchecked, Disable DHCP on LAN.
- **Start**: Lowest leased address as offset from the network address.
- **Limit**: Maximum number of leased addresses.
- **Leasetime**: Expiry time of leased addresses, minimum is 2 minutes(2m). 12H means 12 hours.



DHCP Server

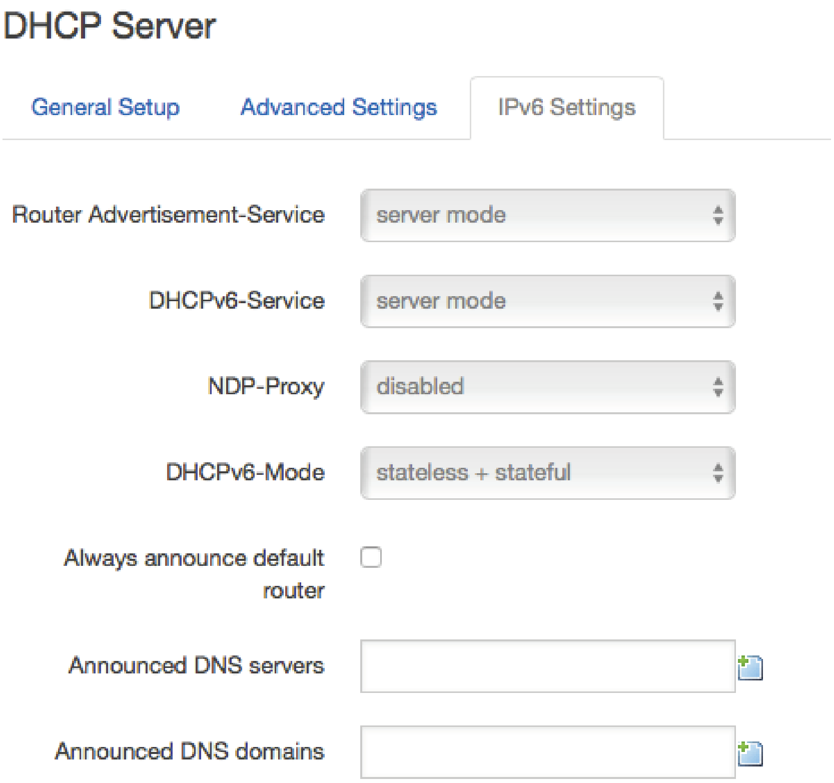
Dynamic DHCP ☑

Force ☐

IPv4-Netmask:

DHCP-Options:

- **Dynamic DHCP**: Dynamically allocate DHCP addresses for clients. If disabled, only clients having static leases will be served.
- **Force**: Force DHCP on this network even if another server is detected.
- **IPv4-Netmask**: Override the netmask sent to clients. Normally it is calculated from the subnet that is served.
- **DHCP-Options**: Define additional DHCP options, for example '6,192.168.2.1,192.168.2.2' which advertises different DNS servers to clients.



DHCP Server

General Setup | Advanced Settings | IPv6 Settings

Router Advertisement-Service: server mode

DHCPv6-Service: server mode

NDP-Proxy: disabled

DHCPv6-Mode: stateless + stateful

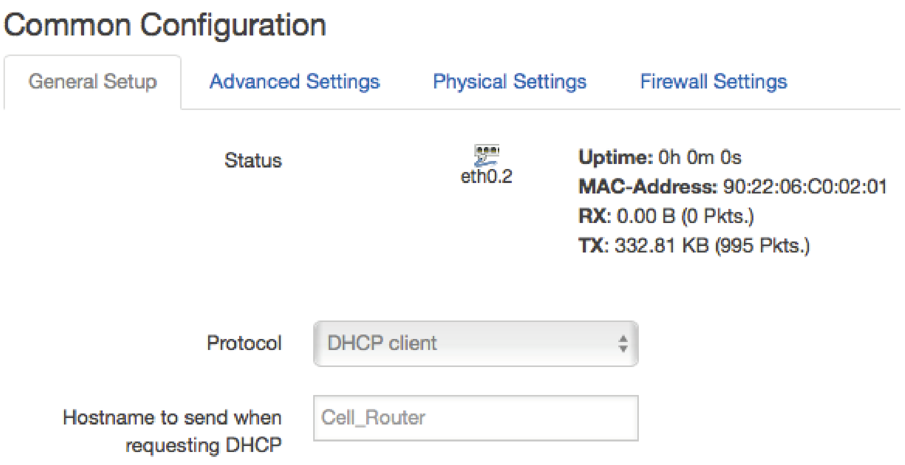
Always announce default router: □

Announced DNS servers:

Announced DNS domains:

- **Router Advertisement-Service**: four options: disabled, server mode, relay mode and hybrid mode.
- **DHCPv6-Service**: has same options with Router Advertisement-Service.
- **NDP-Proxy**: three options: disabled, relay mode and hybrid mode.
- **Always announce default router**: Announce as default router even if no public prefix is available.

3.6.5 wired-WAN



Common Configuration

General Setup | Advanced Settings | Physical Settings | Firewall Settings

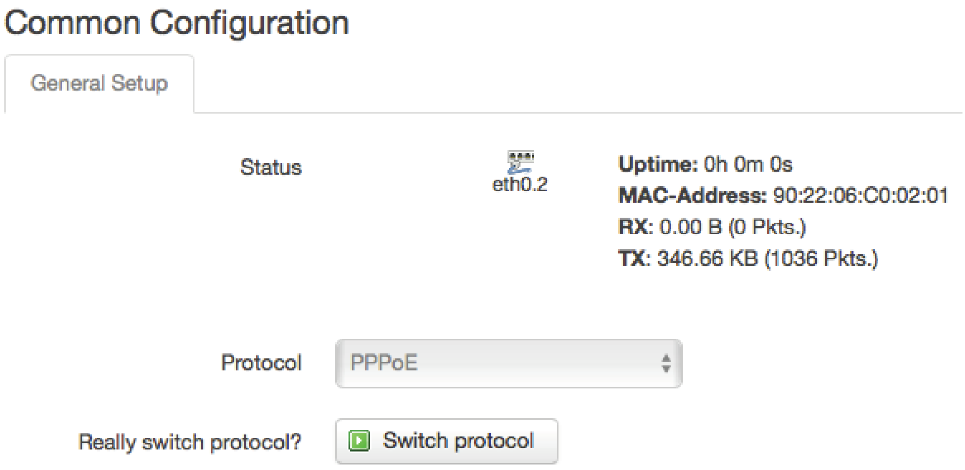
Status: eth0.2
Uptime: 0h 0m 0s
MAC-Address: 90:22:06:C0:02:01
RX: 0.00 B (0 Pkts.)
TX: 332.81 KB (995 Pkts.)

Protocol: DHCP client

Hostname to send when requesting DHCP: Cell_Router

- **Protocol**: the default protocol is DHCP client. If it should be changed to other protocol, such as

PPPoE, select protocol PPPoE, then click button “Switch protocol”.



Common Configuration

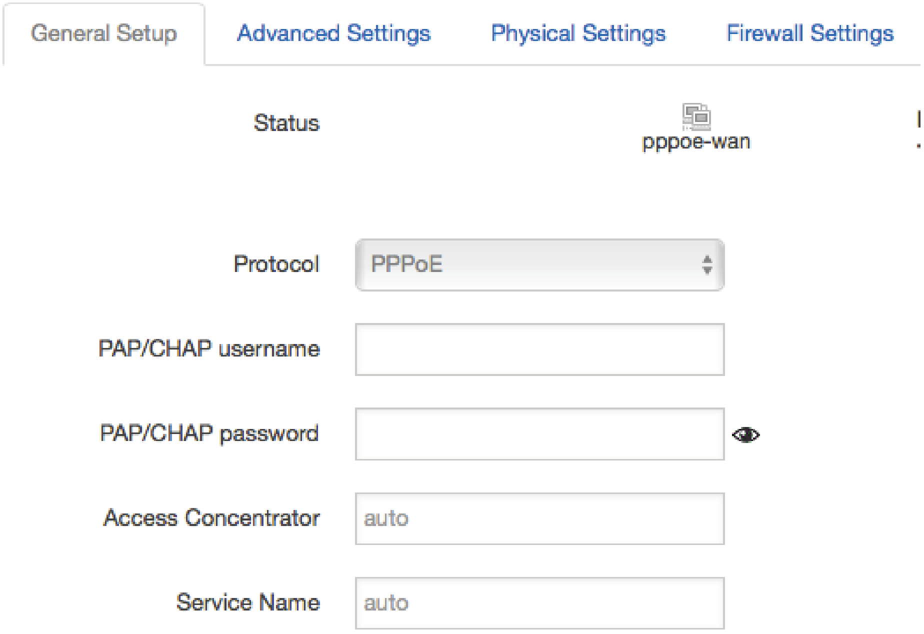
General Setup

Status: eth0.2 — **Uptime:** 0h 0m 0s, **MAC-Address:** 90:22:06:C0:02:01, **RX:** 0.00 B (0 Pkts.), **TX:** 346.66 KB (1036 Pkts.)

Protocol: PPPoE

Really switch protocol? Switch protocol

After click button “Switch protocol”, the below is shown:



Status: pppoe-wan

Protocol: PPPoE

PAP/CHAP username:

PAP/CHAP password:

Access Concentrator: auto

Service Name: auto

⚠**Note**: for different protocol, the Advanced Settings is different, please put mouse on title to get help information, the recommend web browser is Google Chrome.

