

Load Balancing

1. Disable Failover and SIM Switch firstly.

Failover is disabled as default, but SIM Switch is enabled by default.

- a. Goto Services→ Failover to disable Failover.

The screenshot shows the 'Failover Configuration' page with the 'Failover' tab selected in the sidebar. The main area displays 'Failover Settings' with 'Enable' unchecked and 'Back To High priority' checked. Under 'Primary Configuration', the 'Primary' dropdown is set to 'Wired_wan'. Other settings include 'Host1 to ping' (empty), 'Host2 to ping' (empty), 'Ping timeout' (1), 'Max Retries' (10), and 'Interval between ping' (30).

- b. Goto Network→ Mobile → SIM Switch, set “Enable SIM switch” to unchecked. And click button “Save & Apply”

The screenshot shows the 'Cell Switch Configuration' page with the 'Mobile' tab selected in the sidebar. The 'General' tab is active. Under 'SIM Switch', the 'Master SIM' dropdown is set to 'SIM 1'. The 'Enable SIM switch' checkbox is unchecked. In the 'Switch Rules' section, several checkboxes are available: 'On Time', 'On ICMP check', 'On signal strength', 'On dial fail', 'On data limit', and 'Switch to master', all of which are currently unchecked.

2. Open page Network → Load Balancing. Load Balancing is disabled by default.

3. Goto Configuration → Interface page.

Interface	Enabled	Tracking IP	Tracking reliability	Ping count	Ping time	Ping timeout	Interface down	Interface up	Metric	Errors	Sort
wan	Yes	8.8.4.4 8.8.8		2	1	2s	5s	3	8	—	
wwan	No	8.8.8.8		1	1	2s	5s	3	8	—	
ifmobile	Yes	8.8.8.8		1	1	5s	30s	3	8	11	
ifmobile2	Yes	8.8.8.8		1	1	5s	30s	3	8	12	

There are 4 default interfaces. Wan is wired wan, wwan is wifi client, ifmobile is cell 1 interface. Ifmobile2 is cell 2 interface.

The metric of ifmobile and ifmobile2 are set to 11 and 12.

The default metric for wan and wwan are 0. If we want to add wan or wwan into Load Balancing, we must modify default metric to other value rather than 0.

4. Edit interface ifmobile. Click button “Edit” behind ifmobile. Set “Enabled” to checked to use this interface in Load Balancing. After configuring is done, click button “Save & Apply”.

MWAN Member Configuration

Members

Members are profiles attaching a metric and weight to an MWAN interface
Names may contain characters A-Z, a-z, 0-9, _ and no spaces
Members may not share the same name as configured interfaces, policies or rules

Member	Interface	Metric	Weight	Sort	Edit	Delete	
wan_m1_w3	wan	1	3				
wan_m2_w3	wan	2	3				
wifi_client_m1_w3	wwan	1	3				
cell_m1_w3	ifmobile	1	3				
cell2_m1_w3	ifmobile2	1	3

General Interfaces Members Policies Rules

MWAN Policy Configuration

Policies

Policies are profiles grouping one or more members controlling how MWAN distributes traffic
Member interfaces with lower metrics are used first. Interfaces with the same metric load-balance
Load-balanced member interfaces distribute more traffic out those with higher weights
Names may contain characters A-Z, a-z, 0-9, _ and no spaces. Names must be 15 characters or less
Policies may not share the same name as configured interfaces, members or rules

Policy	Members assigned	Last resort	Errors	Sort	
balanced	wan_m1_w3 cell_m1_w3 cell2_m1_w3	unreachable (reject)

wan_m2_w3
wifi_client_m1_w3
cell_m1_w3
cell2_m1_w3

9. Remove member cell_m1_w3 by click  after "cell_m1_w3". And new member cell_m1_w2 by click .
10. Now we have 3 members in this policy, interfaces distribute more traffic out those with higher weights. Now wan and ifmobile2 have weight 3,ifmobile has weight 2.that means if all 3 interfaces are online, then wan and ifmobile2 has 3/8 traffic out, ifmobile has 2/8 traffic out .
Notice: all member in the same policy for Load Balancing should have same metric. Otherwise Load Balancing will use lower metric firstly.
11. Goto Configuration → Rules to edit default_rule

MWAN Rule Configuration

Traffic Rules

Rules specify which traffic will use a particular MWAN policy based on IP address, port or protocol
 Rules are matched from top to bottom. Rules below a matching rule are ignored. Traffic not matching any rule is routed using the main routing table
 Traffic destined for known (other than default) networks is handled by the main routing table. Traffic matching a rule, but all WAN interfaces for that policy are down will be blackholed
 Names may contain characters A-Z, a-z, 0-9, _ and no spaces
 Rules may not share the same name as configured interfaces, members or policies

Rule	Source address	Source port	Destination address	Destination port	Protocol	Sticky	IPset	Policy assigned	Errors	Sort
default_rule	—	—	0.0.0.0/0	—	all	No	—	balanced	—	—