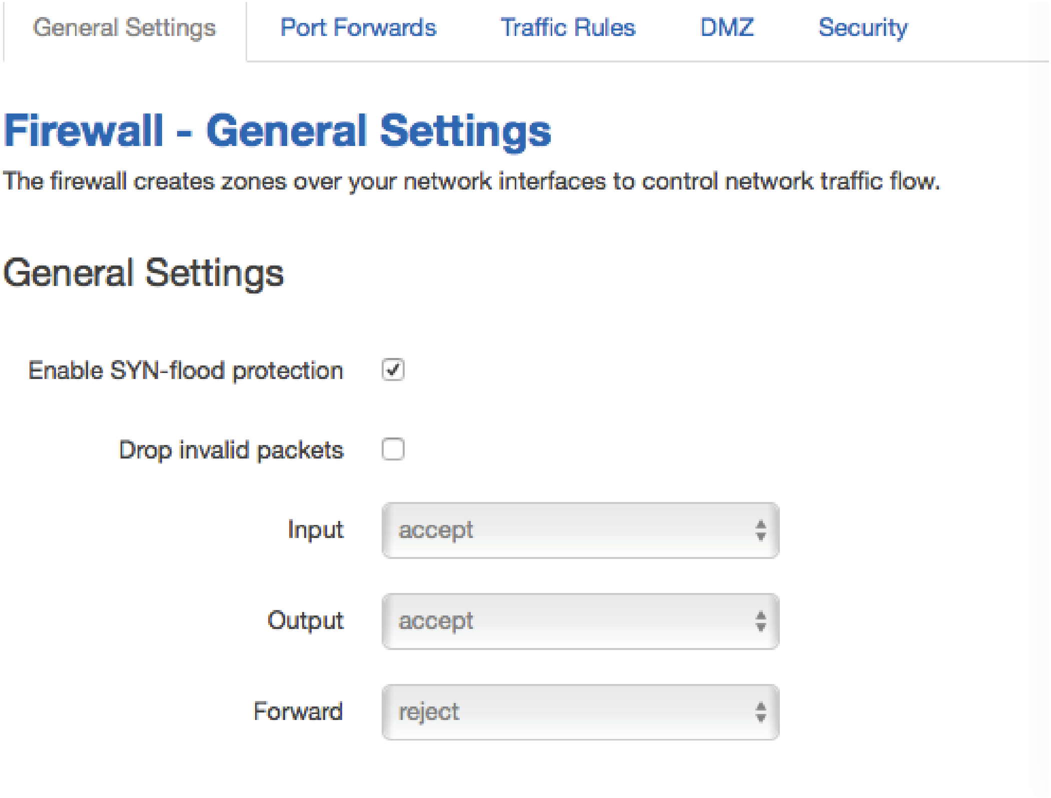
3.6.8 Firewall

3.6.8.1 General Settings



Firewall - General Settings

The firewall creates zones over your network interfaces to control network traffic flow.

General Settings

Enable SYN-flood protection ☑

Drop invalid packets □

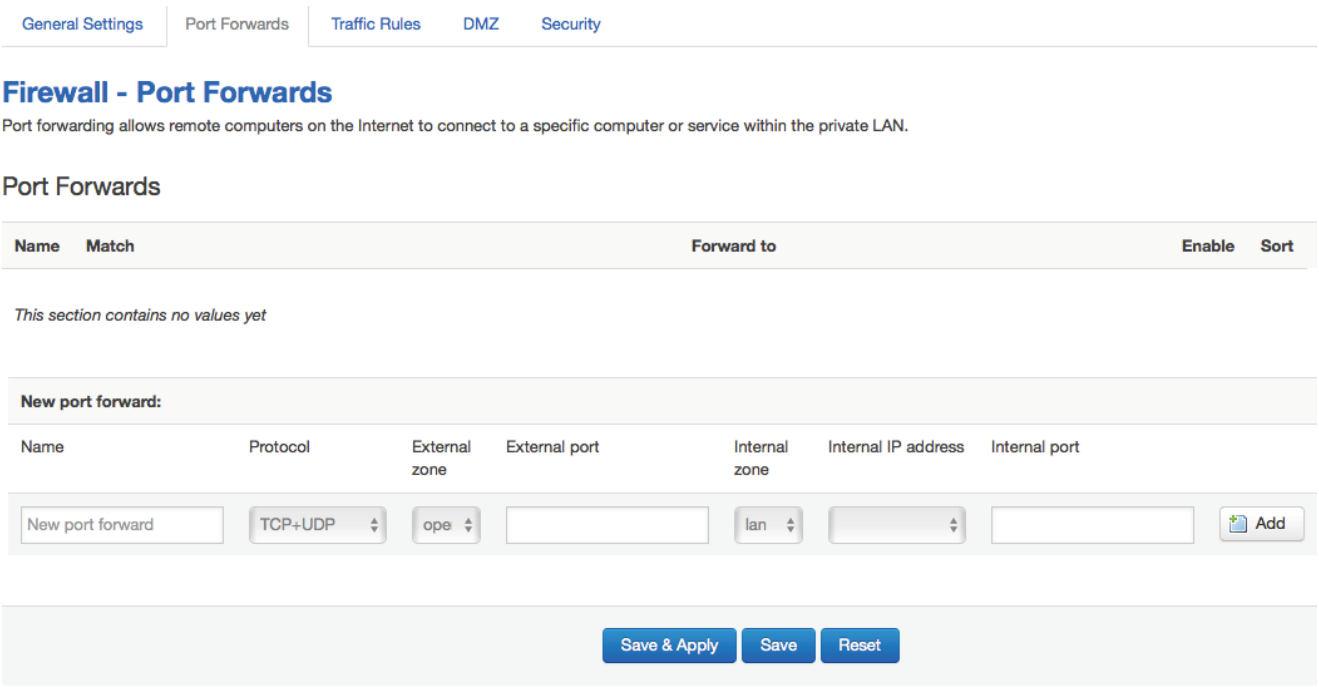
Input: accept

Output: accept

Forward: reject

3.6.8.2 Port Forwards

This page includes port forwards list and add new port forwards rule functionality.



Firewall - Port Forwards

Port forwarding allows remote computers on the Internet to connect to a specific computer or service within the private LAN.

Port Forwards

Name	Match	Forward to	Enable	Sort

This section contains no values yet

New port forward:

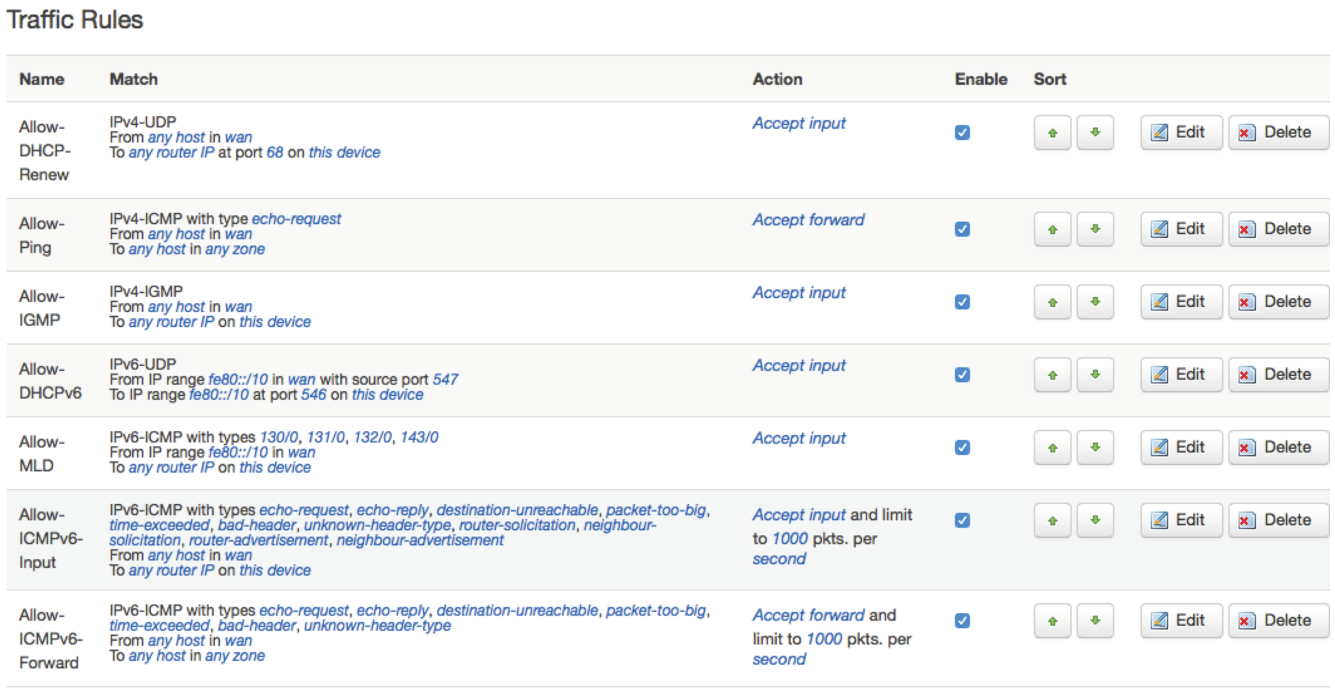
Name	Protocol	External zone	External port	Internal zone	Internal IP address	Internal port	
New port forward	TCP+UDP	ope		lan			Add

- **Name**: port forward instance name.
- **Protocol**: TCP+UDP, UDP and TCP can be chosen.
- **External zone**: the recommend option is wan.
- **External port**: match incoming traffic directed at the given destination port on this host.
- **Internal zone**: the recommend zone is *lan*.
- **Internal IP address**: redirect matched incoming traffic to the specific host.
- **Internal port**: redirect matched incoming traffic to the given port on the internal host.

3.6.8.3 traffic rules

Traffic rules define policies for packets traveling between different zones, for example to reject traffic between certain hosts or to open WAN ports on the router.
The traffic rules overview page content the follow functionalities.

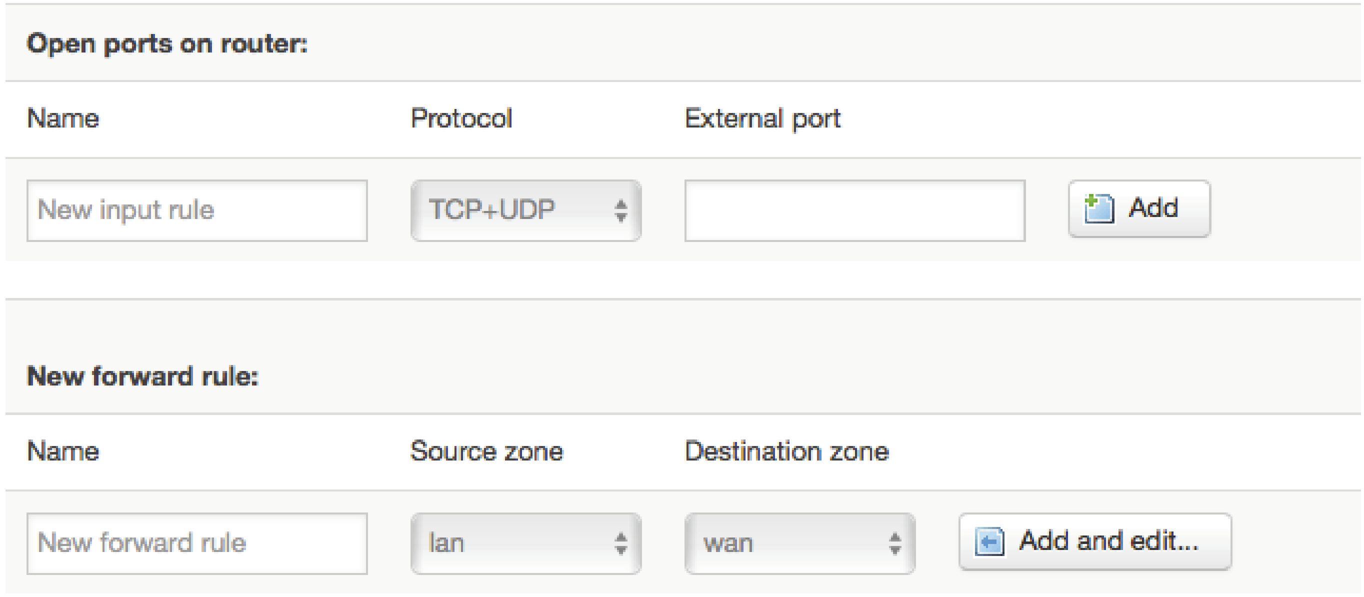
Traffic rules list:



Traffic Rules

Name	Match	Action	Enable	Sort		
Allow-DHCP-Renew	IPv4-UDP From *any host* in *wan* To *any router IP* at port *68* on *this device*	*Accept input*	☑	↑ ↓	Edit	Delete
Allow-Ping	IPv4-ICMP with type *echo-request* From *any host* in *wan* To *any host* in *any zone*	*Accept forward*	☑	↑ ↓	Edit	Delete
Allow-IGMP	IPv4-IGMP From *any host* in *wan* To *any router IP* on *this device*	*Accept input*	☑	↑ ↓	Edit	Delete
Allow-DHCPv6	IPv6-UDP From IP range *fe80::/10* in *wan* with source port *547* To IP range *fe80::/10* at port *546* on *this device*	*Accept input*	☑	↑ ↓	Edit	Delete
Allow-MLD	IPv6-ICMP with types *130/0*, *131/0*, *132/0*, *143/0* From IP range *fe80::/10* in *wan* To *any router IP* on *this device*	*Accept input*	☑	↑ ↓	Edit	Delete
Allow-ICMPv6-Input	IPv6-ICMP with types *echo-request*, *echo-reply*, *destination-unreachable*, *packet-too-big*, *time-exceeded*, *bad-header*, *unknown-header-type*, *router-solicitation*, *neighbour-solicitation*, *router-advertisement*, *neighbour-advertisement* From *any host* in *wan* To *any router IP* on *this device*	*Accept input* and limit to *1000* pkts. per *second*	☑	↑ ↓	Edit	Delete
Allow-ICMPv6-Forward	IPv6-ICMP with types *echo-request*, *echo-reply*, *destination-unreachable*, *packet-too-big*, *time-exceeded*, *bad-header*, *unknown-header-type* From *any host* in *wan* To *any host* in *any zone*	*Accept forward* and limit to *1000* pkts. per *second*	☑	↑ ↓	Edit	Delete

Open ports on router and create new forward rules:



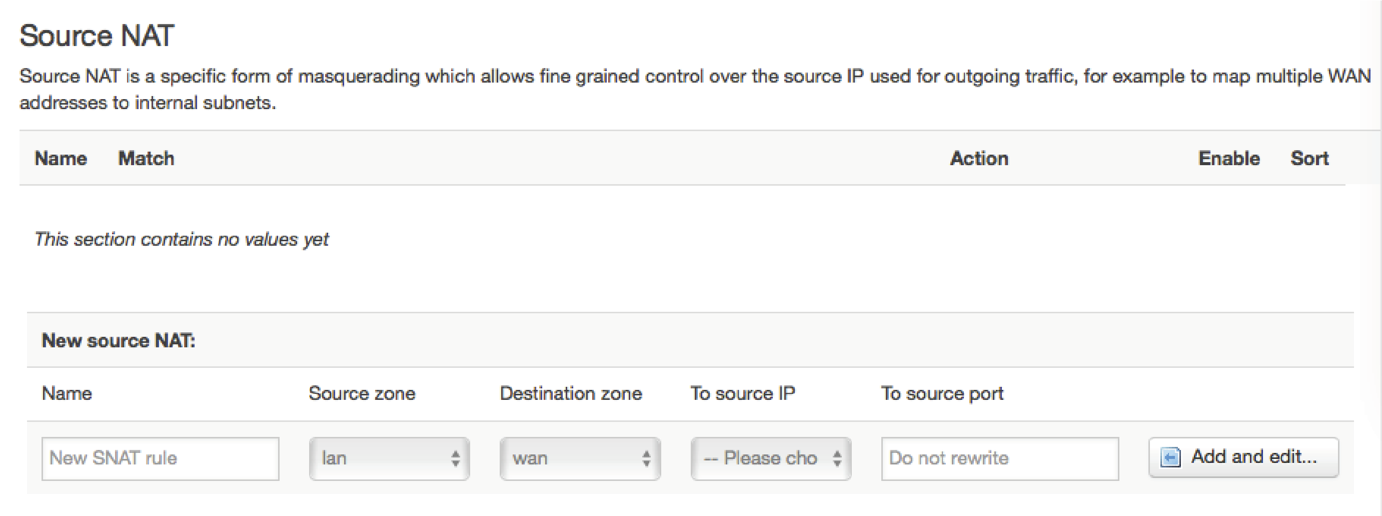
Open ports on router:

Name	Protocol	External port	
New input rule	TCP+UDP		Add

New forward rule:

Name	Source zone	Destination zone	
New forward rule	lan	wan	Add and edit...

Source NAT list and create source NAT rule:



Source NAT

Source NAT is a specific form of masquerading which allows fine grained control over the source IP used for outgoing traffic, for example to map multiple WAN addresses to internal subnets.

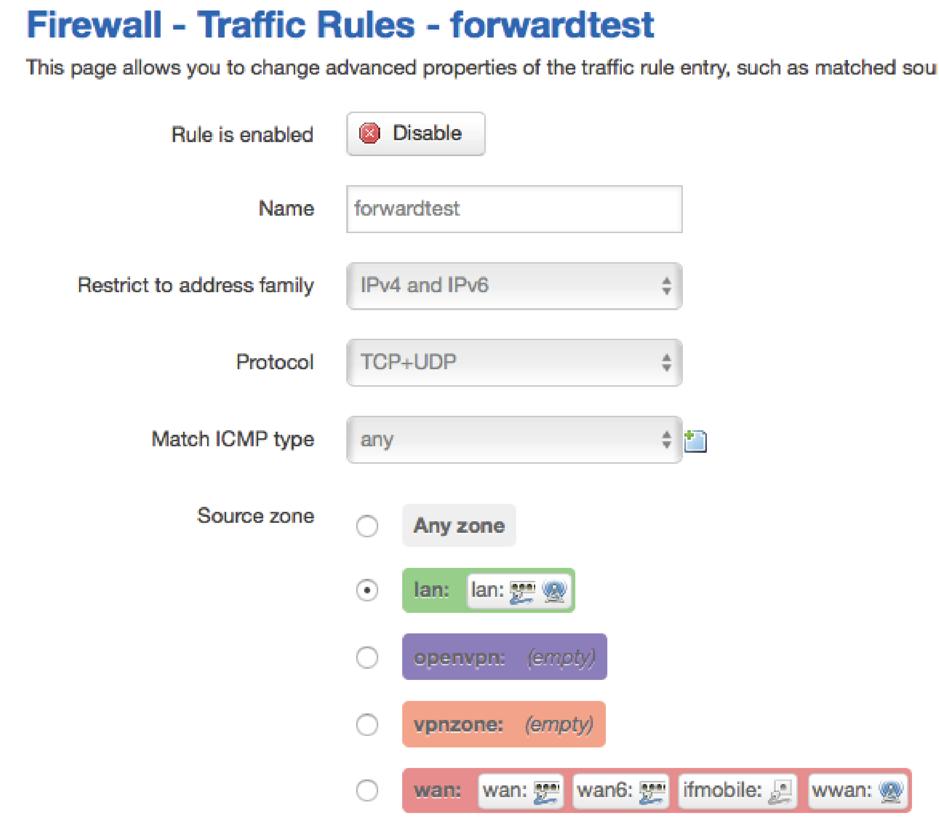
Name	Match	Action	Enable	Sort

This section contains no values yet

New source NAT:

Name	Source zone	Destination zone	To source IP	To source port	
New SNAT rule	lan	wan	-- Please cho	Do not rewrite	Add and edit...

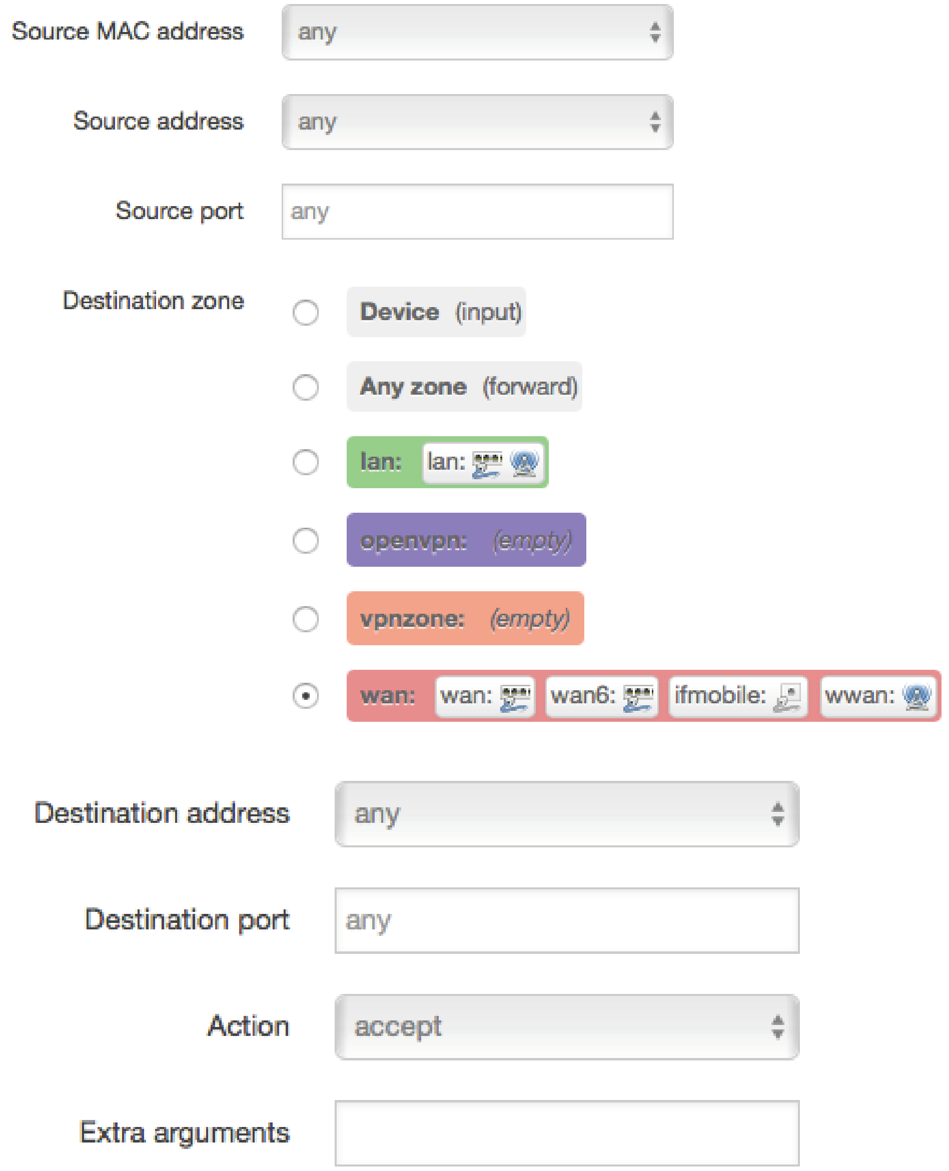
Traffic rule configuration page: This page allows you to change advanced properties of the traffic rule entry, such as matched source and destination hosts.



Firewall - Traffic Rules - forwardtest

This page allows you to change advanced properties of the traffic rule entry, such as matched sou

Rule is enabled	Disable
Name	forwardtest
Restrict to address family	IPv4 and IPv6
Protocol	TCP+UDP
Match ICMP type	any
Source zone	○ Any zone ● lan: lan: ○ openvpn: *(empty)* ○ vpnzone: *(empty)* ○ wan: wan: wan6: ifmobile: wwan:



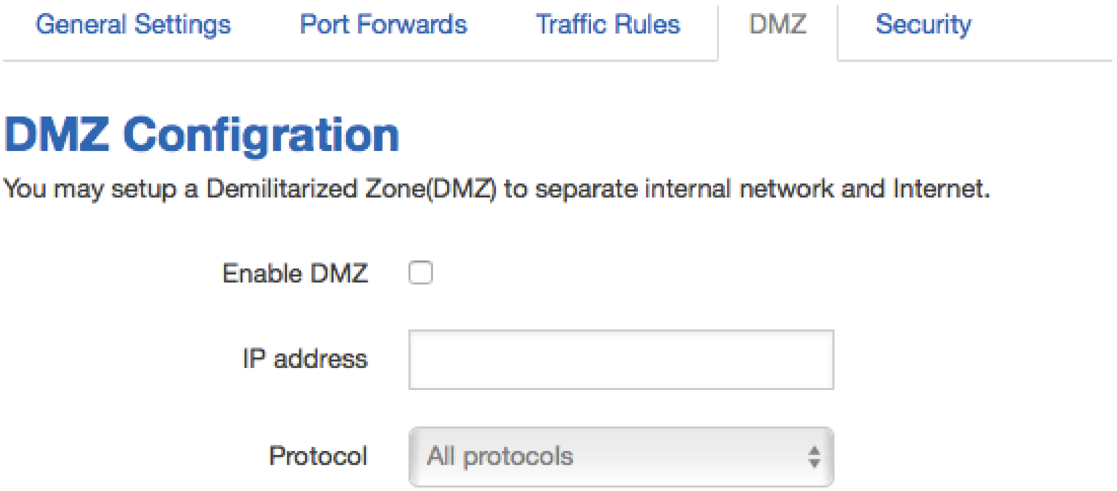
Source MAC address	any
Source address	any
Source port	any
Destination zone	○ Device (input) ○ Any zone (forward) ○ lan: lan: ○ openvpn: (empty) ○ vpnzone: (empty) ◉ wan: wan: wan6: ifmobile: wwan:
Destination address	any
Destination port	any
Action	accept
Extra arguments	

- **Name**: traffic rule entry name
- **Restrict to address family**: IPv4+IPv6, IPv4 and IPv6 can be selected. Specified the matched IP address family
- **Protocol**: specified the protocol matched in this rule. "Any" means any protocol is matched.
- **Source zone**: it is the zone that the traffic comes from.
- **Source MAC address**: traffic rule check if the incoming packet's source MAC address is matched.
- **Source address**: traffic rule check if the incoming packet's source IP address is matched.
- **Source port**: traffic rule check if the incoming packet's TCP/UDP port is matched.
- **Destination zone**: the zone that the traffic will go to.
- **Destination address**: traffic rule check if the incoming packet's destination IP address is matched.
- **Destination port**: traffic rule check if the incoming packet's TCP/UDP port is matched.
- **Action**: if traffic is matched, system will handle traffic according to the Action(accept, drop,

reject, don’t track).

- **Extra argument**: passes additional argument to iptable, use with care!

3.6.8.4 DMZ



DMZ Configration

You may setup a Demilitarized Zone(DMZ) to separate internal network and Internet.

Enable DMZ □

IP address

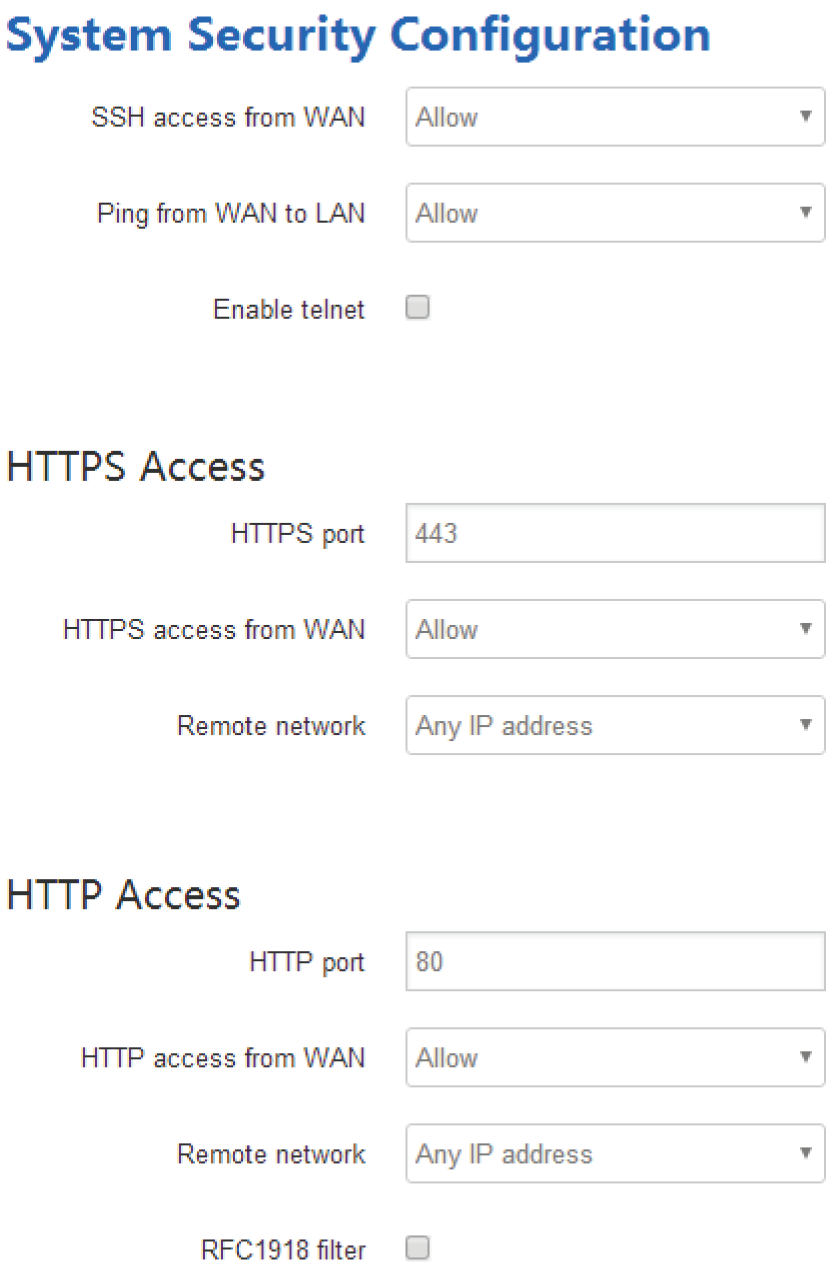
Protocol All protocols

In computer networking, DMZ is a firewall configuration for securing local area networks (LANs).

- **IP Address**: Please Enter the IP address of the computer which you want to set as DMZ host
- **Protocol:** All protocols, TCP+UDP,TCP,UDP.

⚠**Note**: When DMZ host is settled, the computer is completely exposed to the external network; the firewall will not influence this host.

3.6.8.5 Security



System Security Configuration

SSH access from WAN: Allow

Ping from WAN to LAN: Allow

Enable telnet: □

HTTPS Access

HTTPS port: 443

HTTPS access from WAN: Allow

Remote network: Any IP address

HTTP Access

HTTP port: 80

HTTP access from WAN: Allow

Remote network: Any IP address

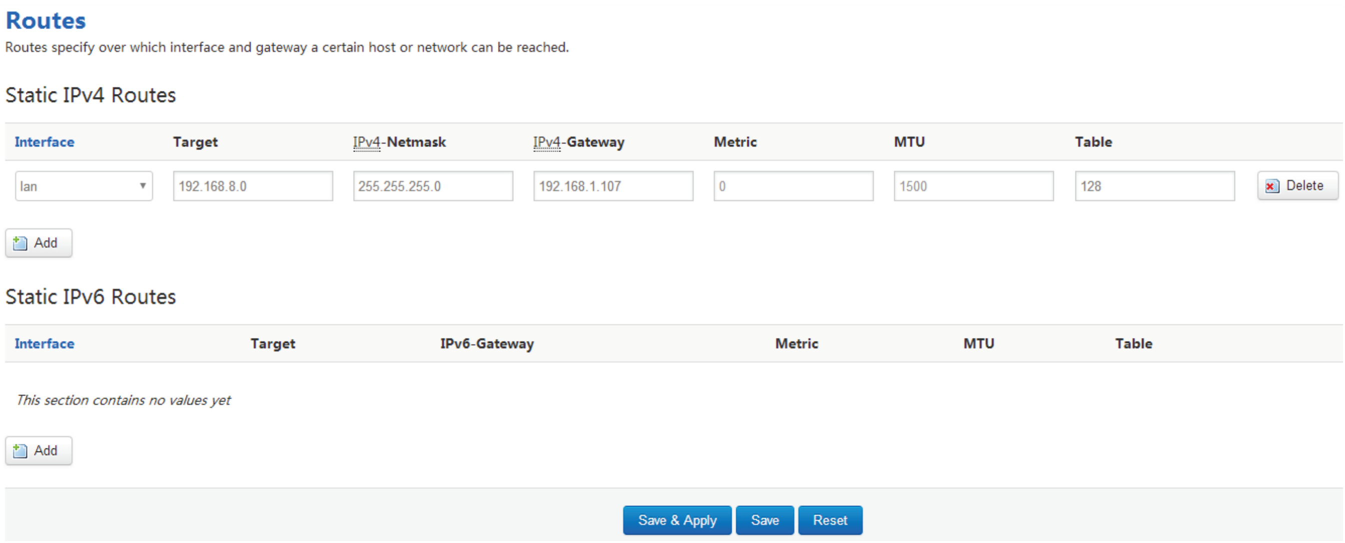
RFC1918 filter: □

- **SSH access from WAN**: allow or deny users access H700/H700 router from remote side.
- **Ping from WAN to LAN**: allow or deny ping from remote side to internal LAN subnet.
- **Enable telnet**: enable telnet connect. The default setting is disabled for security.
- **HTTPS port**: set HTTPS port, the default port is 443.
- **HTTPS access from WAN**: allow or deny access router web management page from remote side.
- **Remote network**: Any IP Address, Single IP address, Subnet.
- **IP address**: fill a remote IP address that can access router web management page.
- **Netmask**: 24 means net mask 255.255.255.0, 32 means 255.255.255.255, the illegal value is

from 1 to 32.

- **HTTP port**: set HTTP port, the default port is 80.
- **HTTP access from WAN**: allow or deny access router web management page from remote side.
- **Remote network**: Any IP Address, Single IP address, Subnet.
- **IP address**: fill a remote IP address that can access router web management page.
- **Netmask**: 24 means net mask 255.255.255.0, 32 means 255.255.255.255, the illegal value is from 1 to 32.
- **RFC1918 filter**: reject requests from RFC1918 IPs to public server IPs

3.6.9 Static Routes



Routes

Routes specify over which interface and gateway a certain host or network can be reached.

Static IPv4 Routes

Interface	Target	IPv4-Netmask	IPv4-Gateway	Metric	MTU	Table	
lan	192.168.8.0	255.255.255.0	192.168.1.107	0	1500	128	Delete

Static IPv6 Routes

Interface	Target	IPv6-Gateway	Metric	MTU	Table

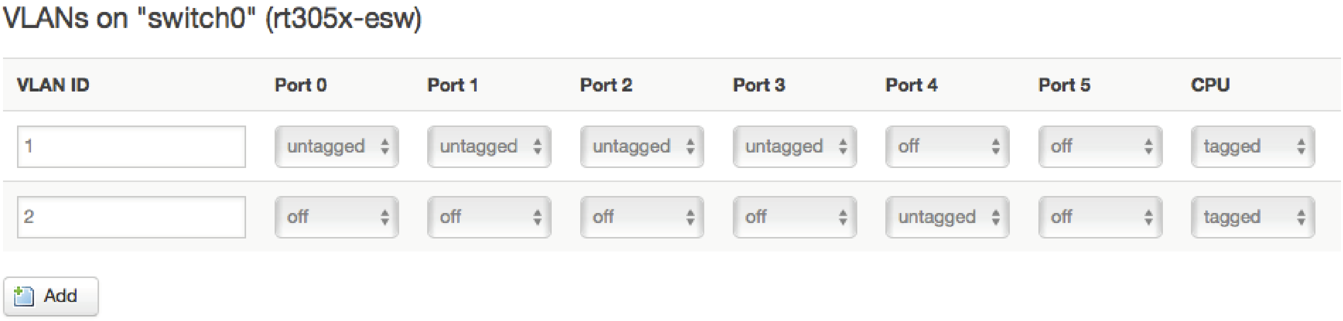
This section contains no values yet

- **Interface:** You can choose the corresponding interface type.
- **Target:** the destination host IP or network.
- **IPv4-Netmask**: the destination IP mask.
- **IPv4-Gateway**: IP address of the next hop.
- **Metric**: used by router to make routing decisions.
- **MTU**: maximum transmission unit
- **Table**: the route table ID, the default value is 254, valid table ID 1-254.

  Notice:

  - Gateway and LAN IP of this router must belong to the same network segment.
  - If the destination IP address is the one of a host, and then the Netmask must be 255.255.255.255.
  - If the destination IP address is IP network segment, it must match with the Netmask. For example, if the destination IP is 10.0.0.0, and the Netmask is 255.0.0.0.

3.6.10 Switch



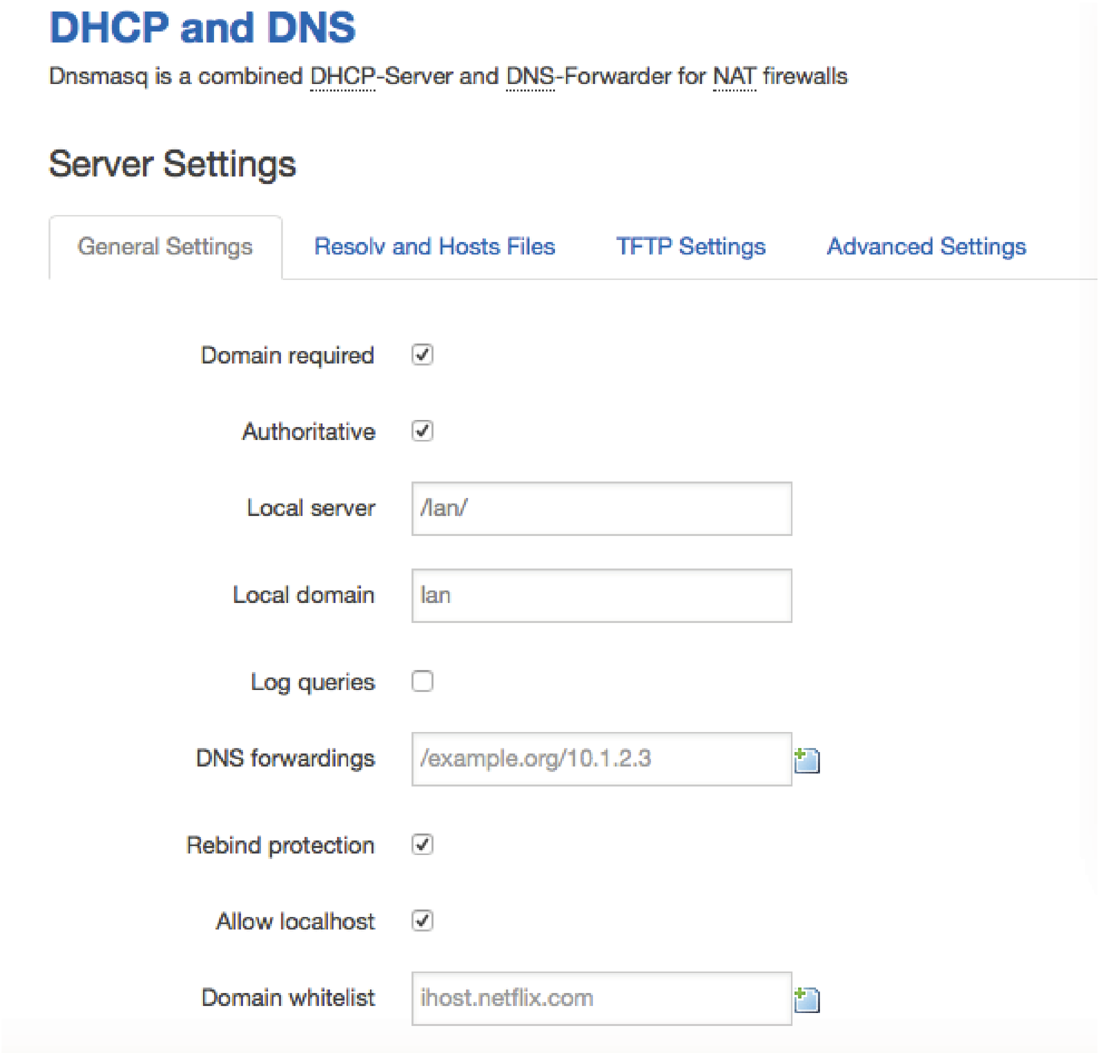
VLANs on "switch0" (rt305x-esw)

VLAN ID	Port 0	Port 1	Port 2	Port 3	Port 4	Port 5	CPU
1	untagged	untagged	untagged	untagged	off	off	tagged
2	off	off	off	off	untagged	off	tagged

⚠**Note**:

1. port 4 is Wired-WAN port, port 0, port 1, port 2, port 3 are LAN port.
2. “Untagged” means the Ethernet frame transmits from this port without VLAN tag.
3. “Tagged” means the Ethernet frame transmits from this port is with VLAN tag.
4. “Off” means this port does not belong to VLAN. For default setting, port 0 belongs to VLAN1, but not belong to VLAN 2.

3.6.11 DHCP and DNS



DHCP and DNS

Dnsmasq is a combined DHCP-Server and DNS-Forwarder for NAT firewalls

Server Settings

Domain required ☑

Authoritative ☑

Local server /lan/

Local domain lan

Log queries □

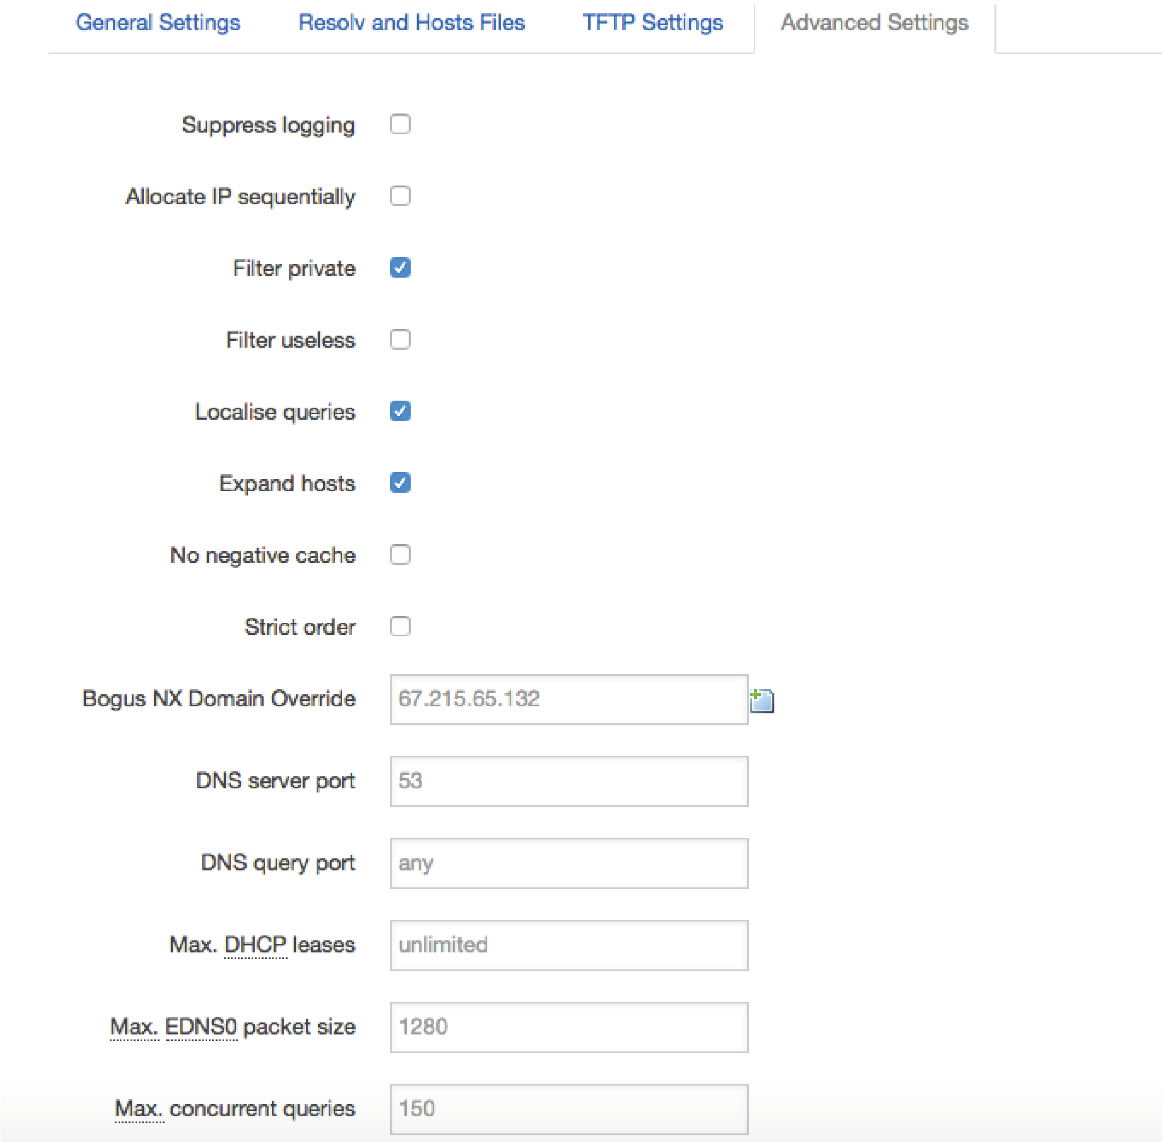
DNS forwardings /example.org/10.1.2.3

Rebind protection ☑

Allow localhost ☑

Domain whitelist ihost.netflix.com

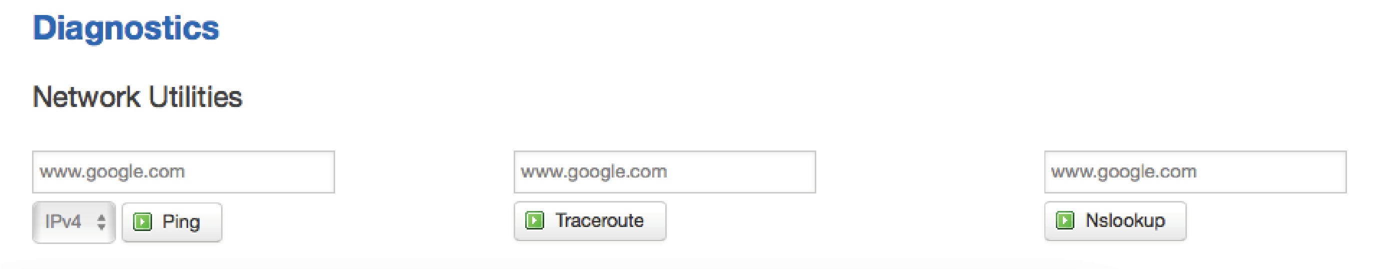
- **Domain required**: don’t forward DNS-requests without DNS-Name.
- **Authoritative**: This is the only DHCP on the local network.
- **Local server**: Local domain specification. Names matching this domain are never forwarded and are resolved from DHCP or hosts files only.
- **Local domain**: Local domain suffix appended to DHCP names and hosts file entries。
- **Log queries**: Write received DNS requests to syslog.
- **DNS forwardings**: List of DNS servers to forward requests to.
- **Rebind protection**: Discard upstream RFC1918 responses.
- **Allow localhost**: Allow upstream responses in the 127.0.0.0/8 range, e.g. for RBL services。
- **Domain whitelist**: List of domains to allow RFC1918 responses for.



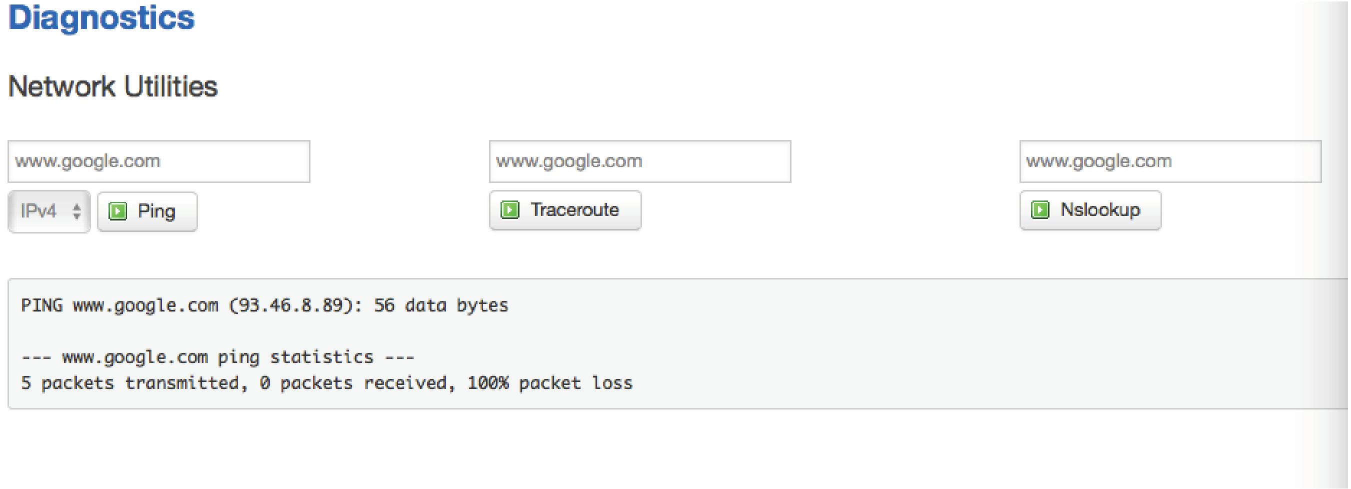
Suppress logging	☐
Allocate IP sequentially	☐
Filter private	☑
Filter useless	☐
Localise queries	☑
Expand hosts	☑
No negative cache	☐
Strict order	☐
Bogus NX Domain Override	67.215.65.132
DNS server port	53
DNS query port	any
Max. DHCP leases	unlimited
Max. EDNS0 packet size	1280
Max. concurrent queries	150

- **Suppress logging**: Suppress logging of the routine operation of these protocols
- **Allocate IP sequentially**: Allocate IP addresses sequentially, starting from the lowest available address.
- **Filter private**: Do not forward reverse lookups for local networks.
- **Filter useless**: Do not forward requests that cannot be answered by public name servers.
- **Localise queries**: Localise hostname depending on the requesting subnet if multiple IPs are available.
- **Expand hosts**: Add local domain suffix to names served from hosts files.
- **No negative cache**: Do not cache negative replies, e.g. for not existing domains.
- **Strict order**: DNS servers will be queried in the order of the resolvfile.
- **Bogus NX Domain Override**: List of hosts that supply bogus NX domain results.
- **DNS server port**: Listening port for inbound DNS queries
- **DNS query port**: Fixed source port for outbound DNS queries
- **Max DHCP leases**: Maximum allowed number of active DHCP leases
- **Max edns0 packet size**: Maximum allowed size of EDNS.0 UDP packets.
- **Max concurrent queries**: Maximum allowed number of concurrent DNS queries.

3.6.12 Diagnostics



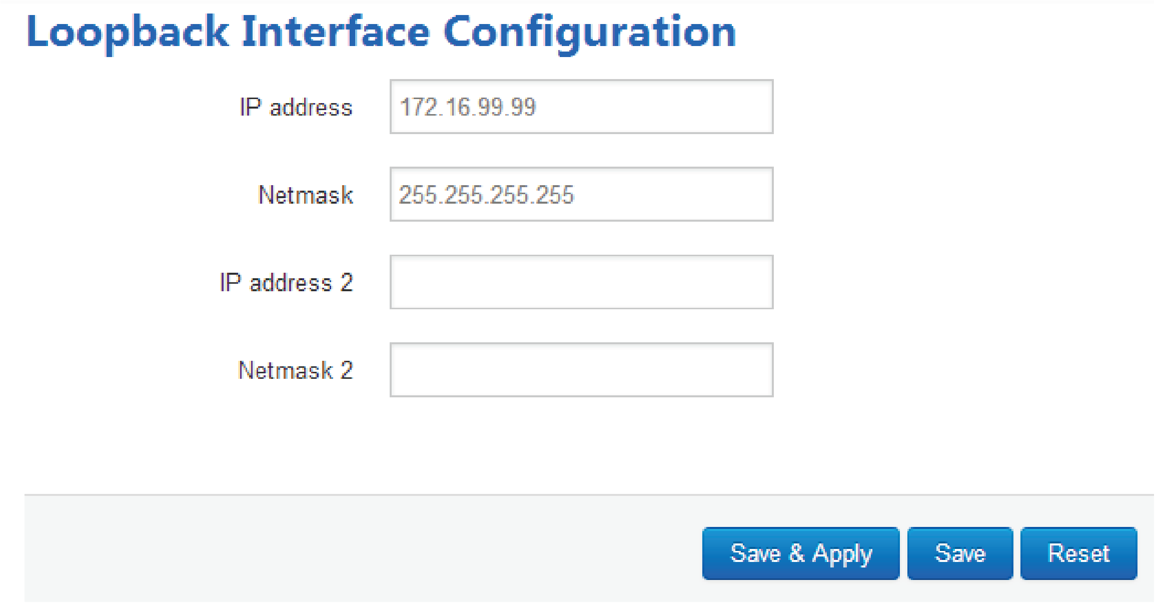
- **Ping** : it is a tool that used to test the reachability of a host on an Internet Protocol (IP) network.
- **Traceroute**: it is a network diagnostic tool for displaying the route (path) and measuring transit delays of packets across an Internet Protocol (IP) network.
- **Nslookup**: it is a network administration command-line tool for querying the Domain Name System (DNS) to obtain domain name or IP address mapping or for any other specific DNS record.
- For example if I want to ping www.google.com, type the target domain name or IP address, then click button “Ping”. Wait couple of seconds, the result will be shown below.



```
PING www.google.com (93.46.8.89): 56 data bytes

--- www.google.com ping statistics ---
5 packets transmitted, 0 packets received, 100% packet loss
```

3.6.13 Loopback Interface



Loopback Interface Configuration

IP address: 172.16.99.99

Netmask: 255.255.255.255

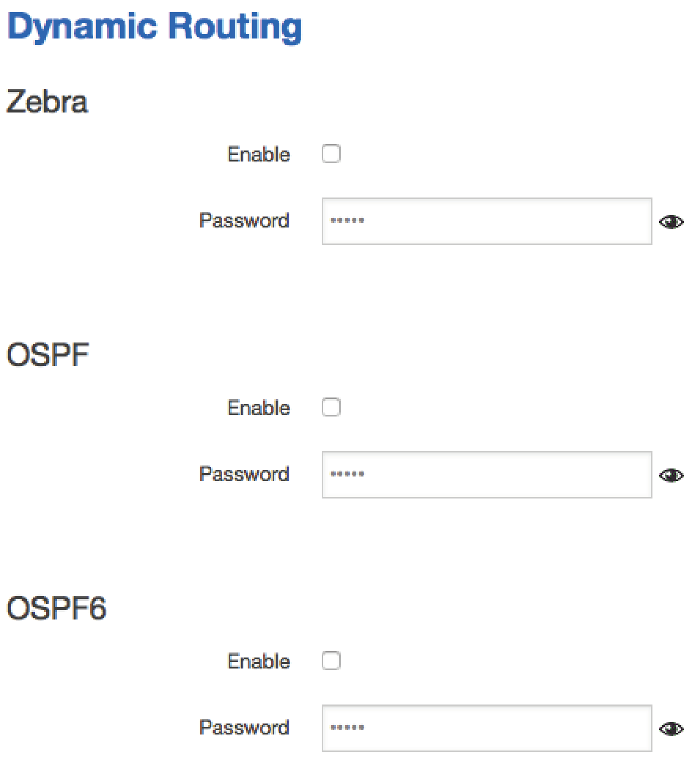
IP address 2:

Netmask 2:

The default Loopback interface has IP address 127.0.0.1, the final user can change it here. The first IP address can be used in IPSec. The secondary can be used as management.

3.6.14 Dynamic Routing

Dynamic Routing is implemented by quagga-0.99.22.4. Dynamic Routing services can be enabled at here:



Dynamic Routing

Zebra

Enable ☐

Password •••••

OSPF

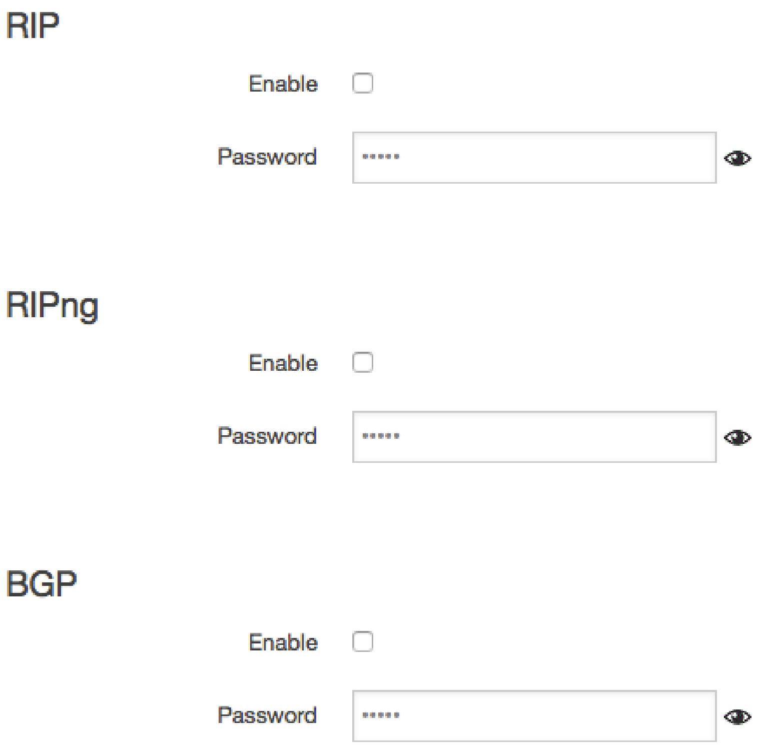
Enable ☐

Password •••••

OSPF6

Enable ☐

Password •••••



RIP

Enable ☐

Password •••••

RIPng

Enable ☐

Password •••••

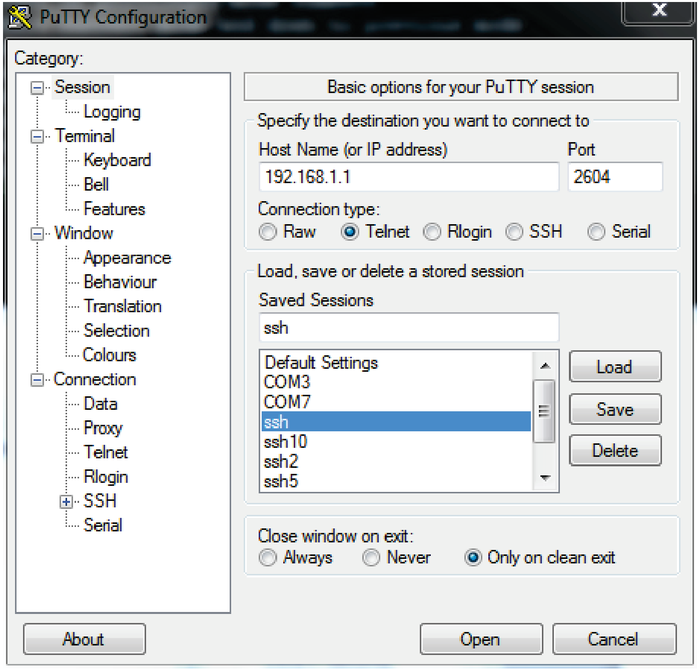
BGP

Enable ☐

Password •••••

- **Zebra**: Zebra is an IP routing manager. Telnet port number is 2601.
- **OSPF**: Open Shortest Path First. Telnet port number is 2604.
- **OSPF6**: Open Shortest Path First for IPv6. Telnet port number is 2606.
- **RIP**: Routing Information Protocol. Telnet port number is 2602.
- **RIPng**: it is an IPv6 reincarnation of the RIP protocol. Telnet port number is 2603.
- **BGP**: Border Gateway Protocol. Telnet port number is 2605.

⚠Note: How to configure these services? For example, the router’s LAN IP is 192.168.10.1. If we want to configure OSPF, we need to set OSPF to “Enable” firstly, then open putty in windows:



Specify the destination you want to connect to

Host Name (or IP address): 192.168.1.1

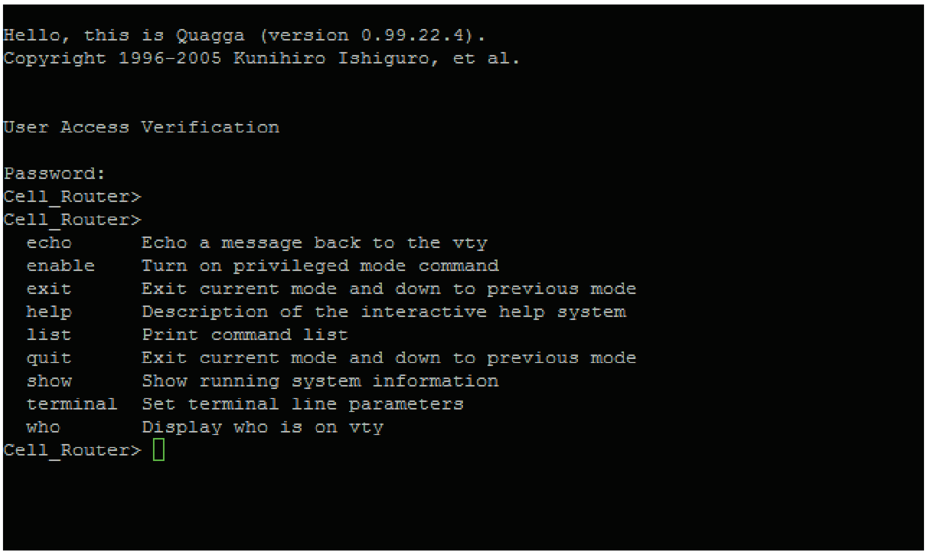
Port: 2604

Connection type: ○ Raw ● Telnet ○ Rlogin ○ SSH ○ Serial

Saved Sessions: ssh

Close window on exit: ○ Always ○ Never ● Only on clean exit

Input the password of OSPF. Then press key”?” for help.



```
Hello, this is Quagga (version 0.99.22.4).

Cell_Router> 
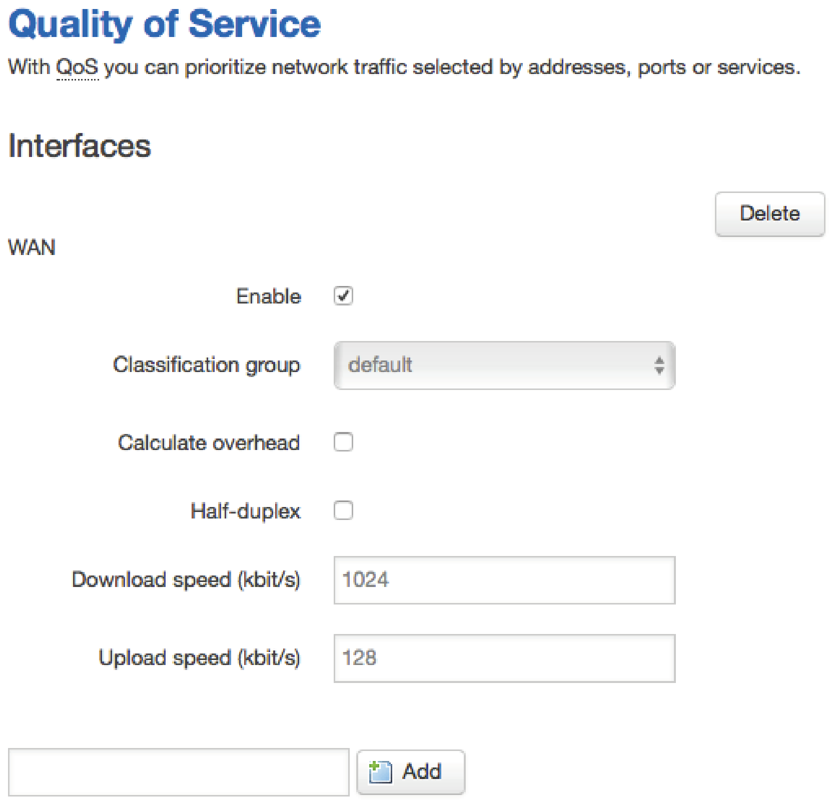
```

3.6.15 QoS

QoS(Quality of Service) can prioritize network traffic selected by addresses, ports or services.



Quality of Service

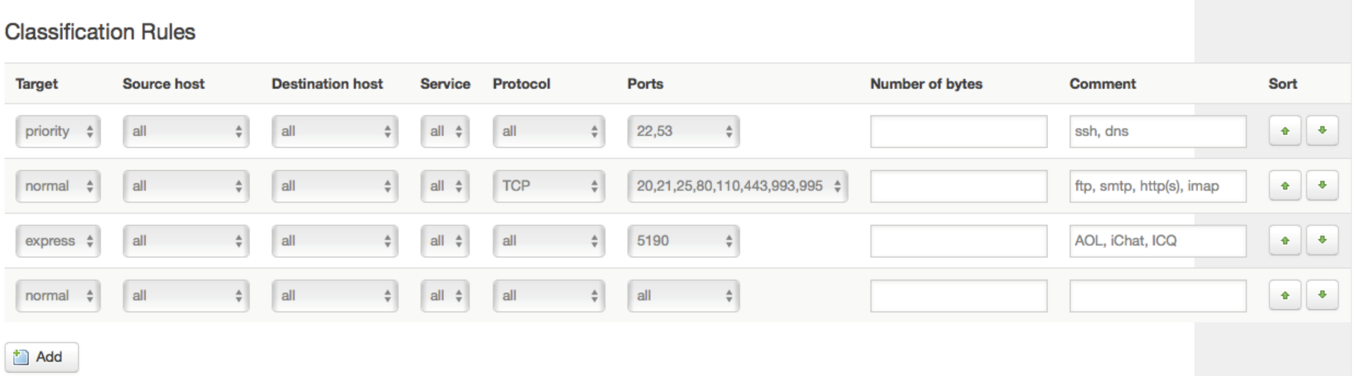
With QoS you can prioritize network traffic selected by addresses, ports or services.

Interfaces

WAN

Enable	☑
Classification group	default
Calculate overhead	□
Half-duplex	□
Download speed (kbit/s)	1024
Upload speed (kbit/s)	128

- **Enable**: enable QoS on this interface.
- **Classification group**: Specify classgroup used for this interface.
- **Calculate overhead**: Decrease upload and download ratio to prevent link saturation.
- **Download speed**: Download limit in kilobits/second.
- **Upload speed**: Upload limit in kilobits/second.



Classification Rules

Target	Source host	Destination host	Service	Protocol	Ports	Number of bytes	Comment	Sort
priority	all	all	all	all	22,53		ssh, dns	↑ ↓
normal	all	all	all	TCP	20,21,25,80,110,443,993,995		ftp, smtp, http(s), imap	↑ ↓
express	all	all	all	all	5190		AOL, iChat, ICQ	↑ ↓
normal	all	all	all	all	all			↑ ↓

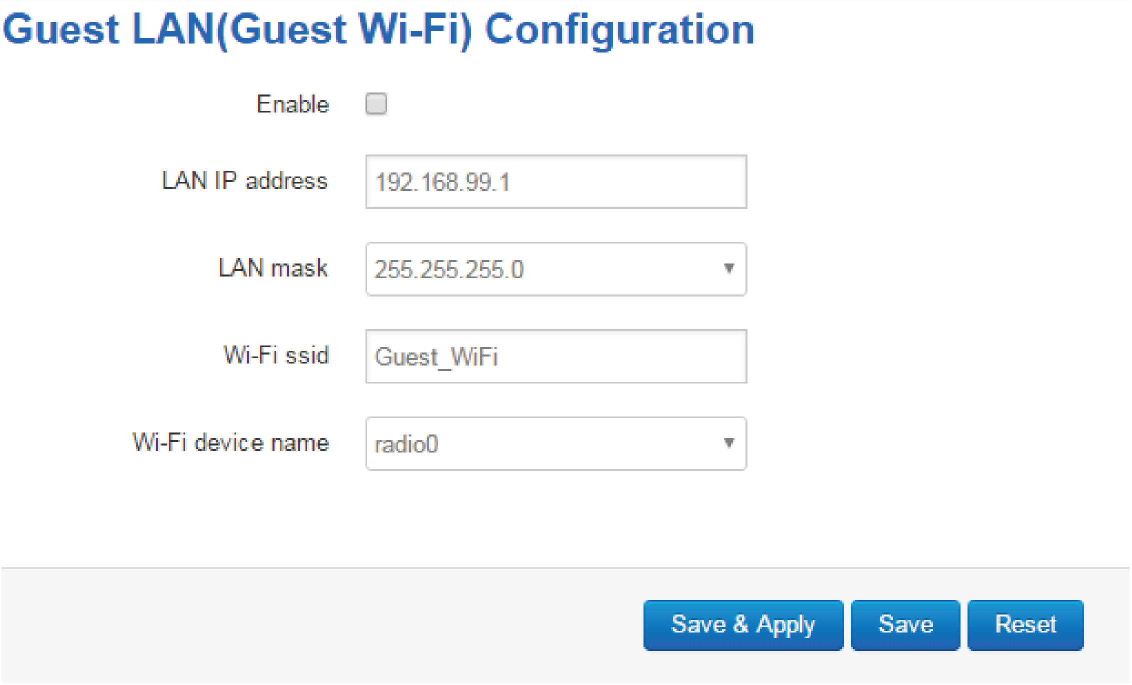
Each classify section defines one group of packets and which target (i.e. bucket) this group belongs to. All the packets share the bucket specified.

- **Target**: The four defaults are: priority, express, normal, low.
- **Source host**: Packets matching this source host(s) (single IP or in CIDR notation) belong to the bucket defined in target.
- **Destination host**: Packets matching this destination host(s) (single IP or in CIDR notation) belong to the bucket defined in target。
- **Protocol**: Packets matching this protocol belong to the bucket defined in target.

- **Ports**: Packets matching this, belong to the bucket defined in target. If more than 1 port required, they must be separated by comma.
- **Number of bytes**: Packets matching this, belong to the bucket defined in target.

3.6.16 Guest LAN(Guest WiFi)

Guest WiFi is a specific WiFi which only can accesses internet bot not local LAN.



Guest LAN(Guest Wi-Fi) Configuration

Enable □

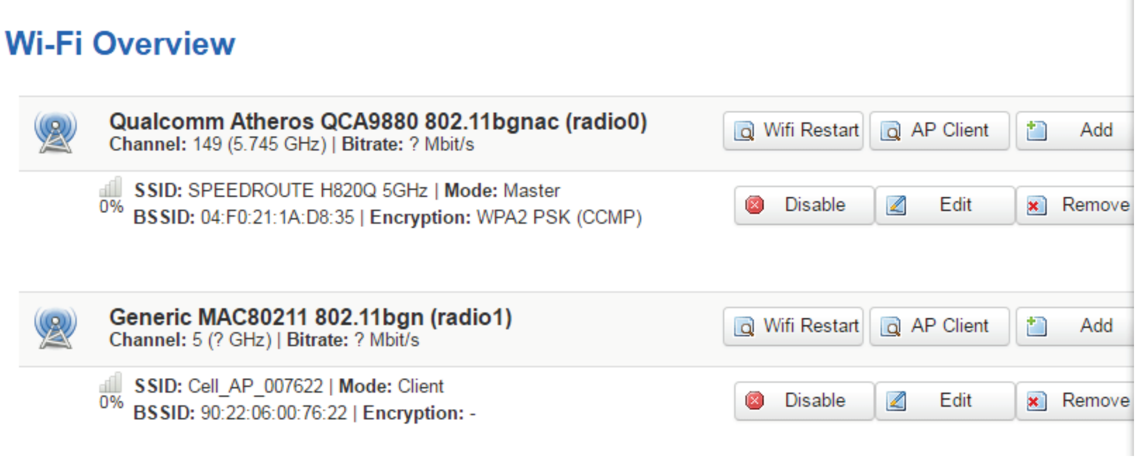
LAN IP address: 192.168.99.1

LAN mask: 255.255.255.0

Wi-Fi ssid: Guest_WiFi

Wi-Fi device name: radio0

- **Enable**: enable Guest Wi-Fi.
- **LAN IP address**: this LAN IP address must be different with the LAN interface IP address.
- **LAN mask**: Packets matching this destination host(s) (single IP or in CIDR notation) belong to the bucket defined in target。
- **Wi-Fi ssid**: the ssid of guest Wi-Fi.
- **Wi-**Fi device name: choose one Wi-Fi device to carry Guest Wi-Fi, the available device name is radio0 and radio1. Check Wi-FI overview page for the device name. for example:



Wi-Fi Overview

Qualcomm Atheros QCA9880 802.11bgnac (radio0)
Channel: 149 (5.745 GHz) | **Bitrate:** ? Mbit/s

0% **SSID:** SPEEDROUTE H820Q 5GHz | **Mode:** Master
BSSID: 04:F0:21:1A:D8:35 | **Encryption:** WPA2 PSK (CCMP)

Generic MAC80211 802.11bgn (radio1)
Channel: 5 (? GHz) | **Bitrate:** ? Mbit/s

0% **SSID:** Cell_AP_007622 | **Mode:** Client
BSSID: 90:22:06:00:76:22 | **Encryption:** -
